

7 March 1967

MEMORANDUM FOR: DDI Review Team

1. The attached papers are for our meeting at 1300 on Tuesday, 7 March, in the DDI conference room. The first two pages summarize the 20 recommendations that are DDI action, characterize each as Major (that is, implementation has a fundamental bearing on other recommendations, or in the case of No. 23 concerns a discrete problem of major dimensions) or Minor (that is, the recommendation is a detail or represents a second order of business), and indicate whether the recommendation is acceptable to the DDI and whether it has been considered necessary to restate the wording of the original recommendation.

2. You are receiving the entire package so that 1) you can review the entire range of recommendations, as well as the ones for which you were responsible, and 2) you can consider again whether there are deficiencies or problems not covered by the existing recommendations and for which additional recommendations should be formulated.

3. In the pages on the individual recommendations, the first column states the original recommendation of the IG report, the center column contains a proposed restatement, and the third column gives background and rationale.

4. You will note that the restated recommendation is sometimes different from that which we discussed. This is the result chiefly of trying to make sure that the recommendations interrelate properly. Please come prepared with new language where you think that is necessary.
