Antibiotic properties of thermophilic actinomycetes. A. E. Kosmachov (Inst. Microbiol., Acad. Sci. U.S.S.R., Moscow), *Mikrobiologiya* 25: 840-85 (1968). — Of 839 cultures of thermophilic actinomycetes, subtropic to arctic in origin, 401 (47.8%) were active; but from high altitudes only 8 of 65 cultures had antibiotic activity. Some strains cause lysis of killed bacterial cells, or cells elaborate antibiotics (toxic to various bacteria, fungi and *Actinomyces* species) in liquid cultures at 50-60°C. These strains grow 2-4 times faster than mesophilic actinomycetes. Some concentrates were obtained which were active against tuberculosis and avian tuberculosis. Julius R. Smith

TITLE: A Conference on the Physiology and Biochemistry of Microorganisms (Konferentsiya po fiziologii i biokhimii mikroorganizmov)

PERIODICAL: Priroda, 1957, No 10, p 109 (USSR)

ABSTRACT: The Institute of Microbiology of the AN USSR and the faculty of Soil Biology of the Moscow State University, in April 1957, in Moscow, held a conference on the physiology and biochemistry of microorganisms used in the industry. The most prominent microbiologists of the USSR as e.g., Academician V.N. Shaposhnikov, Corresponding Member of the Academy A.A. Imshenetskiy, Professors M.N. Meysel' and N.D. Yerusalimskiy participated with lectures on biological topics. The conference was divided into four sections covering: biochemistry, yeast organisms, bacterial fermentation, antibiotics. These sections dealt with direct application of the results of biochemical research in various branches of industry based on the use of microorganisms. During the conference, over 60 lectures were heard and discussed. It was pointed out that the main problem of microbiology was to achieve control over the metabolism of

Title: STUDIES ON THERMOPHILIC MICROMONOSPORA AND THE BIOSYNTHESIS OF A T-12 ANTIBIOTIC UNDER CONDITIONS OF SURFACE AND SUBMERGED FERMENTATION

Periodical: *Mikrobiologiya*, v. 31, no. 1, 1962, 66-71

Text: In a previous work (Kosmachev, *Trudy Inst. Mikrobiologii*, 8, 339, 1960) it has been shown that some thermophilic actinomycetes possess not only antibacterial, but also an antitumor activity *in vitro*. Some properties of crude T-12 antibiotic with antibacterial and antitumor activity *in vitro* were described. The present communication is concerned with a detailed description of the microorganism-T-12/3 strain of thermophilic micromonospora (related to *Thermoactinomyces (Micromonospora) thalpopilus*), its selection, production of the T-12 antibiotic under conditions of surface and submerged fermentation at 50-60°C and short description of chemotherapeutic properties of the antibiotic. Growth in liquid and solid media of the following composition gave good yields of the antibiotic: starch, 20 g; ammonium sulfate, 1 g; potassium nitrate, 1 g; disodium phosphate, 1 g; magnesium sulfate, 0.5 g; FeSO₄, 0.001 g; calcium carbonate, 4 g; 30% yeast autolysate, 15 ml; peptone, 0.5g; soy flour, 0.5 g; tap water, 1000 ml. (For solid media, agar, 20 g was added). Semi-industrial

fermentation was carried out in 45 liter fermentors. Good growth was obtained after 21-24 hours at 51°C; 17,000 units of antibiotic per 1 ml of mycelial acetone extract were obtained. Purification of the antibiotic: Mycelium was extracted with acid acetone (pH 3.0), neutralized and the sediment discarded. The acetone extract was evaporated to emulsion. The emulsion was saturated with NaCl. Oily precipitate formed. This was separated and dissolved in ethanol. Antibacterial spectrum: *Micrococcus aureus*, *Bacillus subtilis*, *Bac. mycoides*, *Bac. mesentericus*, *Bac. anthracoides*, *Caryophanon latum*, *Mycobacterium vadosum*, *Sarcina lutea*, *Bac. paracoli*. Inhibition of dehydrogenase activity of Ehrlich ascites cells and lymphoma(Lio-1) cells was noted. The antibiotic was ineffective against: *Bact. coli*, *M. phlei*, *Candida albicans* and *Sacch. cerevisiae*. It was non-toxic to mice in a dose of 4000 units. There are 2 figures.

