Title :

The Study of the Body Forms of the Pinzgau Cattle in the District of Dolny Kubin by the Biometric Method. Part I. The Study of the Adult Cattle.
(Issledovaniye form tela pintsgauskogo skota v rayone Dol'nyy Kubin biometricheskim metodom. Ch.I. Issledovaniye vzroslogo skota).

Orig Pub : Polnohospodarstvo, 1957, 4, No 3, 443-493.

Abstract : The results of the measurements of 1,480 cows, 64 oxen, and 5 bulls, are given. On the basis of statistical processing of numerical data, the following average indexes were obtained (in cm.): for cows 6-12 years old - height at the withers 120.09 (103-137); length of the body 144.91 (125-174); circumference of the shin

Translation from: Referativnyy zhurnal, Metallurgiya, 1958, Nr 1, p 257 (USSR)

AUTHOR: Chomova, N.G.

TITLE: Dispersion Hardening Alloys With Low Thermal Coefficients of the Modulus of Elasticity (Dispersionno-tverdeyushchiye splavy s malym temperaturnym koeffitsiyentom modulya uprugosti)

PERIODICAL: Sb. tr. Tsentr. n.-i. in-t chernoy metallurgii, 1956, Nr 15, pp 304-312

ABSTRACT: An investigation has been made into the relationship of the elastic modulus with temperature (ET) to the temperature of heating on tempering and the relation of the saturation value to the heat treatment of dispersion hardening alloys such as elinvar N30VVe, N36KhTve, N40TYu, N41KhT, N30VT, N36KhT. It is shown that a low ET, highly dependent upon the temperature of tempering, combined with a low saturation value (1000-1200 gauss), is had by springs of N30VT alloy containing 2.7 percent Ti after tempering at 375°. However, the ET of this alloy undergoes a pronounced change when the temperature changes from 20 to 40°. It was not possible to obtain a low ET in springs of alloys with lower saturation values (N30VVe,

Card 1/2

137-58-1-1913

Dispersion Hardening Alloys With Low Thermal Coefficients (cont.)

N36KhT_{Ve}, N36KhT). The ET of magnetic springs of N41KhT alloy undergoes little change as temperature of tempering changes and is virtually independent of temperature in the 20-40° interval.

TITLE: Elinvar alloys for elastic sensitive elements

PERIODICAL: Referativnyy zhurnal, Metallurgiya, no. 10, 1961, 16, abstract
10I122 ("Sb. tr. Tsentr. n.-i. in-t chernoy metallurgii", 1959, no.
22, 104 - 110)

TEXT: An investigation was made of a number of experimental heats contain-
ing in %: C 0.05, Si 0.3-0.8, Mn 0.4-0.8, Ni 41-43, Ti 2.2-2.8, Cr 5.0-6.0, Al
0.4-0.8. The investigation was carried out for the purpose of discovering an
Elinvar alloy with a higher Curie point and a lesser factor of thermal expansion
than those of the known H41XT (N41KhT) alloy. It was found that by increasing
the Ni content and reducing the Ti content, an alloy can be obtained which after
rapid cooling from 900°C and tempering at 700°C has σ_p 116 kg/mm², R_0 33, E
19,600 kg/mm² and $\alpha(6 - 7.2) \cdot 10^{-6}$. This alloy can be used for elastic sensi-
tive elements subjected to heating up to 180°C.

T. Fedorova

Remark: This book is intended for geographers and for the general reader interested in the geography of Lithuania.

CONTENTS: The first volume of the Geographical Yearbook presents articles by 22 authors covering aspects of the geology, geomorphology, geology of the Quaternary, limnology, and human geography, etc. of Lithuania. The publication also includes a separate section devoted to book reviews and a chronicle of scientific events. Articles are written in Lithuanian with English and Russian reviews. References accompany each article.

 ABSTRACT : Twenty-seven 100 days old wether lambs of the
 Merino-Precoc breed were divided into 4 groups
 which were fed rations with varied quantities
 of protein per feed unit (the 1st group re-
 ceived 85.5 g of protein, the 2nd, 109.4 g,
 the 3rd, 143.6 g, and the 4th, 167 g). The
 best weight gain (253.14 ± 37.36) and feed
 return (5.7 feed units and 0.81 kg of dige-
 stible protein per 1 kg of weight gain) were
 displayed by wethers of the 3rd group.

 ABSTRACT : The experiment was conducted with 38 young
 bulls of the black-white plain breed whose
 live weight was from 41-51 to 110-120 kg.
 The experiment lasted for 84 days. Thirty-
 eight different rations with different con-
 tents of whole milk (from 608 to 175 kg) and
 skimmed milk (from 318 to 824 t) were used.
 In proportion to the removal of whole milk,
 the calves consumed more concentrates and
 hay. When whole milk was reduced by 100 kg,

TITLE: Reconstruction Experience in the Kiln Section of the
Krichev Cement-Slate Combine

PERIODICAL: Tsement, 1959, Nr 3, pp 4-10 (USSR)

ABSTRACT: The reconstruction of the Krichevskiy tsementno-shifernyy kombinat (Krichev Cement - Slate Combine) must be completed by the end of 1959. The extension of this plant, and also of the Volkovyskiy tsementnyy zavod (The Volkovysk Cement Plant) is to be completed toward the end of the Seven Year Plan. The output of the first is to be quintupled and that of the second doubled, in comparison with 1958 production. The reconstruction of the kiln section, designed by "Sevkavgi-promstroy", consists of rebuilding all supporting structures, including foundations, and replacement of the 3.0x82.5 m kiln by a new kiln of 3.6x78.0 m dimensions. All lifting operations were performed with two

Reconstruction Experience in the Kiln Section of the Krichev
Cement-Slate Combine

cranes, one railway steam crane of 45 tons capacity, and one gantry electric crane of 60 tons capacity. The old kiln is to be shipped to the Grodnenskiy kombinat stroitel'nykh materialov (the Grodno Combine of Building Materials). The reconstruction work was completed in 43 days. Two to 6 month periods were needed for the completion of similar reconstruction work at the Bryanskiy and Pikalevskiy tsementnyye zavody (Bryansk and Pikalevo Cement Plants), etc. The author concludes that with better planning, proper coordination of work and timely delivery of subassemblies, the reconstruction could be accomplished in 30 to 35 days. The article includes detailed information on the work and the temporary scheme used for the kiln reconstruction. There are 3 sets of diagrams and 4 photographs.

Title : *Scopolia carniolica* Jacq. in Eastern Carpathians.

Orig Pub: Ukr. botanichnyi zh., 1957, 14, No 3, 59-67

Abstract: The work was conducted for the purpose of clarifying the classification status of European *scopolia* (I; *Scopolia carniolica* Jacq.) growing under natural conditions in the Eastern Carpathians. The results of the studies

show that (I) is distinguished from the common scopolia in the form and coloration of the corolla, in the shape of the leaves and the dimensions of the plant itself. Noting the variability of such unstable characteristics as the shape and the coloration of the corolla, the author comes to the conclusion that one species of scopolia with two forms grows in Eastern Carpathians: *S. carniolica* Jacq. f. *dentata* Czopik and *S. carniolica* Jacq. f. *intergrifolia* Czopik. The vegetation beds of scopolia
