SOURCE: Vojenske zdravotnické listy, no. 4, 1965, 144-145

TOPIC TAGS: audition, diagnostic medicine, otolaryngology, acoustic biologic effect

ABSTRACT: The tests for impaired hearing can be made by the whispering test, test of loud speech, and tonal and verbal audiometry. The whispering test as a method of evaluation of hearing ability was investigated. The method has serious shortcomings. Verbal audiometry gives the best evaluation of the hearing organs. Its disadvantage is that it is rather slow and hence unsuitable for military evaluation of the hearing ability. The most suitable method is the tonal method; its disadvantage is that instead of physiological stimuli it uses pure tones. Orig. art. has: 1 figure and 2 tables. Military Hospital, Prague (ORL oddeleni Ustredni vojenske nemocnice)TITLE: Sequel of damage and contusion of the chorda tympani at tympanotomy<sup>22</sup>

SOURCE: Vojenske zdravotnickie listy, no. 4, 1965, 150-152

TOPIC TAGS: audition, neurologic surgery, gustation

ABSTRACT: Seventy-seven patients who underwent tympanotomy were investigated. In 31, the chorda tympani was interrupted during the operation, and in 46 it was undamaged. After the operation, nearly all the patients complained that they could not taste food; however, the patients with intact chorda tympani regained their ability to taste much faster. Within 3 months the patients with intact chorda lost all their difficulties. The mechanism of this phenomenon is not yet clear. Orig. art. has: 4 figures. [Based on author's Eng. abst.] [JPRS]

TITLE : The Contribution of Harmonic Vibrations to the  
Thermodynamic Functions for One Degree of Freedom  
ORIG. PUB. : Chem Listy, 52, No 8, 1653-1667 (1958)  
ABSTRACT : The contribution of harmonic vibrations to the  
heat capacity and the functions  $(H^\circ - H_0^\circ)/T$   
and  $(G^\circ - H_0^\circ)/T$  have been tabulated for one degree  
of freedom for wave numbers of 100-3,600  $\text{cm}^{-1}$  at  
15 temperatures ( $273.16^\circ\text{K}$ ,  $298.16^\circ\text{K}$ , and at  $100^\circ\text{K}$ )  
intervals in the temperature range  $300-1,500^\circ\text{K}$ .  
The values of the heat capacity in the range  
 $100-1,000 \text{ cm}^{-1}$  are given at intervals of  $10 \text{ cm}^{-1}$ ;  
a  $20-\text{cm}^{-1}$  interval is used for  $1,000-1,800 \text{ cm}^{-1}$ ,  
and the heat capacities for the range

✓Thermodynamic functions of organic compounds. I.  
Equation for the temperature dependence of heat capacities  
of ideal gases. /Zdeněk Šeba and Robert Holub (Výzkumný  
ústav organických syntet. Příbramice-Kyjovice, Czech.).  
*Ckem. listy* 52, 2210-21 (1958).—An equation of the form:  
 $C_p^o = A - [B/(T + C)]$  is recommended that yields more  
precise results in the temp. range from 300 up to 1000°K.  
than does the commonly used quadratic equation. This  
equation is especially convenient for the heat capacities of a  
homologous series of org. compds. B. Erdélyi

HOLUB, V.  
(1427)

A description of 11 patients is given. In cases of spastic infantile paralysis treatment must be carried out by an orthopaedic surgeon, a neurologist and a physical training expert. Before operation co-operation with the patient must be assured. In psychically altered children, therefore, it must not be carried out. More success is to be expected in hemiplegias than in diplegias. Accompanying extrapyramidal symptoms, if slight, are not a contradiction.

Platybasia - A new symptom of gargoyleism LÉK. LISTY  
1954, 9/18 (418-420) Illus. 5

Platybasia was found to be the cause of the short neck in 3 cases of gargoyleism  
(2 girls and 1 boy). It satisfactorily explains the characteristic appearance  
in these cases, where the head practically seems to rest on the shoulders, as  
well as a number of neurological manifestations which are generally associated  
with platybasia. The suggestion is made, that the reason for its development may  
lie in an abnormal structure of the bones involved. Holzel - Manchester

Ten children whose mothers suffered from infectious hepatitis in the first 2-3-4 months of pregnancy, were examined and all were found normal. Only one child showed abnormalities neurologically and psychiatrically, but this child was born prematurely with a weight of 1600 g. Infectious hepatitis seems to be of little importance in the genesis of congenital defects.

Following a short review of the most recent observations on nervous complications of parotitis the author quotes his own observation of a girl aged 3.5 yr. who fell acutely ill with cerebellar symptoms without fever, headache and other general signs of infection. The sister of this patient had epidemic parotitis 2 weeks previously. The CSF findings were found to be negative 1 week after the onset of the illness. A parotitic infection was confirmed serologically. The severe cerebellar syndrome receded within 4 weeks. A parotitic cerebellitus without a simultaneous involvement of the parotic glands was diagnosed.

