Zhurnal obshchey khimii, 1959, Vol 29, Nr 7, pp 2355-2359 (USSR)

ABSTRACT:

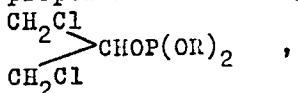

Interaction of alcohols with  $\text{PCl}_3$  yields alkyldichlorophosphites, dialkylchlorophosphites, dialkylphosphorous acid, and trialkylphosphites depending on the nature of the radical, the presence of substituents, and reaction conditions. Treatment of chlorine- and cyanine-substituted alcohols (Refs 2, 3 respectively) with  $\text{PCl}_3$  gives acid chlorides of phosphorous acid and in some cases phosphites. The  $\alpha$ , $\gamma$ -dichlorhydrin of glycerin was used for this investigation. The compound reacted with  $\text{PCl}_3$  at room temperature and gave the following compounds: The acid dichloride of  $\beta$ , $\beta'$ -dichloroisopropylphosphorous acid (22%), the acid monochloride of di- $\beta$ , $\beta'$ -dichloroisopropylphosphorous acid (25.4%), and the di- $\beta$ , $\beta'$ -dichloroisopropyl ester of

$\beta$ ,  $\gamma$ -dichloropropylphosphinic acid (9.8%). According to M. I. Kabachnik and P. A. Rossiyskaya (Ref 4), the latter is formed by an inter- or intra-molecular isomerization of the tri- $\beta$ ,  $\beta'$ -dichloroisopropylphosphite. The reaction of the  $\alpha$ ,  $\gamma$ -dichlorohydrin of glycerin with  $\text{PCl}_3$  is demonstrated in the scheme given. The intact phosphorous ester, which was not obtained in pure form, reacted with cuprous chloride. This may be regarded as proof of the existence of phosphite in the solution (Ref 5). The acid monochloride of di- $\beta$ ,  $\beta''$ -dichloroisopropylphosphorous acid was saponified with water, and the resulting substituted phosphorous acid condensed with aldehydes and ketones. The acid dichloride of the same acid was used for synthesizing the mixed esters of phosphorous acid by treatment with aliphatic alcohols in absolute ether in the presence of pyridine at  $-6 - 0^\circ$  (yield 47-65%). The physical properties of the synthesized esters are given in table 1

TITLE: On the Reaction of Dialkyl-phosphorous Acids With Aldehydes and Ketones. XXI. Di- $\beta,\beta'$ -dichloro-isopropyl Esters of the Substituted  $\alpha$ -Oxymethyl-phosphinic Acid

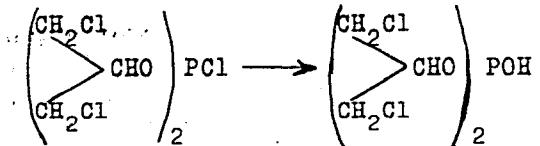

PERIODICAL: Zhurnal obshchey khimii, 1959, Vol 29, Nr 8, pp 2551-2553  
(USSR)

ABSTRACT: The authors continued their investigations concerning the synthesis of different  $\alpha$ -oxyalkyl-phosphinates by condensation of the dialkyl-phosphorous acids with carbonyl compounds (Ref 1), and extended them to the di- $\beta,\beta'$ -dichloro-isopropyl-phosphorous acid. They found previously (Ref 2) that condensations which lead to the formation of chlorine-substituted  $\alpha$ -oxyalkyl-phosphinates take place also without catalysts at room temperature. The condensation of the  $\beta,\beta'$ -dichloro-isopropyl-phosphorous acid, and other acids with chlorine atoms in the ester radicals of different structure, is very interesting. The above-mentioned acid was obtained by action of water on the corresponding acid chloride:

On the Reaction of Dialkyl-phosphorous Acids With Aldehydes and Ketones.  
XXI. Di- $\beta,\beta'$ -dichloro-isopropyl Esters of the Substituted  $\alpha$ -Oxymethyl-phosphinic Acid

The condensation of this acid with aldehydes and ketones was mostly carried out by mixing equimolar quantities of the reactants, without catalyst, at room temperature. The end products were best separated if they were crystallizable. The formation of a compact crystalline mass indicates the end of the reaction. The data of the esters recrystallized from 96% alcohol are presented in the table (NN° 1-5), in addition to the di-tert.-( $1,1,1$ -trichloro)-butyl esters hitherto unknown of the  $\alpha$ -oxy- $\beta$ -chloro-isopropyl-phosphinic and  $\alpha$ -oxy- $\beta,\beta'$ -dichloro-isopropyl-phosphorous acids (NN° 6,7). The condensation products of the di- $\beta,\beta'$ -dichloro-isopropyl-phosphorous acid with acetic, propionic, butyric, and isovaleric aldehyde, cyclopentanone, etc., resulted in the form of sirupy liquids the purification of which was difficult. There are 1 table and 2 Soviet references.

