Trans. of Uspekhi Nauchnoy Fotografii (USSR) 1957,
v. 5, p. 182-192.

The wetting property of surface-active compounds,
that is, of wetting agents when emulsions are coated
on a flexible support, was studied. As a result, a
mechanism of kinetic wetting and the anti-repellent
effect of wetting agents for coating the films with
emulsions was suggested and some relationships were
determined between these properties and the struc-
ture of the wetting agents. (Author)
