TITLE: Some data on the detonability of ammonium perchlorate

SOURCE: Fizika goreniya i vzryva, no. 2, 1966, 21-27

TOPIC TAGS: ammonium perchlorate, critical diameter, solid propellant, explosive, ammonium compound

ABSTRACT: Considerable differences in the critical diameter of ammonium perchlorate have been observed between batches produced in winter and summer. This is attributed to the differences in water content. To investigate this problem, experiments were made to determine the effects of initial temperature (20—220°C), the water content, the grain size, and the density on the critical diameter of ammonium perchlorate. The results showed that the critical diameter is an exponential function of the initial temperature. The critical diameter of ammonium perchlorate increases considerably even at low water contents (0.5%), while the critical diameter of trotyl is affected only at high water contents exceeding 4%. Orig. art. has: 8 figures. (PV)

ABSTRACT	: Description of the history of studies of plankton and benthos of water within the Volga flood plain; general characteristics of these bodies of water, and their hydrological and climatic regimen, quali- tative composition of plankton and benthos is character- ized, and their quantitative development, according to this, and their quantitative development, according to this, is described. For the principal bodies of water described, the development of quantitative development of plank- ton is made of quantitative development of plankton in normal action, on the basis of which certain conclusions are drawn concerning the trophic importance of algae in the rivers concerning the trophic importance of algae in the lakes of the plankton. Distribution of benthos in the various bodies of water is considered in connection with the water

TITLE: Electrolytic Reduction of Some Nitroso Compounds of Ruthenium
(Elektroliticheskoye vosstanovleniye nekotorykh nitrozo-soyedi-
nений рутения)

PERIODICAL: Zhurnal neorganicheskoy khimii, 1958, Vol 3, Nr 10, pp 2305-2308
(USSR)

ABSTRACT: The electrolytic reduction of nitroso compounds of ruthenium was analyzed in order to ascertain the state of valency of ruthenium compounds. The method of electrolytic reduction was applied because no impurities are involved in it. An investigation was carried out of the electrolytic reduction of compounds of nitroso-sulfate ruthenium, nitroso-nitrate ruthenium, nitroso-oxalate ruthenium and nitroso-acetate ruthenium. In the electrolytic reduction of compounds of nitroso-oxalate ruthenium with the formula $H_2[RuNO(C_2O_4)_2]$ three jumps appear in the reduction curves. The first indicates the reduction of the NO-group, the second indicates the reduction of Ru-(II) to Ru-(I) and the third indicates the reduction of Ru-(I) to Ru. The electrolytic reduction of nitroso-nitrate ruthenium with the formula $RuNO(NO_3)_2$

Card 1/2

Electrolytic Reduction of Some Nitroso Compounds of Ruthenium S07/78-3-10-13/35

shows only one jump in the reduction curve, probably in the reduction of NO_3^- . The electrolytic reduction of nitroso-acetate ruthenium shows also three jumps in the reduction curve. The first of them is probably not caused by the reduction of the NO_- group, but by the CH_3COO^- ion.

There are 3 figures and 14 references, 4 of which are Soviet.

TITLE: Concerning the Degrees of Oxidation of Ruthenium in Acid Nitroso Compounds (O stepenyakh okisleniya ruteniya v atsidonitrozo-soyedineniyakh)

PERIODICAL: Zhurnal neorganicheskoy khimii, 1958, Vol 3, Nr 12, pp 2662-2665 (USSR)

ABSTRACT: The step-wise oxidation of ruthenium in nitroso-oxalates, nitrates, and acetates with potassium permanganate was investigated using the potentiometric method. By these investigations it was possible to determine the valence state of ruthenium in the following acid nitroso compounds: $H_2[RuNO(C_2O_4)_2]$; ruthenium nitroso nitrate - $RuNO(NO_3)_2 \cdot 3H_2O$; and sodium ruthenium nitrosotriacetate - $Na[RuNO(CH_3COO)_3]H_2O$. In the oxidation potentiometric curve for $H_2[RuNO(C_2O_4)_2]$ there were found five clear and definite jumps in potential, indicating the oxidation of ruthenium from Ru^{2+} to Ru^{8+} . The last jump indicates the oxidation of the $(C_2O_4)^{2-}$ group. The end-product

Card 1/2

Concerning the Degrees of Oxidation of Ruthenium in Acid Nitroso Compounds

SOV/78-3-12-12/36

of the oxidation is RuO_4 . On the oxidation curve for $\text{RuNO}(\text{NO}_3)_2 \cdot 3\text{H}_2\text{O}$ were found potential jumps corresponding to the oxidation of Ru^{2+} to Ru^{8+} . The end-product of this reaction is RuO_4 . The potentiometric oxidation titration curve for $\text{Na}[\text{RuNO}(\text{CH}_3\text{COO})_3]\text{H}_2\text{O}$ is characterized by four jumps in potential, indicating the oxidation of ruthenium from Ru^{2+} to Ru^{8+} . The end-product is again RuO_4 . The ruthenium in all the acidonitroso compounds investigated was divalent. There are 5 figures and 5 references, 3 of which are Soviet.