Polucheniye polostey i otverstii v metalle elektroiskrovym sposobom (Electrospark Method of Cutting Cavities and Holes in Metals) Moscow, Mashgiz, 1952. 93 p. (Series: Bibliotekha elektrotehnologa, No. 4) 6,000 copies printed.

Ed. (Title page): Gusev, V. N., Laureate of the Stalin Prize, Engineer; Ed. (Inside book): Popilov, L. Ya., Engineer; Tech. Ed.: Sokolova, L. V.; Managing Ed. for Literature on Machine Building Technology (Leningrad Division, Mashgiz): Nikitin, P. S., Engineer.

PURPOSE: This booklet is intended for technologists working in the field of electrical metalworking processes and for skilled workers.

COVERAGE: The booklet presents basic principles of the electrospark machining of holes and cavities in metals. Information on electrospark equipment is given and some examples of the applications of electrospark machining methods are presented. The following personalities were awarded Stalin prizes for their contributions to the development of electromachining methods; B. R. Lazarenko, N. I. Lazarenko, and V. N. Gusev. For the purpose of introducing and promoting electromachining methods, the Leningrad branch of Mashgiz (State Scientific

Tekhnologiya izgotovleniya bystrorezhushchego instrumenta (Technology of Manufacturing High-speed Cutting Tools) [Leningrad] Lenizdat, 1958. 154 p. 5,000 copies printed.

Ed.: Ye.V. Yemel'yanova; Tech. Ed.: P.S. Smirnov.

PURPOSE: This book is intended for engineers, technicians, and foremen in the cutting-tool manufacturing industry.

COVERAGE: This book reviews the progressive experience of several Leningrad tool and machine-building plants which produce high-speed cutting tools with welded-on, brazed, and inserted tips. Manufacturing methods, the process of making tool holders and tips, their assembly machining, and heat treatment are discussed in detail. The author also describes results of tests conducted to determine the life of tipped-tools, savings in high-speed steel resulting from manufacture of tipped tools, and the organization of tool tip welding departments. No personalities are mentioned. There are 17 references, all Soviet.

PHASE I BOOK EXPLOITATION

SOV/3647

Kosmachev, I.G.

Osnovy instrumental'nogo proizvodstva (Fundamentals of Toolmaking). [Leningrad]
Lenizdat, 1959. 359 p. (Series: V pomoshch' molodym rabochim) 15,000
copies printed.

Ed.: Ye.V. Yemel'yanova; Tech. Ed.: P.S. Smirnov.

PURPOSE: This textbook is intended for junior workers in the toolmaking industry.
It may also be useful to students specializing in toolmaking in secondary
technical schools and schools of higher technical education.

COVERAGE: The book deals with modern methods of toolmaking. Designs of cutting
tools, selection of tool materials, manufacture of tipped tools, and heat
treatment and inspection of tools are discussed. No personalities are men-
tioned. There are 21 references, all Soviet.

TOPIC TAGS: microclimatology, East Siberian freezing period, freezing period estimation, East Siberia microclimatology

TRANSLATION: The microclimatic conditions in the regions of Eastern Siberia give rise to considerable differences in the duration of the frostless period over very limited areas. The duration of the frostless period may be 40-45 days longer or shorter in a given area than in an adjacent area. The authors point out the need for a more detailed spatial consideration of the arrival of autumn frosts; this will increase the effectiveness of agriculture in Eastern Siberia. In this

TITLE: Focusing characteristics of an electrostatic mirror with a cylindrical field

SOURCE: Zhurnal tekhnicheskoy fiziki, v. 36, no. 1, 1966, 132-138

TOPIC TAGS: electron optics, mass spectrometry, electrostatic field, electrode potential, charged particle, ion energy

ABSTRACT: The authors discuss focusing of charged particles by the electrostatic field between two coaxial cylindrical electrodes. The ions are assumed to originate in a point source on the common axis of the electrodes and to enter and leave the inter-electrode region through circular slots in the inner electrode. Charged particles with a certain energy, depending on their charge and mass, the potential difference between the electrodes, the radii of the electrodes, the distance between the slots in the inner electrode, and the position of the source, will be brought to a focus on the axis. It is proposed to employ such a system of electrodes to record the energy spectrum of charged particles by keeping fixed the positions of the source and detector and varying the potential on the electrodes. The focusing conditions are derived. It is shown that not only first order, but also second order focusing occurs if the angle between the initial trajectory and the axis is $42^{\circ} 20'$. The authors also calculated the second

