THE RELATIONSHIP OF MITOCHONDRIA TO MA-

Order from SLA mi\$2.40, ph\$3.30 61-10760

Trans. of Arztliche Forschung (West Germany) 1960,
v. 14, no. 9, p. 454-460.

Oxidation-reduction processes in the cell are closely
bound to the presence and activity of mitochondria.
Among the fundamental characteristics of malignant
tissues is a markedly reduced oxidation capacity.
The number of mitochondria in neoplastic cells
amounts to about one fourth of that found in normal
cells. Theoretically the use of mitochondria, which
have been shown to be capable of extracellular life in
vitro and which could be obtained in large amounts,
might represent an ideal therapy.
