Moscow. Tsentral'nyy institut prognozov

Voprosy sinopticheskoy meteorologii (Problems in Sinoptic Meteorology)  
Leningrad, Gidrometeoizdat, 1957. 129 p (Series: Its Trudy,  
vyp. 52) 1,100 copies printed.

Sponsoring Agency: Glavnoye upravleniye gidrometeorologicheskoy  
sluzhby pri Sovete Ministrov SSSR

Ed. (Title page): Tomashevich, L. V.; Ed. (inside book):  
Pisarevskaya, V. D.; Tech. Ed.: Soloveychik, A. A.

PURPOSE: The collection of articles is intended for employees of  
the meteorological service as well as for those interested in  
the activities of the Central Institute of Forecasting.

COVERAGE: The collection of articles analyzes the causes of incorrect  
short-term weather predictions and explains the nature of the  
errors.

Problems in Sinoptic Meteorology

360

TABLE OF  
CONTENTS:

Isayeva, Ye. N. Nature of Errors in Weather Forecasting  
in the Summer of 1954

3

In 1954, weather forecasting in Moskovskaya Oblast' fell short of expectations, being correct to only 73.5 percent as against a 72 percent average for the entire year. The author examines each individual cause of error and concludes that precipitation, temperature, and especially errors in forecasting the baric field of a low gradient were the deciding factors in faulty predictions. The author explains how incorrect analysis of air stratification or one of developing fronts affects the forecasting. There are 3 tables and no references.

Bachurina, A. Analysis of the Incorrect Weather Forecast  
for May 31, 1954.

9

Card 2/8

Problems in Sinoptic Meteorology

360

The forecast for this particular date was rain at night and cool during the day. The prediction was based on the observed cyclogenesis by night (and early in the morning) on May 30. The enclosed maps show: 1) weather conditions at 3 o'clock a.m. on May 30 2) thermal and baric conditions at 6 o'clock a.m. on May 30 3) forecast for 3 o'clock a.m. for May 31 4) actual weather situation at 3 o'clock a.m. on May 31. The prediction failed: there was no rain by night and the temperature on May 31 was 22° C. The error was due to incorrect forecasting of baric pressure; this is illustrated by two additional maps. There are 5 maps and no references.

Mertsalov, A. N. Two Cases of Convective Rain

15

The article discusses two cases of erroneous weather prediction in Moskovskaya oblast' for July 29 and 30, 1954 due to convective rain. On July 28 in the evening, the prediction for the following day was no rain. This prediction was repeated the next morning. Nevertheless, it rained heavily with precipitation

Card 3/8

Problems in Sinoptic Meteorology

360

mounting to 35.2 mm. The prognostics for July 30 read: scattered showers. In fact, it rained throughout the entire Moskovskaya oblast' with precipitation ranging from 8 to 18.9 mm. As a cyclone was moving westward covering the whole oblast, the rainfall was caused by convective instability. Because of an incorrect diagnosis of the baric field on the eve of the rainfall, the movement of the cyclone was not predicted in the forecast. There are 12 synoptic maps illustrating the above two cases and 3 Soviet references.

Isayeva, Ye. N. Analysis of the Erroneous Weather Forecast for July 28, 1954

31

The forecast for Moskovskaya oblast' for this date was rain. The error was caused by incorrect prediction of the movement of a cyclone approaching Moscow from the Baltic area. Two maps show the baric pressure near the surface and the thermal and baric situations on the morning of July 27. The author explains the mistake made in the analysis of this situation and shows how and why the expected cyclone by-passed Moscow. There are two synoptic maps, 1 table and no references.

Card 4/8

## Problems in Sinoptic Meteorology

360

Tomashevich, L. V. Analysis of the Erroneous Weather  
Forecast for May 2, 1954

35

The Moscow forecast for this date, confirmed on the morning of May 2nd read: partially cloudy, no rain, with daily temperature of 20 to 22°C. The error was caused by an unexpected retardation in the movement of two warm fronts from the South, which produced rain and with it a drop in temperature to 10°C. There are 3 synoptic maps and 2 Soviet references.

Bachurina, A. A. Analysis of the Incorrect Weather Forecast  
for June 26, 1954

40

The Moscow forecast for this date read: some cloudiness, no rain, daily temperature from 22 to 27°C. This was confirmed on the morning of June 26th. The error was due to incorrect evaluation of the factors causing precipitation. The capital was hit by torrential rains and the rain was persistent. Evolution of the zone of rain progressed from the direction of Card 5/8

Problems in Synoptic Meteorology

360

Smolensk but this had not been foreseen by the forecast service.  
There are 6 figures, 2 tables and no references.

