Subject: CAMS2 (P/S) Project Staffing

Dear 

My letter to you of 13 March 1983 referenced the vigorous activity, on the part of both our staffs, to obtain the additional staff required for the CAMS2 Project. As subsequently reported to you on 29 March, the critical staff, particularly the necessary programmers, have now been identified. Further, due entirely to your exceptional support in arranging for optimum processing of security access requests, the new staff additions are being briefed into the project even in advance of the plan.

We are not unmindful of the extraordinary efforts extended by many within the agency, both on your staff as well as in other Offices, in response to your call for special security processing of new CAMS2 staff. We recognize too, some of the hardships incurred by other projects as a result of the decision to give favored status to CAMS2's current staffing needs; it is our intent to ensure that such consideration is not needed again, either for CAMS2 or any other contracts. On behalf of the CAMS2 leadership, and also

 please accept our appreciation for both your continuing personal support, and the above-and-beyond help to the project's security clearance needs provided by so many in the past few weeks; please extend our sincere thanks to all participants. I again assure you, and your associates, of our total commitment to CAMS2; we will fully honor the trust you have placed in us, particularly as manifest by the special security arrangements you have effected in support of the project staffing requirements.

Sincerely,

Vice President and General Manager  
Systems Engineering and Applications Division
