A new index is suggested for the diffusion behavior of
claddings. It is shown mathematically that the curve
 $d = f(t)$ as a rule is a parabola. After prolonged
periods of heating, it may be approximated by its
tangent. The penetration depths at various tempera-
tures on the silver side are determined for the pairs of
metals Ag/Al, Ag/Zn and Ag/Cd. In the pair of metals
Ag/Zn, a swelling of the intermediate layers formed