Gorodova, M. I. Storm on July 4, 1954

47

The storm was not predicted in the morning forecast for Moscow. The synoptic map for this day was made at 3 o'clock in the morning. Although a slowly moving anticyclone was expected to reach the area of Moscow some time in the afternoon, no immediate rain was predicted. Nevertheless, the storm came at 5:30 a.m. and lasted until 11 a.m. The storm resulted from instability produced by the advection of saturated air, while the adiabatic gradient created conditions for convective rain. There are 7 drawings, 2 tables and 3 Soviet references.

Card 6/8

Problems in Sinoptic Meteorology

360

analyzes the total distribution of rainfall throughout the entire oblast from the point of view of both intensity and occurrence. The author refers to previous attempts by I.I. Kasatkin to sum up the distribution of rainfall in the area of Moscow. The article includes a map of all meteorological stations in the oblast and draws general conclusions as to the amount of rainfall from both frontal zones and air masses. In the appendix there are tables showing maxima of precipitation under various synoptic situations (ridge, cold front, anticyclone, depression, etc.) and a listing of average monthly rainfall observed at each station. There are 9 maps, 16 tables, and 6 Soviet references in the text and 5 tables in the appendix.

Abs Jour : Ref Zhur - Biol., No 1, 1958, No 1789

over. The first grafting is done, when the plant has reached 15-20 cm. The study of fig reproduction was accomplished at the testing station in the village of Sadovo. The agrotechny applied is described. The creeping plants are formed in the shape of a double-shoulder cordon. The bearing of fruit starts in the second to third year.

Title : Absorption of Sulfur Dioxide in Solutions of Basic  
Aluminum Sulfate. VII. Mass Transfer Coefficient.

Orig Pub : Przem. chem., 1956, 12, No 1, 35-41

Abstract : Determination of approximate values of overall mass-transfer coefficient  $k_p$ , and also of partial mass-transfer coefficients  $k_g$  in gas film, and  $k_c$  in liquid film, in process of sulfur dioxide absorption in solution of basic aluminum sulfate. It was found that the rate of absorption depends on values of both partial coefficients. It follows therefrom that resistances of gaseous and liquid films are quantities of same order.  
Communication VI see RZhKhim, 1957, 63039.

Title : Absorption of Sulfur Dioxide in the Solutions of Basic  
Aluminum Sulfate. VIII. Absorption in a Packed Column.  
IX. Determination of Mass Transfer Coefficient in Liquid  
Phase

Orig Pub : Przem. chem., 1956, 12, No 2, 83-86; No 9, 515-519

Abstract : VIII. Measurements of the rate of absorption of  $\text{SO}_2$  by  
basic solutions of aluminum sulfate in a column packed with  
Raschig rings. It was established that values of the over-  
all mass transfer coefficient  $K_p$  depend on the concentration  
of  $\text{SO}_2$  in a gas, wetting density, and the values of  $Re$ .  
Values of  $K_p$  increase with the decreased concentrations of

Title : The Determination of Lead in the Presence of Barium,  
Using Mercaptobenzothiazole

Orig Pub : Croat Chem Acta, 30, No 2, 135-139 (1958)

Abstract : A modification of the method of Spak and Kurash Spaak and Kurash?/ (Z analyt Chem, 102, 24 (1935)) have been used for the determination of Pb(2+) in the presence of Ba(2+). A boiling aqueous solution of Pb salt is treated with a freshly prepared 1% solution of mercaptobenzothiazole (1 gm reagent and 20 gms NH<sub>4</sub>NO<sub>3</sub> in 100 ml 2.5% NH<sub>4</sub>OH) and the white precipitate which separates out is filtered through a 1G3 crucible, washed with NH<sub>4</sub>NO<sub>3</sub>

Card 1/2

YUGOSLAVIA / Analytical Chemistry--Analysis of inorganic

solution (100 gms NH<sub>4</sub>NO<sub>3</sub> in 1 liter 2.5% NH<sub>4</sub>OH), dried at 110°, and weighed. The presence of a 100-fold excess of Ba(2+) does not interfere. The results of the analysis are affected by the length of time the solution with the precipitate is left to stand before filtration, the temperature of the solution during filtration, and the dilution of the solution with water. -- N. Turkevich

the new phase decreases gradually with the rise of the II concentration and with time, and aluminum hydroxide is precipitating. This is explained by structural changes, during which hydro-complexes convert into tetrahydrooxometa-aluminate with separation of OH<sup>-</sup>, and later into polyaluminate Al<sub>n</sub>(OH)<sub>3n</sub>. The concentration of various ions depends on the Al O and Na O concentrations and on the alkalinity modulus (Na<sub>2</sub>O/Al<sub>2</sub>O<sub>3</sub>). The equilibrium shifts to the hydrocomplex side at a high alkalinity modulus and to the polyaluminate side at a low one.
