CPCI Test and Verification

Based on FSD experience on recent large programs. Test and verification activity for software CPCIs has been observed to follow the average productivity rates in the table below.

Test Man-Months Required per Line of Code (LC)

<u>CODE TYPE</u>	<u>LC/MM</u>
New	1500
Modified	2500
Converted	3500
Retained	0

Using these rates and using estimated line-of-code counts for D/C Segment, the testing effort for each CPCI was calculated. Another estimating relationship - that testing and verification should run approximately 20% of the software development effort - was calculated for each CPCI and used as a basis for checking reasonableness. To arrive at the level 3 CWBS estimates, the CPCI test and verification manpower was further spread in accordance with the following table based on historical actuals.

<u>Plans</u>	<u>Procedures</u>	<u>Test and Verify</u>	<u>Report</u>
15%	35%	45%	5%

Figures 3, 4 and 5 following summarize these data for the application CPCIs for the BOC, IOC and FOC phases respectively. Detailed rationale sheets which are included in this appendix provide man month data at WP level 3 in accordance with the rationale stated above.
