✓1954. Anostylevsky, P. Analysis of continuous beams considering settlement of supports (in Russian), *Iskust. i nauka. Razv.* *Constr.* 7, 1, 149-161, Mar. 1954.

Continuous beams with two, three, and four spans are analyzed considering settlement at various supports. Method analogous to that of three-moment equations (of least work) is used, and a particular case with two unknown moments are introduced. Moment coefficients for uniformly and partial uniform loads are calculated for simple and fixed end conditions. Reference is made to published works by B. D. Anostylevsky and V. N. Shchegolev. J. E. Kulik, L. A.

The Control of the Self Ignition Delay and of the Fuel Combustion
in Compression-Ignition Engines on the Basis of the Kinetics of
Chemical Reactions (Part I)

veloping with respect to the combustion processes within the engine. The authors state that the classical conception had not paid sufficient attention to the mechanism of ignition by compression. Some authors, such as King affirm that a thermal decomposition of the hydrocarbons takes place, leading to the formation of carbon nuclei and skeletons. Socolic and other authors have recommended, the authors write, studying the complex process of delayed ignition in its various successive phases. The theory of Socolic is described. Based on recent research, the improvement of the combustion process is centered especially on the reduction of the ignition delay. The control of the burning process is analyzed. The main difficulty consists in the fact that no diesel fuels exist that respond to multiple contradictory requirements. Such fuels appear to be impossible to obtain. ✓

"Experimental Studies on Hepatic Clearance in Irradiated Dogs"

Bucharest, Revista Sanitara Militara, Vol 16, Special No., 1965; pp 512-513

Abstract: In dogs irradiated 200 or 300 r, hepatic clearance of colloidal gold 198 or rose bengal iodine-131 was delayed. Whole-body radiation (400 r) effect on renal uptake of chromium-51, arsenic-75, sodium-24 and potassium-42 was also studied.

- 65 -

burned and irradiated animals. The study, which used 100 mature rats, showed that the protected animals, especially those irradiated with 400 roentgen units, showed a more attenuated evolution of the disease and a somewhat smaller intensity of histological lesions. The difference between the protected and the irradiated animals and the controls was not significant. Includes 7 figures, 2 tables and 12 references, of which 5 Rumanian, 2 Russian and 5 Western. -- Manuscript submitted 19 July 1965.

TITLE: Studies on the determination of serum bilirubin by rapid methods

SOURCE: Revista sanitara militara, v. 61, no. 1, 1965, 103-107

TOPIC TAGS: serum, hematology

ABSTRACT: The authors compared four rapid method of determining serum bilirubin without specialized laboratory equipment, and conclude that 2 methods are clearly superior to the others, namely the methods proposed by Fouchet and by Gramasevskalaia and Cetto. All of these methods are rapid, accurate, simple, and require little serum. Orig. art. has: 1 table. [JPRS]

Title : Neutitis Treatment with The Soviet Preparation of Dibasol.

Orig Pub : C"brem. meditsina, 1955, 6, No 8, 100-103

Abstract : 16 patients with motor and sensory neutitis due to streptomycin, were treated with dibasol (I) in the course of 10 days with a daily dose of 5 mg. The beneficial effect of treatment is shown after the 5th-6th administration of I. In 8 patients there occurred a restitution of the damaged functions, in 5 the results were incomplete, but satisfactory, and in 3 the I proved ineffective. In the author's opinion I is an effective preparation for the prophylaxis and treatment of motor and sensory streptomycin neurites. In motor neuritis the results of

"Medico-Social Problems of Alcoholism in Bulgaria"

Sofia, Suvremenna Meditsina, Vol 17, No 1, 1966, pp 50-58.

Abstract: A trend towards increasing consumption of alcohol in Bulgaria during recent years is noted: the average consumption per head of population increased during 1959-63, reaching 51. per yr. in 1963. A study conducted among miners of the Pernik and Rhodopa regions showed that there was a slight correlation between alcohol consumption and productivity, professional qualifications, and age; a moderate correlation between alcohol consumption and political activity, appetite, health, and frequency with which the worker sought medical help; and a pronounced correlation between alcohol consumption and the amount of sleep. The amount of alcohol consumed was found to increase with the income of the miners. Measures which should be taken to combat alcoholism are discussed: creation of a special organization for this purpose is advocated. Graphs and tables. Ten references (5 Bulgarian, 1 USSR, 1 Polish, 3 Western). Russian and English summaries. Manuscript received Mar 65.

TOPIC TAGS: photographic material, map, aerial photograph

ABSTRACT: A study is made of the investigation conducted in 1961 by Glavleskhoz RSFSR on the accuracy of photomaps composed without the development of phototriangulation networks using gyrostabilized (at angles of inclination no greater than 20-40') aerophotographs, and radio-altimeter and statoscope readings. In the investigations, the error in the determination of photography altitude was assumed to be $\pm 5m$, and the excesses of the locality points $\pm 20m$. It is established from the results of field tests that the accuracy of the photomaps (scale 1:10,000) composed of gyrostabilized aerophotographs using radio altimeters is higher than that of photomaps of the same scale composed on the
