Cabane, M.
THE ROLLING OF CONTINUOUSLY CAST BILLETS
OF SPECIALITY STEELS. [1962] [12]p. 62-10742
Order from SLA \$1.60

Trans. of Revue de Metallurgie (France) 1961, v. 58
[no. 8] p. 661-665.

DESCRIPTORS: Steel, Casting, *Cast steel, Rolling
mills, *Steel castings, Production.

A major problem created by continuous casting is its
adaptation to existing steelplant processing equipment
and procedures. There appears to be no basis for ob-
jection to the use of continuously cast material in the
rolling operations. On the contrary, the use of con-
tinuous cast material makes possible the more effec-
tive and profitable usage of rough-shaping and sur-
face conditioning operations. The rolling operation is
also made easier by the use of continuously cast
material. (Author)

POLYCONDENSATION OF HALOTEREPHTHALIC
ACIDS WITH ETHYLENE GLYCOL. [1962] 13p. (figs.
tables omitted) 11 refs.
Order from SLA \$1.60

62-16262

Trans. of Soc[été] Chimique de France. Bulletin,
1956, no. 8/9, p. 1234-1238.

DESCRIPTORS: Halogen compounds, *Phthalic acids,
Condensation, Polymerization, Molecular weight,
*Glycols, *Ethylenes.

The polycondensation of haloterephthalic acids with
ethylene glycol leads to polymers endowed with a fila-
ment property, the melting point of which is lower, the
greater the dissymmetry introduced into the nucleus of
the terephthalic acid. Moreover, it appears that the dif-
ference in reactivity of ortho- and meta-carboxyls of
the halogens influences the reaction which, depending on
the case at hand, leads to more or less high polymers.
