Information based mainly on Russian experience and theory, is surveyed under the following chapter headings: (1) Basic data on the cutting process; (2) elementary cutting; (3) sharpness and durability of the tool; (4) interaction between cutter and wood; (5) general problems of chip formation during the cutting of a homogeneous, isotropic material; (6) chip formation during the cutting of wood across the grain; (7) chip formation during wood cutting along the grain; (8) chip formation in end-grain cutting of wood; and (9) the effect of various factors (i.e., forces acting on the tool, mechanical properties of the wood, the species of wood, wood moisture, width of the workpiece, the sharpness of the angle of the tool, the degree of blunt-
