Requirements as to magnetic ...

cavity resonator is considered first. At its input are bunched accelerated particles, the states of which in the phase plane evenly fill-in the whole region of constant acceleration. When the phase and the amplitude of the filled-in cavity are changed, this region of stable acceleration is deformed and shifted and some particles are out of this region. If x is the ratio of the accelerated particle current in a disturbed regime to that of being accelerated according to theoretical conditions, this ratio remains unity for the calculated value of phase, when the amplitude of the field u increases from its calculated value u_0 with the corresponding synchronous phase φ_{s0} . When u decreases from u_0 to $u_0 \cos \varphi_{s0}$. (Ref. 4: A.P. Fedotov, B.K. Shembel', Radiotekhnika i elektronika, 1961, 6, 1, 108)

$$x \approx 1 - \frac{1}{1 - \cos \varphi_{s0}} \cdot \frac{\Delta u}{u_0}, \quad (1)$$

where $\Delta u = u_0 - u$. For $u \leq u_0 \cos \varphi_{s0}$ the acceleration becomes im-

Requirements as to magnetic ...

possible. It can also be shown that with constant amplitude of the field

$$\mu \approx 1 - \left| \frac{\Delta \varphi}{3 \varphi_{s0}} \right| \quad (2)$$

holds. Equating (2) and (1)

$$\frac{\Delta u}{u_0} = \frac{1 - \cos \varphi_{s0}}{3} \frac{\Delta \varphi}{\varphi_{s0}} \quad (4)$$

is obtained. E.g. for three wing cavity resonators of an accelerator with $\varphi_s = 30^\circ$ and assuming losses to be 20 %. The obtained values of allowable instabilities are minimum because an even distribution of particles was assumed in the region of stable acceleration. In fact, as the velocity of particles increases, the "density" of their states at the fringe of stable acceleration becomes smaller than that at the center. The author acknowledges the help of B.K. Shembel'. There are 4 references: 3 Soviet-bloc and 1 non-Card 3/4

TOPIC TAGS: micrometer, inductive transducer, laboratory instrument, FERRO MAGNETIC MATERIAL, permeability

ABSTRACT: An inductive transducer is suggested as an ¹⁴instrument for contactless ferromagnetic-product size control (see figure).

The transducer impedance depends on the measuring gap, permeability of the gap, and permeability of the specimen (product). As only oil or cooling liquid fills the gap, their permeability being close to that of air, the gap permeability variations introduce a negligible error. The transducer sensitivity to the gap size is

Card 1/2

UDC: 681.2:531.71

L 34866-66

ACC NR: AP6014524

made much higher than its sensitivity to the specimen permeability, thus reducing the second source of error. In addition, tuning the circuit in resonance is recommended for enhancing the sensitivity to thin specimens. The guaranteed measuring span is 300—900 μ with a scale factor of 5 μ . TITLE: The Terminology of Semiconductor Electronics

PERIODICAL: Izvestiya vysshikh uchebnykh zavedeniy, Radiotekhnika, 1959, Vol 2, Nr 4, pp 490-491 (USSR)

ABSTRACT: The author states his opinion on the article by T.M. Agakhanyan, B.N. Kononov, I.P. Stepanenko, titled "The Terminology in the Field of Transistor Electronics", published in Izvestiya vysshikh uchebnykh zavedeniy, Radiotekhnika, 1958, Nr 4, Vol 1, p 496. He says that a standardization of semiconductor electronics is necessary and that problems connected with it must be discussed. He presents some of his ideas concerning a list of terms proposed by the authors of the aforementioned article. He divides his suggestions into two sections: 1) the transistor as an electronic device, and 2) the transistor as a circuit element. He agrees with the designation "tranzistor" (transistor) for a controlled semiconductor device. The term "poluprovod-

TITLE: Modification of the structure and properties of polyolefins. Effect of radiation on ethylene-propylene copolymers

SOURCE: Plasticheskiye massy, no. 8, 1966, 58-60

TOPIC TAGS: irradiation effect, electron radiation, copolymer, ethylene, propylene, radiation chemistry

ABSTRACT: The effect of irradiation with fast electrons (2.0-2.2 MeV) on the structure and properties of ethylene-propylene copolymers (EPC) was studied on films of these copolymers (50 μ thick) containing 7 mole % propylene (EPC-7) and stabilized with the heat and light stabilizers "P-24" phosphite and 2-hydroxy-4-alkoxybenzophenone. The irradiation effect was determined from the solubility of the films, given by the content of the soluble sol fraction extracted with boiling o-xylene. The cross-linking produced by the electrons decreases the crystallinity of the copolymer: the degree of crystallinity, determined by x-ray diffraction, decreased with increasing irradiation dose, but there was no appreciable change in the fusion temperature. A study of the change in physicomechanical characteristics showed the specific elongation at rupture to decrease (particularly at 50 Mrad) and the ultimate tensile strength to fall off

4

slightly with increasing dose. The most significant change occurs above the melting range of the film: at 135°C, the initial film has no strength of extension at all, whereas the irradiated film has a strength of extension of about 10 kg/cm². The degree of unsaturation of the copolymer increases substantially with increasing dose up to 100 Mrad, and approaches a constant value with further increase in dose. The main type of unsaturation are the trans-vinylene groups (R-HC=CH-R'). The irradiated copolymer samples oxidize rapidly in air, and IR spectra show an increase in the concentration of carbonyl groups. In conclusion, authors thank A. V. Lysov, S. A. Subbotkin, A. S. Andreyev and A. M. Khomyakov for their assistance in the irradiation of the samples. Orig. art. has 5 figures.

TITLE : Preliminary Data on the Treatment of Some Mental Diseases with Meratran
ORIG. PUB. : Zh. nevropatol. i psikhologii, 1958, No 5, 592-599
ABSTRACT : The administration of 1 mg of meratran (M) to healthy patients (21) produced in 14 persons an improvement of the general feeling, euphoria, disinhibition, slowing of the pulse rate, tachypnea and an increase of vascular reflexes. 2 mg of M caused impairment of the general feeling,