TITLE: Thermodynamic investigation of some tantalum chlorides

PERIODICAL: Leningrad. Universitet. Vestnik. Seriya fiziki i khimii,
no. 2, 1962, 144 - 151

TEXT: The pressure of saturated and unsaturated tantalum pentachloride vapors between 425 and 1020°K and the thermal stability of tantalum tetrachloride were investigated. $TaCl_5$ was produced by direct chlorination of metallic tantalum with chlorine at 300 - 350°C. $TaCl_4$ was obtained by reduction of $TaCl_5$ with metallic aluminum and sheet tantalum. Sublimation and evaporation of $TaCl_5$ were studied at 425 - 530°K. It was found for the sublimation: $\Delta H = 22.7$ kcal/mole, $\Delta S = 45.2$ entropy units (e.u.), for the evaporation: $\Delta H = 14.9$ kcal/mole, $\Delta S = 29.3$ e.u. A melting temperature of 216°C and a boiling temperature of 235°C were determined from the equations for sublimation and evaporation. The difference in

Card 1/2

B117/B101

Thermodynamic investigation of...

enthalpy and entropy of these two processes was used to calculate heat and entropy of melting of $TaCl_5$; $\Delta H = 7.8$ kcal/mole, $\Delta S = 15.9$ e.u. For the dissociation according to the reaction $(TaCl_5)_{gas} = (TaCl_4)_{gas} + \frac{1}{2} Cl_2$, the following was found: $\Delta H = 33.55$ kcal/mole, $\Delta S = 31.3$ e.u. For the very slow disproportion ($32 - 36$ hr) of $TaCl_4$ according to $2[TaCl_4]_{solid} = [TaCl_3]_{solid} + (TaCl_5)_{gas}$: $\Delta H = 27.0$ kcal/mole, $\Delta S = 48.3$ e.u. When measuring the pressure of gaseous $TaCl_5$ over solid $[TaCl_3]$ in the absence of $[TaCl_4]$ at $450^\circ C$, the conproportion reaction $[TaCl_3]_{solid} + (TaCl_5)_{gas} = 2(TaCl_4)_{gas}$ was observed. In this case, $\Delta H = 33.4$ kcal/mole and $\Delta S = 32.3$ e.u. were determined. Enthalpy and entropy of sublimation of $TaCl_4$ were calculated from the disproportion and conproportion processes: $\Delta H = 30.2$ kcal/mole, $\Delta S = 40.4$ e.u. The results show a satisfactory agreement with published data. There are 2 figures and 2 tables.

TITLE: The Use of Prefabricated Reinforced Concrete for Strengthening the Upper Bank of Dams (Primeneniye sbornogo zhelezobetona dlya krepleniya verkhovogo otkosa plotin)

PERIODICAL: Gidrotehnika i melioratsiya, 1958, Nr 1, pp 46-51 (USSR)

ABSTRACT: The authors describe an experiment in strengthening the upper bank of the dam at the Tyuya-Buguz water reservoir with prefabricated reinforced concrete slabs. A detailed description of the production process as well as the composition of the concrete and the production costs are given. It was found that the factual cost of production was 22% lower than estimated. A further reduction of

Title : Predatory Insects and Nites Which Destroy the
Spider Cotton Nite in Azerbaijan

Orig Pub : Izv. Nauk Sci AzerbSSR, 1957, No 7, 77-87

Abstract : 14 species of predatory insects have been isolated:
Aclytus, *Scyathrips dorsiphagus*,
S. longicornis, *S. latisternum*, *Orius nigra*, *O. cibicidophagus*, *Cyrtonota vulgaris*, *Ch. septempunctata*, *Carisops sp.*, *Scytus nigricans*, *Sc. bipunctatus*, *Sc. frontalis*, *Stethorus punctillum*, *Arthrocera podox* sp. In the end of June a triple treatment
of the test plot with DDT reduced the number of
predatory insects by 43%. The number of spider
nites on the test plot on 23 July was 70 times

AUTHOR: Balezin, S. A.; Kurbanov, F. K.; Podobayev, N. I.