L 21711-66

ACC NR: AP6004888

○

order aberrations and the effect of finite source size, but in the present paper they only discuss the results and do not present the calculations. The energy resolution can be improved by employing multiple focusing with suitable irises in the intermediate image planes to eliminate oblique trajectories. The linear dispersion in energy of the cylindrical capacitor is approximately equal to that of a 180° spherical analyzer of equal size. The quality of focusing is adequate for analysis of ion beams with an angular divergence of 360° in the radial plane and several degrees in the axial plane. Orig. art. has: 17 formulas, 2 figures, and 1 table.

AUTHOR: Zashkvara, V.V.; Kosmachev, O.S.

TITLE: Application in mass spectroscopy of a magnetic analyzer with two-fold focusing of the ion beam

SOURCE: Zhurnal tekhnicheskoy fiziki, v.34, no.4, 1964, 737-744

TOPIC TAGS: electron optics, mass spectrometry, magnetic analyzer, double focusing magnetic analyzer, magnetic analyzer aberration

ABSTRACT: In this paper the authors discuss the second order electron-optical properties of a magnetic analyzer consisting of a sector of a nonuniform axially symmetric field of the type proposed by N.Svartholm and K.Siegbahn, (Arkiv Mat.Astr.Fys. 33A, No.21, 1946). Their purpose is to find suitable configurations for mass spectrometry applications, in which the ion source would be outside the field and the sector angle would be less than $\pi/2$. The differential equations for the trajectories are solved by a perturbation method in which second order terms in the deviations of the orbit from the central circular orbit are included, and the three second order angular aberrations are calculated. In this calculation the effect of the fringe

Card 1/2

ACCESSION NR: AP4028964

field on the beam as it enters and leaves the sector is neglected. It is found that the second order aberrations can be made to vanish for sector angles $\pi\sqrt{2}/2$. Two solutions are possible for the sector angle $\pi\sqrt{2}/2$. In one solution the ratios of the object and image distances to the radius of the central orbit are $\sqrt{2}/2$ and $2\sqrt{2}$, respectively; in the other solution these ratios are reversed. Field configurations are examined for which the image distance is zero, i.e., for which the image is formed at the boundary of the sector. Such a configuration would have the advantage of avoiding the defocusing effect of the fringe field as the beam leaves the sector, although fringe effects would still be present at entrance. No configuration of this type is possible for which all three second order aberrations vanish. Configurations are tabulated for which selected second order aberrations vanish, and suitable configurations are found for which the sector angle is between $140^\circ \times \sqrt{2}$ and $160^\circ \times \sqrt{2}$. Orig.art.has: 31 formulas, 2 figures and 3 tables.

AUTHOR: Zashkvara, V.V.; Korsunskiy, M.I.; Kosmachev, O.S. 41/

TITLE: Correction of the angular aberrations of a two-sector electrostatic analyzer 2

SOURCE: Zhurnal tekhnicheskoy fiziki, v.35, no.6, 1965, 1063-1067

TOPIC TAGS: ²¹electron optics, particle spectroscopy, spherical aberration, electrostatic analyzer, nonuniform electric field

ABSTRACT: This paper reports a continuation of earlier work presented in a series of papers by two of the present authors (ZhTF 34,1285, 1964; ZhTF 32,840,1962; PTE 3,21,1959; Tr.Khar'kovsk.politekhn. inst., ser.inzh.-fiz.85, No.3,43,1959). The aberrations of a 180° electrostatic analyzer of special construction due to the angular divergences of the beam in the radial and axial directions were investigated experimentally with a 1 keV electron beam. The construction and theory of the analyzer are discussed in the references cited above. The electrodes were laminated and the potential on them varied linearly

Card 1/2

L 54761-65

ACCESSION NR: AP5015630

in the axial direction. In the present work the 180° sector was replaced by two identical 90° sectors of which the fields could be independently adjusted. The aberrations were minimized by separately adjusting the fields of the two sectors in accordance with the theory presented in the earlier papers. It was found that the resolving power could be increased by a factor of 3 over that attainable with the one-sector instrument, and that the luminosity could be increased by an order of magnitude while decreasing the resolving power by a factor 1.7. It is concluded that other aberrations can also be corrected by employing more independently adjustable sectors. Orig.art.has: 1 formula, 3 figures and 3 tables.

