Aberg, Ewert, Knutsson, Gunnar, and Roland, Magnus.
EFFECTS OF TRICHLOR ACETIC ACID ON WEEDS
AND CROPS. [1963] 16p. 10 refs.
Order from SLA \$1.60

63-14351

Trans. of Växtodling (Sweden) 1952, v. 7, p. 11-24.

DESCRIPTORS: *Chlorine compounds, *Acetic acids,
Acetates, Sodium compounds, *Grasses, *Herbicides,
Sprays.

Experiments with trichloroacetic acid, chloral hydrate
and sodium trichloroacetate show that the preparations
can be used to combat quack grass but not against
dicotyledonous weeds. Against a stand of quack grass
100 kilograms per hectare (2.47 acres) must be used,
while quack grass in newly plowed or tilled ground can
be killed with 50 kg/ha. The best effect of the chemicals
is obtained when they are applied during the summer,
(Agriculture--Plant Cultivation, TT, v. 10, no. 5) (over)
