v. 11, no. 2, p. 131-163. (Abstract available)

DESCRIPTORS: \*Filters (Electromagnetic wave),  
\*Electric filters, \*Signal-to-noise ratio, Seismic waves,  
Geophysical prospecting.

The theory of filters that may separate events with  
different apparent velocities (fan filters) is studied.  
The filtering operator is determined from the two-  
dimensional spectrum (in frequency - wave number  
space) of such filters. Practical use of fan filters for  
signal enhancement is described, as well as possible  
changes in field techniques, which might be necessary  
for convenient and efficient fan filtering. (Author)
