Title : An Experiment in Reconstructing the Low-Value Forests of
Azerbaijan.

Orig Pub : Sots. s. kh. Azerbaijan, 1957, No 9, 47-49.

Abstract : A description is given of an experiment being conducted
by the Scientific Research Institute of Forest Economy of
Azerbaijan (since 1954) on reconstructing the low-value
plantations in the lowlands and mountain regions of the
Republic by using such valuable tree species as Greek
walnut, persimmon, long-legged oak, common ash, edible
chestnut, apricot, etc. The trees were sown or planted
under the following conditions: in a naturally thinned
forest, in a forest which was thinned both naturally and
artificially by opening supplementary "windows" with a

"Solution of the Equations of Sloping Cylindrical Shells," Azv AN Azerb. SSR, No 1, 1954, pp 3-13 (Azerbaydzhani resume)

In an earlier work (DAN AzSSR, No 3, 1951), the author had reduced Vlasov's equations for sloping cylindrical shells of arbitrary configuration to one equation with constant coefficients. In the present article, the author seeks the approximate solution to a boundary value problem for a shell in which a series of coefficients can be expressed as polynomials. He derives a system of linear equations for these polynomials.

AUTHOR: Akhund-Zade, M. Yu.; Tagiyev, I. G.

TITLE: New approximate method of solution of the equilibrium equations of the arbitrary shallow shells

SOURCE: AN AzerbSSR. Izv. Seriya fiziko-matemat. i. tekhnich. nauk, no. 4, 1963, 127-134

TOPIC TAGS: thin shallow shell, Vlasov moment theory, linked equation system, / spherical shell, cylindrical shell, arbitrary shallow shell, small parameter expansion method

ABSTRACT: In proposing an approximate method for solving equilibrium equations for an arbitrary shallow shell, the authors take as their basis a system of equilibrium equations for shallow shells in accordance with V. Z. Vlasov's moment theory (V. Z. Vlasov "Izbrannyye Trudy" (Selected Works), Vol. 1, 1962) which is represented in the following expression:

$$\left. \begin{aligned} \nabla^2 \nabla^2 \varphi - E h \nabla^2 w &= 0 \\ \nabla^2 \nabla^2 w + \frac{1}{D} D^2 \varphi &= \frac{2(\alpha, \beta)}{D} \end{aligned} \right\}$$

Card 1/2

ACCESSION NR: AP3013507

where E, h, D are constant values respectively for modulus of elasticity, thickness and cylindrical rigidity of the shell, and φ and w are stress and normal displacement functions. After necessary transformations, the following equation is derived:

$$\Lambda(L) + i\lambda \frac{\partial^2 t}{\partial \xi^2} = r_0 \left[\frac{\partial^2 (\rho q_0)}{\partial \eta^2} + \frac{\partial q_2}{\partial \eta} - \frac{\partial q_1}{\partial \xi} \right], \quad \lambda = \frac{\sqrt{12} r_0}{h}$$

In the case of shallow cylindrical shells, equations (2) can be simplified by dropping the terms containing the coefficients $1/r_0^2$ and $1/r_0^3$. Existing methods for solution of equations for spherical and circular cylindrical shells can be used for the obtained linked equation system with given boundary values. Orig. art. has: 27 equations.

TITLE: Optical absorption, reflection, and dispersion of GaS and GaSe layer crystals

SOURCE: Physica status solidi, v. 15, no. 2, 1966, K109-K113

TOPIC TAGS: gallium optic material, crystal optic property, Brillouin zone, exciton absorption

ABSTRACT: Optical reflection absorption and dispersion in GaS and GaSe single crystals were measured with a quality prism spectrometer at near normal incidence. The respective spectra are shown in figures 1, 2 and 3. The sharp decrease in absorption at 618 mμ is attributed to exciton absorption. The increase in reflection with wavelength at 484 mμ for GaS and 618 mμ for GaSe was caused by multiple reflections within the crystals. The possibility of a relationship between the reflection peaks and certain transitions in the Brillouin zone is discussed. The authors thank Prof. G. B. Abdul-layev and Dr. F. M. Gashinizade for their help. Orig. art. has: 4 figures, 1 formula. [14]
