In the polymerization of isotactic polymeric propylene,
with the $\text{Al}(\text{C}_2\text{H}_5)_3$ - σ - TiCl_3 catalytic system, the
chain transfer process, the rate of which is a function
of the square root of the concentration of alkylalumi-
num, introduces $-\text{C}_2\text{H}_5$ terminal groups into the poly-
meric chains which remain, for the most part, bound
to aluminum. With the variation of the concentration of
alkylaluminum, a variation in the number of $-\text{C}_2\text{H}_5$

DESCRIPTORS: *Propenes, *Polymers, Viscosity,
Molecular weight, *Organic solvents, *Benzenes,
*Toluenes, *Cyclohexanes.

Viscometric measurements were made on dilute solu-
tions of fractions of atactic polypropylene of known
molecular weight, in cyclohexane, toluene, and benzene
at 30°C, and in isomyl acetate at 34°C. The relation
between intrinsic viscosity and molecular weight, which
was thus determined for each of the four solvents,
which are endowed with rather different solvent power,
