DESCRIPTORS: *Bromides, *Chlorides, *Copper com-
pounds, *Vapor pressure, Molecular association.

The boiling-point method and the saturation method were
used to determine the saturation vapor pressure of
copper bromide in the 400° to 800°C range. Comparison
of the experimental data obtained by these two methods
indicates that cuprous bromide is present in the vapor
as the trimer Cu_3Br_3 , at temperatures above 450°C.
Below this temperature further association of the
