"Ratios between Height of Nasal Fossa and Bony Palate with Various Sphenopalatine Angles."

Belgrade, Srpski Arhiv za Celokupno Lekarstvo, Vol 91, No 3, Mar 63;  
pp 251-257.

Abstract [French summary modified]: Anatomical study of 163 skulls from adults above age 25: ratios between height of osseous palate and nasal fossa. Contrary to opinions in the literature, a high palate does not usually mean a lowered nasal cavity - usually both are high or neither. Cranial kyphosis (sphenoidal angle) is usually in directly inverse ratio to these sizes, but various unrelated factors may affect these general rules in some individuals. Two photographs; 3 tables, 15 Western references.

TITLE: Studies and Research in the Field of Hydrology, Water Power, and Water Resources (Studiski i istražni radovi u oblasti hidrologije, hidroenergetike i vodoprivrede)

PERIODICAL: Elektroprivreda, 1959, Nr 1, pp 14 - 17 (YUG)

ABSTRACT: The article describes activity of the Odeljenje za hidrologiju i hidroenergetiku (Department for Hydrology and Water Power), the Odeljenje za spoljna ispitivanja (Department for Field Studies) and the Odeljenje za vodoprivredu (Department for Water Resources) of the Hidrotehnicki institut "Inž. Jaroslav Černi" (Inž. Jaroslav Černi" Hydro-Engineering Institute) during the first ten years of the Institute's existence. Hydrological studies of

Yugoslavian rivers and the harnessing of their power were carried out in the Department for Hydrology and Water Power. Hydrological field measurements which supply data for these studies were carried out by the Department for Field Studies. This department also calibrated, during the period 1955 - 1958, about 500 hydraulic current - meters. During the period 1953 - 1958 ten hydropower plants, including Bogatići, Mesići, Jajce I, Jajce II, three power plants in the Vlasina hydro-complex, and, in part, Jablanica hydropower plant, were inspected and checked. The production and improvement of measuring equipment used by the department is also an important activity here. Papers on some new measuring methods and equipment are published by the Hydro-Engineering Institute. The Department for Water Resources prepared papers on multi-purpose usage of water for several rivers and areas, such as the water resources basis of Ma-

Belgrade: The first impulse to establish a separate mental hospital in  
Serbia followed a well-publicised 1807 homicide by an inmate, but  
political and other factors delayed opening to August 1861 with its  
construction which subsequently extremely rapid growth. Traditional  
overcrowding became especially critical during the Second World War  
when hospital became part of underground system for hiding the Jewish  
population from Nazis during similiarly terrible famine and frightening  
deportation among patients; German occupiers once came by surprise and  
locked many of escapees into trucks to field gas chambers in Jasenovac  
where everyone was killed; now the hospital is overcrowded again, hopes  
for expansion of means, services and facilities.

## **PROCESSING AND PROPERTIES INDEX**

Addition of saturated hydrocarbons to the double bond of unsaturated hydrocarbons in the presence of aluminum chloride. S. L. Juvanveld and Miss A. M. Pujol. *Bull. soc. chim. belg.*, 10, 159-62 (in French), 162 (1930).—Ipatiev, et al. (*C. A.*, 30, 5173<sup>c</sup>), have found that in the presence of  $\text{AlCl}_3$  satd. hydrocarbons of different mol. wt. can be alkylated with olefins of low mol. wt. (ethylene, propylene and butylene). The purpose of the present investigation was to see whether olefins of high mol. wt. would react in the same way. On addn. of  $\text{AlCl}_3$  a sample of petroleum oil of high I no. and low viscosity could be transformed into an oil of low I no., high viscosity and increased mol. wt. (aa blend, cryoscopically). Normal benzene was used as solvent in this reaction. The final product was very stable, as its properties had not changed after 11 months' standing. The constns. of the original and the final products, resp., are: b. (high vacuum) 150-200°; —; paraffin content 1.5, 1.3%; flash point 165, 166.5°; f. p. -11°, -11°; mol. wt. 270, 314; I no. 85, 3.74; viscosity at 20° 2.32, 3.91; viscosity at 50° 2.26, 1.98. The olefins present in the original sample of oil were of high mol. wt.; hence, alkylation of paraffins in the presence of  $\text{AlCl}_3$  can be done with olefins of high mol. wt. The addn. takes place at the double bond, as evidenced by the considerable change in the I no. Owing to the small quantity of material, it could not be established whether the paraffins taking place in the reaction came from the oil itself, or from the benzene solvent.

APPROVED FOR RELEASE: 08/10/2001 CIA-RDP86-00513R000619710008-9"

190. DISTILLATION OF SCHIST. Jovanovic, S. L. and others (Glasnick Khem. Drushtva Beograd (Bull. Soc. Chim. Belgrade), 1947, vol. 12, 143-160; abstr. in Brit. Abstr., AI, June 1949, 264).

