751. THYROID FUNCTION IN HYPERTENSIVE DISEASE (Russian text) -
Georgadze K. A. - TRUD. PEROVOI ZAKAVK. KONFERENTSII PO MED.
RADIOL. 1956 (229-234)

Twenty patients in the first, 54 in the second and 26 in the third stage of hypertensive disease were investigated. BMR and functional tests with I^{131} were used in the investigations in addition to clinical examination. The following conclusions were reached: In a majority of cases in the first stage of the disease the rate of accumulation of I^{131} in the thyroid gland is increased or at least is near the upper limit of the normal; as the disease progresses this figure declines and becomes markedly lowered in the 3rd stage of the disease; in the majority of patients in the first stage of the disease the BMR is increased and it increases further in the later stages. A comparison of the results obtained by means of functional tests using I^{131} and from the estimation of BMR leads to the conclusion that the former method is the more accurate. (S)

Title : The Functional State of the Thyroid Gland in Hypertensive Disease.

Orig Pub : Tr. 1-y Zakavkazsk. konferentsii po med. radiol. Tbilisi, Gruzmedgiz, 1956, 229-234

Abstract : One hundred patients were studied. In the majority of those in the first stage of hypertensive disease, I^{131} uptake by the thyroid gland and the BMR (determined with Knipping's apparatus) were increased. As the disease progressed, I^{131} uptake diminished and the BMR rose even further. The lack of a parallel between the changes in I^{131} uptake and BMR indicates that a rise in BMR is caused not only by thyroid dysfunction, but by other factors as well.--A.V. Chuvayev

TITLE: Random processes which are connected with the working of
automatic and production lines

PERIODICAL: Referativnyy zhurnal, Matematika, no. 8, 1962, 13,
abstract 8V70. ("Nauchn. zap. Odessk. politekhn. in-t", 1961,
34, 14-22)

TEXT: The author considers the evaluation of experimental
statistical data which are obtained on working automatic and production
lines. Data which are collected in groups are given for the duration of
the treatment of equal details on equal workbenches, for the duration of
the breakdown of workbenches and for the time intervals between the
construction of two consecutive production pieces. It turned out that one
can use the Pearson curves of third type for approximating the distribution
density of the duration of treatment t , the displaced exponential
distribution for the distribution densities of the duration of breakdown
 τ . As approximation of the distribution density of the time intervals

SOURCE: Vynalez, no. 12, 1965, 25

TOPIC TAGS: honeycomb structure, sandwich structure, structural panel

ABSTRACT: A method is described for producing honeycombs for sandwich or conjugate structural elements which has the distinguishing feature that before the formation of the foil or sheet which are to be joined together, holes are punched at the points of junction and the sheet is held together by overlapping of the flaps around the edges of the holes.

Title : Current Stabilization Circuit in Experiments on the
Determination of the Temperature Dependence of the Work
Function.

Orig Pub : Studii si cercetari fiz. Acad. RPR, 1958, 9, No 4, 445-
450

Abstract : The authors describe an electronic circuit, intended for
stabilization of the anode current of an experimental
instrument, serving to determine the temperature dependen-
ce of the work function. The stabilization is carried
out by compensating the changes in the work function by
suitable changes in voltage applied between the cathode
and the anode of the instrument. The method proposed
makes it possible to realize simultaneous recording of

✓ Variation of technological indices of (ore) flotation with duration of the process when a single concentrate is produced. L. H. Pann and D. Georgescu (*Studia Cerc. Metal. Bucharest*, 1956, 1, 147-172). Equations are developed to represent the variation with time of the indices of concentrate extraction, proportion of useful material in concentrate and yield of flotation process, and are verified experimentally using pure minerals and mineral mixtures. "Immunofluorescence as a Method for the Identification of the Localization of Enteropathogenic Escherichia coli in Experimental Infection."

Bucharest, Revista Sanitara Militara, Vol 62, No 4, Jul-Aug 66, pp 723-725.

Abstract: The authors attempted to determine experimentally whether immunofluorescence is an effective means for determining the localization of E. coli in experimentally infected animals. The results were satisfactory, on condition that a very active fluorescent serum was used.

Manuscript submitted 6 April 1966.