TITLE: Analyzer of charged particles by their kinetic energies. Class 21, No. 175584

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 20, 1965, 44

TOPIC TAGS: ^{21,44,55} particle detector, particle physics, kinetic energy

ABSTRACT: This Author Certificate presents an analyzer of charged particles by their kinetic energies. The analyzer contains two electrodes and a receiver (see Fig. 1). To increase the sensitivity, the electrodes have the form of two coaxial cylinders. The outer cylinder carries a charge of the same sign as the charge of the particles. The internal cylinder has two annular slits located between the source of the particles and the receiver. The source and the receiver, in turn,

1. Khar'kovskiy gosudarstvennyy universitet. Predstavleno akademikom AN UkrSSR O.S. Vyalovyn.

LOGVINENKO, N.V.; KOSMACHEV, V.G.

Redistribution of some minor elements during diagenesis of deposits of the Tauric series in the Crimea. Dokl. AN SSSR 135 no.2:430-433 N '60. (MIRA 13:11)

1. Institut mineralogii, gokhimii i kristalokhimii redkikh elementov AN SSSR i Moskovskiy gosudarstvennyy universitet im. M.V.Lomonosova. Predstavleno akademikom D.I.Shcherbakovym. (Scandium) (Wolframite group)

LOGVINENKO, N.V.; KARPOVA, G.V.; KOSMACHEV, V.G.

The system of isomorphous substitutions in carbonates of the calcite group of sedimentary origin. Dokl.AN SSSR 138 no.1:188-191 My-Je '61. (MIRA 14:4)

1. Khar'kovskiy gosudarstvennyy universitet im. A.M.Gor'kogo.
Predstavleno akademikom N.V.Belovym.
(Isomorphism) (Calcite)

KARPOVA, G.V. [Karpova, H.V.]; KOSMACHEV, V.G. [Kosmachov, V.H.]

Carbonate concretions in the Middle Jurassic marine sediments
of the northwestern margin of the Donets Basin. Dop. AN URSR
no.9:1244-1247 '62. (MIRA 18:4)

1. Khar'kovskiy gosudarstvennyy universitet.

KOSMACHEV, V.G.

Redistribution of elements during the diagenesis of middle Jurassic clayey deposits in northwestern outskirts of the Donets Basin. Dokl. AN SSSR 139 no.1:195-198 J1 '61. (MIRA 14:7)

1. Khar'kovskiy gosudarstvennyy universitet im. A.M. Gor'kogo.
Predstavleno akademikom N.M. Strakhovym.
(Donets Basin--Geochemistry)

LOGVINENKO, N.V.; KARFOVA, G.V.; SHAPOSHNIKOV, D.P.; KOSMACHEV, V.G.

Stages of mineral formation in deposits of the Taurian series
of the Crimea. Dokl. AN SSSR 142 no.4:922-925 F '62.

(MIRA 15:2)

1. Khar'kovskiy gosudarstvennyy universitet im. A.M.Gor'kogo.
Predstavleno akademikom N.M.Strakhovym.

(Crimea--Petrology)

LOGVINENKO, Nikolay Vasil'yevich, prof.; KARPOVA, Galina Vasil'yevna, kand. geol.-min. nauk; SHAPOSHNIKOV, Dmitriy Prokof'yevich, Prinsipali uchastiye: LEBEDINSKIY, V.I., kand. geol.-mine. nauk starshiy nauchnyy sotr.; BELIK, P.G., dots.; KOSMACHEV, V.G., student; REMIZOV, I.N., dots.; ALYAB'YEV, N.Z., red.; ALEKSANDROVA, G.P., tekhn. red.

[Lithology and genesis of the Taurian formation in the Crimea]
Litologiya i genezis tavrisheskoi formatsii Kryma. Pod red. N.V.Logvinenko i I.N.Remizova. Khar'kov, Izd-vo Khar'kovskogo univ., 1961. 400 p. (MIRA 15:10)

1. Kafedra petrografii Khar'kovskogo gosudarstvennogo universiteta (for Logvinenko, Karpova, Belik). 2. Geologicheskii fakul'tet Khar'kovskogo gosudarstvennogo universiteta (for Kosmachev). 3. Institut mineral'nykh resursov Akademii nauk Ukrainской SSSR (for Lebedinskiy). (Crimea--Petrology)