TITLE: Investigation of the protective action of steel corrosion inhibitors in hydrochloric acid as a function of temperature, pressure and acid concentration

SOURCE: Zashchita metallov, v. 1, no. 3, 1965, 337-340

TOPIC TAGS: corrosion inhibitor, steel, hydrochloric acid

ABSTRACT: The authors study the protective action of PB-5 (a product of condensation of analine and urotropin), Katapin A (paradodecylbenzylpyridinium chloride), propargyl alcohol, and mixtures of PB-5 + urotropin, I-1-A (a byproduct from manufacture of 2-methyl-5-ethyl pyridine) + urotropin, and Katapin A + BA-6 (a product of condensation of benzyl amine and urotropin) in 8-20% hydrochloric acid at temperatures of 22-155° and pressures of 1-500 atm. The specimens were made in the form of cylinders 5 mm in diameter and 50 mm long and had the following composition (in wt. %): C--0.47; P--0.022; S--0.030; Si--0.019; Mn--0.70; Ni--0.06; Cr--0.05. It was found that propargyl alcohol, Katapin A, I-1-A + urotropin and PB-5 + urotro

Card 1/2

L 3780-66

ACCESSION NR: AP5014139

pin and Katapin A + urotropin are effective at 110°, while a mixture of I-1-A + Na₂SO₄ is most effective at 130°. A temperature maximum for the inhibiting effect is characteristic of the agents studied. For Katapin and PB-5, this maximum is in the 60-70° range, while the other inhibitors show a temperature maximum at 80-90°. A reduction was observed in the protective action of the inhibitors as the pressure was increased. At higher acid concentrations, the corrosion rate in the presence of inhibitors is also higher. This effect is more pronounced as the temperature is raised. Orig. art. has: 4 figures.

TITLE: Calculation of empirical influence functions for H_{500} forecasting over Tashkent from synoptic processes of Central Asia

SOURCE: AN UzSSR. Institut matematiki. Rosheniye uravneniy gidrotermodinamiki primenitel'no k zadacham meteorologii (Solution of equations in hydrothermodynamics applied to problems in meteorology) Tashkent, Izd-vo FAN UzSSR, 1966, 50-54

TOPIC TAGS: Green function, mathematic matrix, atmospheric geopotential, isobar, weather forecasting, anticyclone, least square method, weather map

ABSTRACT: Forecasting of the geopotential field by using calculated empirical influence functions is applied to the eastern regions of the SSSR. The empirical influence functions for calculation of H_{500} over Tashkent are computed for the northwestern cold-air outbreak and the southwestern periphery of the anticyclone. The data of 15 aerological stations at levels of 850, 500, and 300 mb were used. A system of 45 equations with 45 unknowns is solved by transformation of the matrix

TITLE: Study of the subtropical tropopause discontinuity over the northern hemisphere

SOURCE: AN UzSSR. Institut matematiki. Resheniya uravneniy gidrotermodinamiki primenitel'no k zadacham meteorologii (Solution of equations in hydrothermodynamics applied to problems in meteorology) Tashkent, Izd-vo FAN, UzSSR, 1966, 62-72

TOPIC TAGS: tropopause, atmospheric model, atmospheric wind

ABSTRACT: Discontinuity between polar and tropical tropopause over northern hemisphere was investigated by plotting the charts of the southern boundaries of the polar tropopause and the northern boundaries of the tropical tropopause. The method consisted of replotted the latitude of the points of intersection of the extreme southern isobars of the polar tropopause with the meridians (in multiples of 5°) at every 5° of the longitude, using the data from daily maps of tropopause. The charts of recurrence of the locations for the southern boundaries of polar tropopause were obtained by replotted the latitudes of the intersection points daily for a month. The results are shown in Fig. 1. The recurrence charts for the northern boundaries of the tropical tropopause were drawn in an analogous manner. With these charts it is possible to establish the number of cases of double tropo-

pause. By superimposing the recurrence map of the southern boundary of the polar tropopause over the maps of the northern boundary of the tropical tropopause (for the same month), it is possible to estimate the average monthly width of an overlapping zone for both tropopauses in their discontinuity zone. The main boundaries of the tropopause were found to coincide with the location of the average current flow (of the maximal wind) at subtropical latitudes. It was also established that the overlapping zone of the tropopause is to the north of the axis of the current flow. Orig. art. has: 4 figures.

SOURCE: Veterinariya, no. 11, 1965, 45-46

TOPIC TAGS: mouse, animal disease, virus disease

ABSTRACT: After an outbreak of ornithosis among parrots of three varieties kept in common quarters with other birds, one apparently healthy parrot of each variety was examined. A suspension of lungs, liver, and spleen was injected intracerebrally into white mice. Once adapted to white mice, the virus was inoculated into a culture of chicken fibroblast cells for a study of the development and morphology of inclusions. It was found that the virus of ornithosis was isolated from the spleen of apparently healthy parrots and that healthy parrots could serve as vectors. The author concludes with recommendations for quarantine and treatment with antibiotics. [JPRS]
