Trans. of Sovetskaya Meditsina (USSR) 1949 [v. 13]

DESCRIPTORS: Antigens, Antibodies, *Immunology,

infections.

The actinolyase introduced intracutaneously shows a
good therapeutic effect in the majority of forms of
actinomycosis in the presence of a clear skin-allergy
reaction in the patient. The proposed method gives not
only a good therapeutic effect, but also good cosmetic
results. (Author)

THE DIFFERENTIAL DIAGNOSIS BETWEEN MALIGNANT AND BENIGN GASTRIC ULCERS BY EMPLOYING THE PENICILLIN TEST. [1962] [8]p.

DESCRIPTORS: Diagnosis, *Peptic ulcers, *Cancer, Stomach, Tests, *Penicillins, Therapy, Gastro-intestinal system, Ulcers.

Since no absolute methods of differentiating benign gastric ulcers from those having undergone malignant transformation, this problem is usually resolved by a process of prolonged dynamic study with conservative therapy which, at times, can result in the wait having been too disastrously long. The distant or late results in the 3 cases of trans-thoracic esophago-gastrostomy performed for cardiac spasm were good. There must be taken into account the fact that a portion of the stomach has been moved into the pleural cavity. Remembering this, will help in preventing such diagnostic errors as pleurisy and, if effusion does develop, complication of pleural puncture can be prevented.
