 Order from SLA \$1.10 62-20073

Trans. of Minerva Chirurgica (Italy) 1954, v. 9,
 no. 10, p. 488-490.

DESCRIPTORS: Anesthesia, *Anesthetics, *Electro-
 sleep, Electric currents, Barbiturates, Toxicity,
 Low frequency, Surgery.

An electric method of producing surgical anesthesia by
 low-frequency and low-intensity alternating current
 is described. The method consists in increasing the
 current very slowly after the test animal has been
 prepared with barbiturates. It is believed that it is a
 question of exciting the diencephalic sleep center. By
 reducing the excitation of the motor and tonic centers

[no. 25] p. 1132-1134.

DESCRIPTORS: *Drugs, Silicon compounds, Skin,
*Ointments, *Antibiotics, *Healing, Surgery,
*Silicones.

In treatment of various ailments requiring protection of the skin from moisture or from contact with pathological fluids, or to prevent irritation or mortification, the use of silicone ointments fully meets the need. Even when a state of mortification is in progress their use (best with the type containing antibiotics) stops the mortification process in a short time, sometimes within 24 hours, and causes it to regress, thus facilitating spontaneous healing of the skin (Biological Sciences--Pharmacology, TT, v. 8, no. 7)