Batches of 10 k.g. of schist from Miranovac (Serbia) were distilled in an iron retort and the gases condensed in a series of four condensers at a constant temperature (180°, 100°, 60°, and 20°). The light fractions after the last condenser were absorbed in paraffin oil. The average weight (g.) of the fractions was 58.05, 499.98, 191.13, and 57.63. In the paraffin oil 76.8 g. were absorbed. Coke (6665.4 g.) and water (1434.9 g.) were also present. The schist contained 54% of inorganic matter.

✓ 669. Rapid electro-analytical method for the determination of lead as lead dioxide. S. Jovanović and V. J. Virganti (Chem. Ind. [London], 1955, 20, Yugoslavia), Bull. Soc. Chim. Beograd, 1955, 20 (6), 335-342. — For the rapid electrolytic determination of Pb as  $PbO_2$ , 0.1 to 0.55 g of metal is dissolved in 20 ml of conc.  $HNO_3$  plus 5 ml of 60 per cent.  $HClO_4$ , and made up to 170 ml. The solution is electrolysed at 2.9 V and 1.0 A, at 60° C, for 30 min. The deposit is dried at 120° C. The conversion factor is 0.8014; in the presence of  $H_2SO_4$ , the factor is 0.856. The effects of 29 other ions are investigated; comparable amounts of Co, Cr,  $Na_2HPO_4$ , Mn, Hg, Bi, As, Mo and  $TiO_2$  affect the results, but small amounts do not.

"Ten Years of Artificial Insemination of Cattle in Serbia."

Belgrade, Veterinarski Glasnik, Vol 17, No 4, 1963; pp 313-322.

Abstract [German summary modified]: Gratified review of excellent results achieved with artificial insemination in Serbian and Yugoslav cattle. In Yugoslavia in 1961, 783,875 cows were inseminated by 608 bulls from 42 artificial insemination centers. Detailed statistical data by 7 breeds; 13 Serbian centers; many technical details and comments. One urgent need now is for a specialised national scientific journal dealing with bovine sterility and artificial insemination. Eighteen Yugoslav references.

AUTHOR: Jovanović, V.

TITLE: The influence of losses in a reactive two-terminal work

PERIODICAL: Referativnyy zhurnal. Avtomatika i radioelektronika,  
no. 5, 1962, abstract 5-7-39 v (Publ. Elektrotehn. fak.  
Univ. Beogradu, Ser. Telekomun. i elektron., 1960,  
no. 25, 12 pp., ill.)

TEXT: Two-terminal networks are considered which consist solely of inductances and capacitances. It is shown that the function of the output susceptance (impedance or admittance) can be separated into parts which can be represented by equivalent circuits. When all inductances have the same value of  $r/L$  and all capacitances the same ratio of  $g/C$ , each part of the susceptance can be realized by a parallel circuit with a suitable susceptance. Parallel resonant circuits of the equivalent circuit are in this case composed of elements with losses identical with those of original circuit elements. The proposed method of function separation allows rapid calculation

"Control of I<sub>131</sub>-Tagged Rose Bengal Produced in the Boris Kidric Nuclear Sciences Institute in Vinca."

Belgrade, Arkhiv za Farmatsiju, Vol 16, No 2, 1966; pp 83-87.

Abstract: Electrophoretic and chromatographic analysis of the purity of rose bengal labeled with iodine-131 showed that only 1.7% of the iodine in the compound was unlabeled; when administered to mice, 10 minutes later 43.5% of activity was in the liver, 1.7% in kidney, only 0.16 in the thyroid. Elimination was 58% in the feces, 1.4% in the urine. Graph, 3 tables; 1 Soviet and 4 Western references.

Title : Periodic Ophthalmia in Horses and Factors of the  
Environment

Orig Pub : Veterin. glasnik, 1957, 11, No 5, 514-521

Abstract : The author studied the incidences of periodic ophthalmia  
in horses occurring in one of the regions of Yugoslavia  
for a period of 5 years. He noted that the disease's  
incidence depended on the location of the area above sea  
level (the higher above sea level, the lower its inci-  
dence), on the lowered level of subterranean waters, and  
on the increased distance from rivers. Most cases of  
ophthalmia were observed in spring (April); the incidence  
of the disease decreases somewhat during the summer

"Modern Concepts of Renal Physiology."

Belgrade, Srpski Arhiv za Celokupno Lekarstvo, Vol 90, No 11, Nov 62; pp 1079-1086.

Abstract: Mainly a discussion of the countercurrent flow multiplier system with an analysis of the data tending to confirm or discredit various hypotheses first enunciated by Wirtz's school; use of osmotic concentration and water diffusion gradients to achieve high excretion of urea with little expenditure of energy by kidney tubule cells. Three original diagrams, 22 Western references.
