A SERIES OF AUTOMATIC DEVICES FOR MAGNETIC FIELD SUPPRESSION. [1960] 14p. 9 refs.
C. E. Trans. 1584; M2061.
Order from LC or SLA ml\$2. 40, ph\$3. 30 61-13420

Trans. of Elekt[richeskiye] Stantsii (USSR) 1959, v. 30, no. 9, p. 48-54.

Automatic field suppressors of the new series have massive main contacts with silver mating surfaces and reliable mechanical and arc suppressing systems. They are not polarized, and they can be connected for operation without a preliminary forming. The suppressors of the new series for large machines are connected to both poles of the excitation circuit. This increases the reliability of field suppression and sometimes makes it possible to abandon a second device for field suppression, in the excitation circuit of the exciter. The duration of field suppression is determined mainly by the damping time of eddy currents, excited (Engineering--Electrical, TT, v. 5, no. 2) (over)

DESCRIPTORS: *Clouds, *Noctilucent clouds,
Atmospheric condensation, Dusts, Theory,

The dust hypothesis, explaining the noctilucent cloud
occurrence by the accumulation of meteor dust parti-
cles or of volcanic matter, is being met with serious
objections. The condensation hypothesis, on the con-
trary, explains not only the altitude limitation of
noctilucent clouds, and the constancy of their altitude,
but also their connection with meteorological phenom-
(Earth Sciences--Meteorology, TT, v. 11, no. 4)(over)