TITLE: Features of the temperature dependence of the magnetization of thulium ortho-  
ferrite  
SOURCE: Zhurnal eksperimental'noy i teoreticheskoy fiziki. Pis'ma v redaktsiyu.  
Prilozheniya, v. 2, no. 6, 253-256 21, 44, 55 21, 44, 55  
TOPIC TAGS: thulium compound, temperature dependence, magnetization, magnetic moment  
ABSTRACT: The authors observed an anomalous temperature dependence in the magnetiza-  
tion of thulium orthoferrite. When the temperature was reduced to 90K the magnetic  
moment was reoriented from the c axis to the a axis of the crystal. Below 90K, the  
spontaneous magnetic moment of the single-crystal thulium orthoferrite remained ri-  
gidly oriented along the a axis of the rhombic crystal. By plotting the rotary mo-  
ments in the (001) plane of the single-crystal thulium orthoferrite at temperatures  
78 to 4.2K, the authors obtain, from the rotary moment  $\varphi = 90^\circ$ , the values of the  
magnetization at different temperatures. The temperature dependence thus obtained  
for the magnetization is shown in Fig. 1. At 92K the spontaneous magnetization along  
the a axis is zero for at this temperature the magnetic moment is still oriented  
along the c axis of the crystal. After a slight decrease in the temperature ( $\sim 2^\circ$ ),

TITLE: (3P418) Morphological changes in the skin under the influence of low temperature and irradiation

CITED SOURCE: Sb. tr. Sverdl. med. in-t, vy\*p. 39, 1963, 95-109

TOPIC TAGS: radiation, frostbite, skin, skin morphology, radiation damage

ABSTRACT: Twenty guinea pigs were subjected to x-irradiation of doses of 500 r, as well as to low temperature (frostbite, II-III degree). The morphological changes in the skin were found to be more extensive after combined treatment than after frostbite alone, in agreement with a more severe clinical course of the disease. After the first day the morphological skin changes were the same in animals receiving frostbite plus irradiation and frostbite alone. Three days after combined injury, the number of macrophages was lower than after frostbite

Card 1/2

ACCESSION NR: AR4027238

alone and the disintegration of the leukocyte barrier was delayed. On the fifth day after combined injury, acidophilic granules were observed in the cytoplasm and on the surface of neutrophils; these were not observed after frostbite alone. On the seventh day there was delayed sloughing of tissues, a decrease in the rate of growth of the epithelial layer, and small numbers of acidophilic granules. On the 10th day there was relatively low phagocytic activity. The regenerative power of the tissues was not suppressed by combined treatment.

The simplified determination of carotene according to  
G. M. Natadze. Yu. G. Leder. *Gigiena i Sanit.* 1951,  
No. 6, 37-41.—The Natadze method (*C.A.* 42, 1384d) was  
reexamined. The use of absorbent cotton is unsatisfactory  
for obtaining pure carotene solns. and should be replaced  
with freshly ppid.  $\text{CaCO}_3$  or  $\text{Ca(OH)}_2$ . Colorimetry of the  
initial ml. of filtrate with cotton gives higher than normal  
results. The necessity for using a colorimeter instead of a  
permanent color scale makes the method unsuitable for  
field use.

ABSTRACT : The silage qualities of the oil sunflower  
variety, hybrid variety G-1219 and the ini-  
tial variety 1646 were investigated. The  
average maturing varieties surpassed the  
rapid ripening in roughage productivity.  
The greatest accumulation of non-nitrogen ex-  
tracts, ash, Ca, P and K were character-  
istic of the initial stages of ripening in  
both varieties. The greatest amount of caro-  
tene in the green mass occurred at the com-

TITLE: Present stage of wide-strip hot rolling

SOURCE: Metalurgia, no. 1, 1966, 31-45

TOPIC TAGS: rolling mill, hot rolling, automation, industrial production, industrial statistic

ABSTRACT: An analysis of modern strip rolling mills, discussing their design and degree of automation, raw materials, production assortment and prospects for the near future. A seven-page table lists all mills of this type throughout the world, giving their main characteristics: type, year started to operate, strip dimensions and roll weight, rolling speed, installed power and production capacity. Orig. art. has: 5 tables. [Based on author's Eng. abst.] [JPRS: 36,646]

100V/6-5-8-14/13  
Investigating the Chlorine Complexes of Rhodium by Electrophoresis and Ion-exchange Chromatography as Well as by Ion-Exchange Chromatography

into six different complexes: one complex of the formula  $Rh(H_2O)_6^{3+}$ , two cation complexes, two anion complexes as well as the complex  $RhCl_6^{3-}$ .

The unstable yellow rhodium chloride solution is probably a polynuclear cation complex.

The method of paper chromatography using butanol-HCl solution is employed to separate Rh-Pd and Rh-Pt. The different complex types are without importance, as all of these complexes have almost the same travelling rate. Separation of the metals mentioned above by electrophoresis is impossible. This is a translation of an English-language paper; no reference is given. Translator: S. I. Polmyakova. There are 7 figures and 7 references, 6 of which is Soviet.

"Methylene Blue in Therapy of A Type of Symptomatic Depression."

