Trans. of Elektrichestvo (USSR) 1959, no. 6,  
p. 71-76.

Tests showed that dynamic forming of anode foil for  
electrolytic capacitors by ac is best carried out with  
the baths cross-connected. Baths of existing con-  
struction are suitable provided that they are made of  
material not subject to forming (for example, stain-  
less steel grade 1Kh18N9T). The greatest stability of  
forming conditions is achieved when the same foil is  
passed through successive baths connected back to  
back.
