

A potential-impulse system of . . . .

S/799/62/000/002/001/011

trigger can operate only on the emitter-repeater, the shaping gate on an analogous shaping gate or a starting gate, the emitter-repeater either on the diode decoders or on the emitter-repeaters; the diode decoders control the impulse gates. The impulses and voltage levels in the links are standardized; (+) all noise-minimizing measures are taken. There are 6 figures and 2 Russian-language Soviet references.

✓ Some indexes of the protein metabolism and the functional state of liver in patients suffering from cerebral tumors. L. S. Cherkasova, F. D. Koldobakaya, V. A. Kurushkina, and E. I. Shuyak (Inst. Physiol., Acad. Sci. White Russian S.S.R., Minsk). *Invest. Akad. Nauk Beloruss. S.S.R.* 1955, No. 3, 127-30 (in Russian).-- Data are presented for the amts. of total protein, albumin, globulin, fibrinogen, and the protein index; the activities of the proteolytic and aminolytic enzyme; and the amt. of amino acid N (mg. %) polypeptide and urea N fractions of the blood in 21 patients suffering from cerebral tumors. Non-protein N increases during the illness, the increase being due to the accumulation of polypeptides, since the amts. of free amino acids and urea remain nearly unchanged. The normal proportion of albumin to globulin is disturbed and the enzyme activities lowered; the detoxicating capacity of the liver (Quick-Pytel method) is also greatly decreased as a result of the illness. Title : The Effect of Mechanical Stimulation of Gastric  
Receptors on Metabolic Processes Under Conditions  
of Exclusion of Certain Areas of the Brain Cortex.

Orig Pub: Tr. In-taFiziol. AN BSSR 1956, 1, 180-193.

Abstract: The fasting glucose blood level (G) in dogs increased following removal of the premotor area of the cortex of the left hemisphere. Distension of the stomach prior to the operation lowered the fasting G level during the first 15 min and raised it somewhat after 30-45 minutes; following the operation, this produced

Card : 1/2

APPROVED FOR RELEASE: 08/23/2000 CIA-RDP86-00513R000927320005

... decrease of the level in the first  
min. The alimentary hyperglycemia following feed-  
ing persisted much longer in the operated than in  
the non-operated dogs. The appearance of gastric distension also  
prevented the appearance of the maximum raise of  
glycemia. The removal of the motor area of the  
cortex of both hemispheres in rats produced storage  
of glycogen in the liver and a marked increase in  
muscle tissue content of creatin-phosphoric acid  
and preorganic P; the content in the brain tissue of  
creatinphosphoric P; the content of the muscle tissue re-  
mained of the same intensity. The reaction to mechani-  
cal stimulation of the receptors of the stomach in  
operated rats and rabbits remained the same as in  
non-operated animals.

TITLE: <sup>19</sup>Effect of neutron irradiation on tissue metabolism processes

B

SOURCE: Radiobiologiya, v. 6, no. 2, 1966, 179-184

TOPIC TAGS: neutron irradiation, radiation biologic effect, tissue physiology, ~~animal experiment~~ BIOLOGIC METABOLISM

ABSTRACT: In order to clarify the effect of neutron bombardment on carbohydrate, energy, and protein metabolism at relatively low doses, the changes in free and bound glycogen, glucose-1-phosphate, glucose-6-phosphate, fructose-1, 6-diphosphate, triose-phosphate, phosphopyruvate, ATP, creatine phosphate, phosphorylase, amylase, succinic dehydrogenase, respiratory quotient, and protein content were determined in the central nervous system, skeletal muscle, and liver of adult white rats 15 - 30 days after total body irradiation with neutrons having energies of 0.04 - 1.35 Mev (total dose of about 13 rad in 60 min).

Card 1/2

L 29835-66

ACC NR: AP6012873

2

While the glycogen content of the brain increased temporarily at 15 days and then decreased progressively, that of muscle decreased only at 15 days. The synthesis of bound glycogen was definitely inhibited 30 days after irradiation, and disruption of the coordination of glycogen metabolism was shown by the phosphorylase and amylase values. There were no significant changes in the phosphorylated intermediates of carbohydrate metabolism, but the reactions from glucose-6-phosphate through fructose-1, 6-diphosphate to triose-phosphate seemed to be inhibited in the brain, while that from glucose-1-phosphate to glucose-6-phosphate was accelerated in skeletal muscle. The levels of ATP and creatine phosphate were unchanged in the brain and somewhat increased in muscle. Although the changes in succinic dehydrogenase and  $QO_2$  were insignificant, there was some increase in protein synthesis 30 days after irradiation. The neutron flux was measured by L. N. Uspenskiy and I. V. Filyushin. Orig. art. has: 5 figures and 5 tables. [08]

Title : Chlorine in Tar and in Its Distillation Products.

Orig Pub : Koks, smola, gaz, 1957, 2, No 1, 32 - 33.