Prague, Activitas Nervosa Superior, Vol 5, No 2, May 63; pp 180-181.

Abstract : Methylene blue 450 to 800 mg. daily to 15 arteriosclerotic depressive patients aged 50 to 71 (average 58.3) resulted in a very significant degree of improvement in 4, partial in 9 after 2 to 5 weeks of such treatment. Side effects pollakiuria and stranguria; analgesic effects also prominent in decrease of headaches. Further studies are urged.

"Experience with Fluphenazine in the Treatment of Anxiety in Endogenous Depressions (Oriental Comparison with Chlorpromazine by Means of an Intensive Double-Blind Project.)."

Prague, Ceskoslovenska Psychiatrie, Vol 62, No 4, Aug 66, pp 254 - 257

Abstract [Authors' English summary modified]: 8 women were treated for endogenous type depressions by standard doses of imipramine, and the therapeutic effect of fluphenazine and chlorpromazine on the anxiety aspect and on the overall clinical condition of the patients was studied. Comparison of the two drugs was made on the basis of the Chassan double-blind test. No significant differences between the effect of the two drugs were found. Economical advantages of the method are discussed. 1 Table, 14 Western, 1 Czech reference. (Manuscript received 24 Apr 65).

TITLE: Computation of apparent star places by punched card machines.  
Summary.

PERIODICAL: Referativnyy zhurnal, Astronomiya, no. 1, 1963, 13,  
abstract 1.51.111 ("Compte rendu 1-er sympos. internat. calculs  
géod. Cracovie, 1959", Cracow, 1961, 321, English and German)

TEXT: It is reported that the Astronomical Computation Institute at Heidelberg has been calculating, since 1960, and publishing the apparent places of 1535 stars from the FK3 catalogue ("Apparent Places of Fundamental Stars"), as well as the apparent places of stars for the astrolabe in Paris and FZT at Neuchâtel. Calculations are conducted on an IBM 626 electronic computer in combination with punched card machines.

ORG: Psychiatric Hospital, Horni Berkovice (Psychiatricka lecebna)

TITLE: Contribution to a retrospective assessment of treatment in endogenous depressions [This paper was presented at the 7th Annual Psychopharmacological Meeting, Jesenik, 20-23 January 1965.]

SOURCE: Activitas nervosa superior, v. 7, no. 3, 1965, 292

TOPIC TAGS: drug treatment, psychoneurotic disorder

ABSTRACT: During a 5 year period, patients with endogenous depressions represented 6.52% of the total admissions to authors' hospital. The ratio of male to female patients was 1:3.7. The largest number of patients were in the 50-60 year group. The average length of hospitalization was 41.2 days; use of imipramine reduced this to 36.1 days; use of convulsions required 46.0 days. "Appearance, Frequency and Therapy of Tuberculosis of the Eye in Our Clinical Experience"

Radovi Medicinskog Fakulteta u Zagrebu, Vol 14, No. 1, 1966; pp 1-10

Abstract [German summary modified]: Review of data on 1061 cases of tuberculosis of various parts of the eye seen in patients at the authors' clinic 1923 to 1940; 655 cases seen in 1946 to 1961; 187 seen in 1956 to 1964; data by 9 diagnostic classifications. Usual treatment is now isoniazid, paraminosalicylic acid and streptomycin. Of the 187 patients treated in Sljeme Hospital for tuberculosis 1963 to 1964, 94 were improved, 86 unchanged, and 9 worse. 4 tables, 6 Western, 2 Yugoslav references. Manuscript received 15 December 1965.

"X-Ray Changes in Metastatic Tumors of the Brain"

Belgrade, Srpski arhiv za celokupno lekarstvo, vol 93, no 12, 1965, pp 1123-1135

Abstract: Two-thirds of the intracranial metastatic tumors are verified by histological examination following extirpations. Also, the author cites that approximately two-thirds of all metastatic tumors have their primary sites in the lungs, kidneys, and breasts. Detailed presentation is given of diagnostic and differential-diagnostic possibilities of intracranial metastatic tumors, especially in relation to primary intracerebral tumors and pseudotumors. 2 Yugoslav, 6 western references. Manuscript received 31 Aug 65.

"The Ability to Reproduce Cortical Auditory Responses in Waking  
Cats."

Prague, Activitas Norvosa Superior, Vol 8, No 2, Jun 66, p 178

Abstract: Changes in the ability to reproduce cortical auditory responses in waking cats at different time intervals were determined by means of implanted electrodes. Electrodes were implanted in 8 adult cats in the auditory, occipital, and frontal areas. Experiments were carried out for a month, beginning on the first day after the implantation. Increasing frequency of stimulation decreases the amplitude of EP both in anesthetized and non-anesthetized animals. The relative decrease in individual components is identical in different periods after implantation. No difference in the ability to reproduce cortical responses was found between anesthetized and waking cats. 1 Figure, no references. Submitted at the 4th Interdisciplinary Confer. of Exper. and Clin. Study of Higher Nerv. Functions at Marianske Lazne, 12-15 Oct 65. Article is in English.