Neurosy v detskem veku s hlediska vyslktu, etiologie a prevance. (Neuroses in Childhood from the Point of View of Their Occurance, Etiology, and Prevention. 1st ed. bibl., illus.) Authors: Vaclav Holub, Josef Svancara. Prague, SZdN, 1957. 74 p. No. 365 of the series Thomayerova sbirka prednasek a rozprav z oboru lekarskeho (Thomayer's Collection of Lectures and Discussions on Medicine)

A clinical study based on facts (5,6000 investigated children) is analyzing causes and laws of neuroses during neuropsychic disturbances in childhood. The characteristic symptomatology of disturbances in children is pointed out as compared with that in adults; etiology and frequency of occurrence as well as prevention of neuroses are discussed. The study is intended for physicians, psychologists, pedagogues, social workers as well as parents.

the Action of Wastes from Treatment of Magnesito."

Bratislava, Biologia, Vol 21, No 5, 1966, pp 365 - 375

**Abstract:** The influence of Mg, Ca, Na, K, and P on *Agropyrum repens* P. Reauv., *Triticum aestivum*, and *Secale cereale* was investigated in an experiment where the soil pH was 6.5-9.4 and the Ca:Mg ratio 0.12 to 0.77. Wheat is sensitive to high Mg content; the other two plants tolerate Mg well. High contents of Mg decrease the content of P in the plant. Plants that have a narrow range of the ratio Ca:Mg tolerate high amounts of Mg better than plants where the range of the ratio is wider. 1 Figure, 2 Tables, 19 Western, 6 Czech, 9 Russian, 3 East German references. TITLE: Portable electric welder for miniature welds. CZ Pat. No. PV4942-64

SOURCE: Vynalezy, no. 1, 1966, 13

TOPIC TAGS: welder, welding equipment, arc welding, miniature weld

ABSTRACT: An Author Certificate has been issued for a portable electric welder designed for making miniature welds. The unit has an adjustable capacitor discharge welding circuit and an adjustable arc-welding circuit. Both circuits are connected to a single power supply by a transfer switch. In addition, the first circuit is provided with a timer switch for regulating discharge intensity by changing the number of switched-in capacitors in the sequence. The second circuit has a high-frequency element providing a sparkover ionization path between the electrode and the welded object, a trip relay with variable RC coupling to control the ionisation-discharge time, and a low-frequency element with an auxiliary power supply to form a welding arc in the ionization path. Both elements are interconnected by a spark gap. [KP]

Title : Lung Ventilation and Requirement of Oxygen During Physical Work in Adults and Adolescents.

Orig Pub : Ceskosl. fysiol., 1957, 6, No 2, 176-181

Abstract : In 29 healthy males adults and 28 boys 14 years old with different degrees of training after stress (work on a veloergometer for 1 minute) pulse rate and respiration decreased faster than the requirement of O<sub>2</sub>; the coefficient of utilization of O<sub>2</sub> often fell significantly lower than normal, especially in those not trained; in the non-trained person after the stress of a minute volume of respiration and especially the requirement of O<sub>2</sub> were significantly increased in comparison with the trained.

Congress in Leyden."

Prague, Ceskoslovenska Fisiologie, Vol 12, No 1, Jan 1963; pp 68-75.

**Abstract:** This is actually a series of 7 articles authored by the above  
7 authors as follows: general aspects; conditioned reflexes, spreading  
depression, electrical activity of the cerebral cortex; sleep and  
awakening, biochemistry and metabolism of brain, reticular formation;  
general physiology and pharmacology; cell physiology; the neuron, the  
synapse, glandionic transmission, mediators, GABA; and adaptation,  
stress and shock. Very condensed reports of this meeting in September,  
1962 in Holland, giving essentially little more than the titles and  
authors and nationalities or cities of origin. Some papers are discussed  
in a few sentences.

"R. BERANEK: Intracellular Electromyography in Man."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 3, May 66, p 260

Abstract: The article is a review of a book published by the State Medical Publishing House (Statni Zdravotnické Nakladatelstvi) at Prague in 1965; it has 120 pages, 60 figures, and sells for 11 Kcs.

The book has 2 sections. In the first the problem of intracellular electromyography is reviewed. In the second author's original method of measurements is described. This method made it possible to measure electric potentials inside of individual muscle fibers of man, something that has never been achieved before. Detailed instructions for the construction of apparatus needed for the method are given. The high impedance input circuit of the amplifiers and the glass microelectrodes used in the method are described. No references.

ty in Coals.

Orig Pub : Uhli, 1957, 7, No 11, 381-387.

Abstract : The reflective property of 38 samples of Czechoslovakian  
coal from various coal basins of the country was measured  
on a reconstructed Reichert's microscope which was equip-  
ped with a special device for microphotography. The date  
obtained are represented on diagrams, microphotopictures  
and in tables.
