The operation consists of the circular insertion of a thin fascial strip round the anus, both ends of the strip are fastened to the gluteal muscles, whose contraction brings about adequate closure of the intestine. Three such operations are reported. Although 2 cases developed limited wound suppuration, the operation was successful in all the 3 cases, and the patients could retain stools and wind. This operation, which has unfortunately been forgotten to some extent, should be more widely used.

TITLE: Comparison of the mean characteristics of extensive atmospheric showers with nuclear cascade avalanches, calculated under various assumptions regarding nucleon-nucleus interactions

SOURCE: Yadernaya fizika, v. 4, no. 3, 1966, 578-584

TOPIC TAGS: nucleon interaction, cosmic radiation

ABSTRACT: Experimental data on extensive atmospheric showers are compared with calculations of nuclear cascade avalanches for three different assumptions concerning the character of the elementary interaction between a nucleon and a nucleus of an atom in the atmosphere fluctuations of the shower production height and the complex composition of the primary cosmic radiation are taken into account in calculations of the mean characteristics. Among the considered models for interaction of the nucleon - nucleus of atmospheric atoms the two-fireball model results in the least disagreement with experiments. Orig. art. has: 4 figures and 3 tables. [JPRS: 38,764]

TITLE: Influence of pre-treatment of seeds with N-substituted chloracetamides on the growth and development of Lutescens-62 wheat

SOURCE: Khimiya v sel'skom khozyaystve, v. 4, no. 7, 1966, 18-19

TOPIC TAGS: wheat, N-substituted chloracetamide/Lutescence-62 wheat chemical compound

ABSTRACT: Results are given of experiments made to study the effect of preliminary soaking before sowing of Lutestseus-62 wheat seeds in water solutions of N-substituted chloramide compound which are obtained from ketones and monochloreacetic acid. Small doses of these solutions have been found to stimulate plant growth. Observations made over a period of two years showed that the compounds had a favorable effect on the germination, growth and development of the wheat, both in the laboratory and in the field. All phases of development of

Title : Watering the Fig Tree in Tashkentskaya Oblast'.
(Polivy inzhira v Tashkentskoy oblasti).

Orig Pub : Sots.s.kh. Uzbekistana, 1957, No 4, 55.

Abstract : At the horticultural sovkhos "Vrevskiy No 9" in Chirchikskiy Rayon, Tashkentskaya Oblast', in 1954-55, 4 and 9 waterings in the period from 9 May to 9 Sept. were tried out on the Kadota and Chapla fig varieties. It was established that under the conditions prevalent in Tashkentskaya Oblast' with a deep ground water stand on the sierozem soils the fig should be given during its period of vegetation 4-5 waterings at a rate of 800 cubic meters per hectare and 1-2 winter waterings each at 1000 to 1200 cubic meters per hectare.

TITLE: Effect of spin-phonon interaction on the paramagnetic resonance spectrum

PERIODICAL: Fizika tverdogo tela, v. 4, no. 6, 1962, 1604-1607

TEXT: The shift of the paramagnetic resonance lines owing to spin-phonon interaction is calculated with the temperature Green functions. This is the most convenient method of calculating the magnetic susceptibility, the imaginary part of which is responsible for the dissipation of electromagnetic energy in a paramagnetic. Quantitative estimates show that the shift can be observed and may give important information on the spin-phonon interaction. It is noted that the change in structure of the levels of the spin system may be due not only to thermal phonons but also to sound and electromagnetic waves.

TITLE: Theory of spin-lattice relaxation in paramagnetic ion crystals

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 42, no. 3, 1962, 783 - 786

TEXT: It was the aim of the author to show that if the phonon end-point energy is greater than the Stark splitting of the levels of paramagnetic ions, the two-phonon transition probability in second perturbation-theoretical approximation can be expressed through the single-phonon transition probability to an intermediate level. For the model

level energy differences being $\Lambda \gg \Delta$, the $n \rightarrow k$ transition probability is calculated for an ion, allowing for spin-phonon interaction. The processes causing this transition are considered separately. The single-phonon transition probability is given by
