DESCRIPTORS: *Porous materials, Production,
*Sponges, Expanded plastics, *Refractory materials,
Polymers, Beryllium compounds, Structures, Manu-
facturing methods.

The invention consists of a process for the manufacture
of porous parts according to which a spongy piece of the
communicating cell type is impregnated with a suspen-
sion or a dispersion of refractory particles in a liquid.
The part formed is treated in order to eliminate the
liquid and the material constituting the sponge and the
refractory particles are agglomerated by calcination.
