15 JUL 1983

MEMORANDUM FOR: Comptroller

FROM: Harry E. Fitzwater
                 Deputy Director for Administration
SUBJECT: Reprogramming of FY 1983 Funds

1. It is requested that you authorize the Office of
Security to reprogram a total of $256K from fan 710103 to
meet the following critical requirements:

   ° $130K to fan 710513: These funds are
   necessary to upgrade the Office of Security's
   Headquarters Security Branch communications
   network. The existing equipment, which supports
   the entire Headquarters area, to include the
   DCI Protective Staff, Security Duty Office, and
   Federal Protective Officers, is over 11 years
   old. A key component of the network - the
   repeater   STAT
   is over 10 years old. Radio reception with either
   FPO's or Office of Security personnel en route to
   and upon arrival at Agency outlying buildings is
   either poor or nonexistent. The   STAT
   vehicle, which transports large amounts of nego-
   tiable instruments, is frequently out of radio
   contact due to the many "dead spots" in the
   Washington metropolitan area. In short, the
   system is unreliable, frequently needs repairs,
   and "bleeds" over into other networks.

       A dependable two-way radio communications
   network is an essential ingredient in the Office
   of Security's ability to provide the necessary
   level of security protection to the DCI and to
   the Agency's Headquarters compound and outlying
   buildings. Procurement of this badly needed
   equipment would also enable the Office of Security
   to significantly expand the range within which
   this network operates, and would reduce and/or
   eliminate the many "dead spots" which now exist.

It should be noted that funds for this communications upgrade are budgeted for within an Office of Security FY 1985 New Initiative, but this New Initiative is now ranked at a level that its survivability is doubtful.

° $126K to fan 71106: These funds are required to procure a Wang Alliance System for the Office of Security⎵⎵⎵⎵⎵⎵⎵⎵⎵⎵⎵⎵⎵⎵⎵⎵⎵⎵ plus one master CPU and workstation for the Office of Security's Security Records Division (SRD). The Wang System ⎵⎵⎵⎵⎵⎵⎵ would be networked over an encrypted line to SRD, and would thus allow real-time transmission of investigative reports and/or other types of information between Headquarters and ⎵⎵⎵⎵ The utilization of the Wang Alliance System is a proven means of increasing productivity and, linked to Headquarters, would significantly improve the timeliness with which these reports are submitted to the Office of Security. This improved timeliness, when combined with the known increase in productivity which Wang has demonstrated in the word processing arena, would be of tremendous benefit to the Office of Security in fulfilling its background investigative requirements for applicant and industrial case processing. The establishment of this initial Wang network ⎵⎵⎵⎵⎵⎵ would be a first step in the Office of Security's long-range goal of fully utilizing available automated data processing equipment to increase production and reduce case processing time.

2. The funds for the above two important acquisitions for the Office of Security would be reprogrammed from existing funds within fan 710103 which supports the Community-Wide Computer-Assisted Compartmentation Control System (4C). All FY 1983 tasks within this fan pertaining to 4C's implementation have been completed, and the reprogramming authority requested herein would not adversely affect any facet of the 4C Program.