Abstract : The analytical determination of Cl contents in samples of raw tar from Polish by-product-coke works and in products of fractional distillation of these tars was carried out; a tentative balance of Cl distribution among the distillation products was made and it was shown that only 1/3 to 2/3 of chlorine contained in tar passed into pitch and that the

AUTHOR: Kula, Józef, Engineer  
TITLE: Prduction of 1,3,5-xylenol  
PERIODICAL: Chemik, no. 5, 1960, 208

TEXT: The author describes the isolation of the 1,3,5-xylenol isomer (I) from a xylenol (II) fraction boiling between 216 and 223°C. The xylenol fraction with slight admixtures of m- and p-cresol has been used in the industry up to the present for the production of plastics, adhesives, and bakelite, since it forms resins with formaldehyde. Moreover, (II) is used for disinfection purposes, impregnation of wood, and selective refining. Several isomers are used for special purposes, e.g., for light stabilizers, special plastics, intermediate products for dyes, etc. The pharmaceutical team in Warsaw has synthesized a new disinfectant based on (II). The necessity arose of working out a method for the isolation of (I) from the xylenol fraction. A selective extraction with NaOH was used. A stoichiometric volume of 25% NaOH corresponding to 30% (I) was added to

(II) which contained 18% (I). Then the mixture was heated and after stirring cooled to the lowest possible temperature (10-20°C). The crystals were sucked off and centrifuged, washed with NaOH and recrystallized, separated by 30% HCl or H<sub>2</sub>SO<sub>4</sub>, and neutralized with soda. The xyleneol was distilled off. The main fraction contained 90% 1,3,5-xyleneol. The yield amounted to 42%. The product was used for the preparation of 4-chloro-3,5-dimethyl phenol. There are 2 tables.

Prefabricated reinforced-concrete fortifications (Sberny\*ye zhelezobetonny\*ye fortifikatsionny\*ye sooruzheniya) Moscow, Voenizdat, 1963. 109 p. illus. 4500 copies printed. Editor: Mashevskiy, V. F. (Colonel); Technical editors: Chapayeva, R. J.; Proofreader: Komarova, L. P.

TOPIC TAGS: prefabricated structure, reinforced concrete structure, concrete composition, military installations, camouflage, fortification

PURPOSE AND COVERAGE: This brochure is intended for soldiers and both commissioned and noncommissioned officers, as well as for military students. The purpose of the booklet is to acquaint the military reader with designs of prefabricated reinforced-concrete fortifications and the methods of their manufacture and use when erected in position. The brochure also contains many recommendations that may be useful to troops when erecting different structures made of prefabricated reinforced-concrete elements.

TOPIC TAGS: pulse height analyzer, analyzer recorder, analyzer memory, ferrite core memory, current coincidence circuit, transformerless matrix drive

TRANSLATION: The memory of the described apparatus for the recording of a pulse-height analyzer signal employed a current coincidence system. To eliminate the dependence of the reading and writing cur-

Card 1/2

ACCESSION NR: AR4023768

rents on the information in the channel, a transformerless matrix drive is used (the generator currents are fed directly to the coordinate buses of the matrix). The coding system is binary-decimal; the address unit is made of vacuum tube flipflops. The address circuit makes it possible to scan the channels in the forward and backward directions. The data can be read out on an oscilloscope, on neon indicators, or on a number-printing mechanism. Systems for 128 and 256 channels with capacities  $10^5$  and  $10^6$  respectively have been developed. The block diagram of the recorder and the circuit of the matrix drive and other units are presented. Bibliography, 5 titles.

TITLE: Neutron transit-time spectrometer

SOURCE: Pribory i tekhnika eksperimenta, no. 1, 1966, 53-61

TOPIC TAGS: spectrometer, neutron spectrometer

ABSTRACT: A new fast-neutron transit-time spectrometer is described which can  
measure a neutron spectrum from 100 kev to 14 Mev. Monochromatic 14-Mev neutrons are  
produced by a  $T^3(d, n)He^4$  reaction; deuteron energy, 250 kev; deuteron-pulse  
duration, 7 nsec; beam interruption before acceleration is used (sketch supplied).  
The neutron detector and electronic equipment are briefly described. The spectro-  
meter resolution determined from a  $\delta$ -peak is 4 nsec/m; channel width, 2.12 nsec;  
integral nonlinearity, 0.25%. From a time-to-pulse-height converter, the signals are  
fed to a 256-channel analyzer. The resolution time is 8 nsec; transit base, 2 m;  
linear dynamic range, 400 nsec. The photomultiplier is equipped with a noise-  
elimination device, and the detector is well protected from the background noise.

TITLE: A converter of short time intervals with increased linearity.

SOURCE: Def. zh. Fizika, Abs. L2A309

REF SOURCE: Tr. 6-y Nauchno-tekhn. konferentsii po yadern. radioelektron. T. 2. M., Atomizdat, 1965, 15-19

TOPIC TAGS: analog digital converter, pulse code modulation, trigger circuit, tunnel diode

ABSTRACT: The authors describe a converter of short time intervals into a digital code, ensuring an increased linearity and at the same time sufficiently simple circuitry. The converter has no prior "stretching" of short time intervals. The time interval is measured directly by comparison with a number of cycles of oscillations of a known frequency. This method is widely used in microsecond devices, but owing to the lack of reliable high-speed trigger circuits, counting devices, etc., it could not be adopted for the nanosecond region. Such a possibility has been uncovered by the appearance of tunnel diodes with sufficiently high speed. The reference frequency is chosen to be 100 Mcs. To reduce a time channel up to 5 nsec by a factor of 2 compared with the period of the reference series, a special additional device is introduced into the converter circuit. The complete schematic diagram of the converter and different time diagrams illustrating its operation are presented. L. S. [Translation of abstract]
