Trans. of Akademiya Nauk SSSR. Doklady, 1957,
v. 114, no. 6, p. 1203-1205.

It is shown that the decrease in photoelectric current
in the fundamental absorption of the lattice in the CdS
single crystals is due to the decrease in the efficiency
of producing the photoelectric carriers but not because
of the drop in the natural lifetime of the carriers.
