

LUCHTER, Anna

✓ Petroleum prospecting by microbiology. Anna Luchter
(High School Economics, Krakow, Poland). "Petroleum"
(London) 21, 282-5, 290 (1958); cf. *Zeszyty Nauk Akad.*
Górniczo-Hutniczej No. 9, *Geol.* No. 1, 45-50 (1956).—The
presence of petroleum deposits was inferred from the growth
of bacterial cultures (1) prep'd. from soil samples taken from

shallow holes in the area explored. They were grown in an air-
propane atm. as the sole C source. Development of a rela-
tively large no. of cultures from a given soil sample was
shown to indicate the presence of petroleum. Problems con-
nected with this test are: (1) 20-30-day period required
for test and (2) development of a detn. of the activity or
amt. of hydrocarbon-consuming bacteria. W. I. Burnet

1517. Geomicrobiology in petroleum industry. A.
Luchterowa. Bull. (Polish) Inst. Petrol. (Supplement to Nafta (Krakow), 1952, 8), 1952, 2, 7-8.—
Geomicrobiology is being employed to solve the questions of origin of petroleum, its separation from sedimentary rocks, and petroleum prospecting. The various breeds of bacteria are briefly described; their appearance in known oil-bearing areas points to a new way of prospecting. The metabolism of various kinds of these bacteria enables some to reduce sulphates, some to consume paraffins, others to oxidize aromatics; paraffins with 10 to 16 C atoms are easiest to attack. The presence of gaseous paraffins in subsoil over petroleum reservoirs is affected by them. In the Soviet Union some 18,000 samples, half from known areas, are being correlated with the known subterranean structure.

Luchterows A. Microbiological Method of Oil Reservoir Exploration.
"Przegl. Nauk. Politek. Gdanska", 1953, No. 1, pp. 217-220.

Research carried out in the U.S.S.R. has revealed that the microbiological method of oil reservoir exploration is likely to yield good results. The author specifies the principles adopted by the Petroleum

Institute in Poland in taking use of this method, and quotes the results of laboratory tests carried out over the method of drawing samples of soil for test purposes, over bacteria cultures and isolation of bacterial strains. Tests over bacteria cultures were made in the presence of such liquid hydrocarbons as mineral oil, paraffin, petrol and paraffin oil, as well as in the presence of gaseous hydrocarbons (methane or propane-air mixtures).

TITLE: Transmission of emergency signals in supervisory-control systems

SOURCE: Avtomatyka, no. 6, 1964, 55-59

TOPIC TAGS: supervisory control, emergency signaling

ABSTRACT: The term "emergency signals" refers to the spontaneous change of state of a controlled plant or to a deviation of the controlled parameters from normal. The problem is considered of making the information capacity of a supervisory-control system larger when the system is called on to handle emergency signals; various methods of the transmission of emergency signals are discussed and evaluated. A method of emergency-signal transmission is described in which a fast distributor installed at the plant searches for the source of the signals and encodes them. Such a transistorized distributor is described in

TITLE: The operation of a switching phase-sensitive circuit with a capacitance load in
the selection circuits

SOURCE: Avtomatyka¹⁰, no. 4, 1965, 60-64

TOPIC TAGS: switching circuit, telemetry, circuit theory

ABSTRACT: The article examines the possibility of employing a switching phase-sensitive circuit for the separation of frequency signals of telemechanics. A description is given of various modes of operation of this circuit and analytic expressions are presented for the output voltage of the circuit under these modes of operation. It is shown that the phase-sensitive circuit under certain conditions has frequency characteristics which coincide with the resonance curves of an LC single circuit. An analysis is presented of the operation of the circuit with its input under the action of the voltage of a signal the frequency of which is a multiple of the frequency of the controlling voltage.

TITLE: A method for converting the amplitude of an alternating sinusoidal voltage into digital code. Class 42, No. 178180 [announced by Institute of Cybernetics AN UkrSSR (Institut kibernetiki AN UkrSSR)]

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 2, 1966, 119

TOPIC TAGS: analog digital converter, phase meter, coding

ABSTRACT: This Author's Certificate introduces a method for converting the amplitude of an alternating sinusoidal voltage into digital code. To simplify the conversion and improve the accuracy, the voltage to be converted is added to an alternating sinusoidal reference voltage which is shifted by an angle of very nearly 90°. A digital phase meter is then used for converting the phase difference between the resultant voltage and the reference voltage to digital code.

TITLE A Frequency Supervisory Control Device with Synchronous Filters.
(Chastotnoye ustroystvo teleupravleniya s sinkhronnymi fil'trami-
-Russian)

PERIODICAL Elektrichestvo, 1957, Nr 9, pp 23 - 27 (U.S.S.R.)

ABSTRACT A remote-control device with a frequency code was worked out at the Faculty for Electrification of the Ukrainian Agricultural Academy. It is of low capacity and can be used for the control of objects spread over a large area. It consists of single-type blocks which in themselves are combined to an audio-frequency generator of low power and a narrow-band filter which,however, is not based on resonance phenomena but on the synchronism of the signal frequency and on that of the local generator. This filter is described in detail by the authors in A,1956,Nr 10. The new plant was installed in the agricultural energy system Korsun' - Shevchenko in July 1956 and has been working without disturbances until now. After this Luchuk A.M., developed a synchronous filter with crystal triodes. The description of a filter generator with crystal triodes is given and the problem of the possible capacity of installations with such a filter is investigated. The principle of this filter is as follows: the executing relay of the filter reacts only if the frequency of the arriving signal coincides with that of the local generator. As, however, such a coincidence is

Card 1/2

105-9-5/32

A Frequency Supervisory Control Device with Synchronous
Filters.

little probable, the phenomenon of taking account of the local-generator frequency by the frequency of the arriving signal in those cases where their difference is small, is utilized. Therefore the zone of response is determined by the zone of capturing. The apparatuses described here can easily be produced according to the newest process for the production of radio apparatuses. There are 2 figures and 4 Slavic references.

TITLE: Postvaccinal reactions in children vaccinated with DTP trivaccine

SOURCE: Microbiologia, parazitologia si epidemiologia, v. 11, no. 2, 1966, 163-172

TOPIC TAGS: epidemiology, encephalitis, vaccine, virus disease, immunity

ABSTRACT: In a study to determine the severity and frequency of postvaccinal reactions to the use of DTP trivaccine, the authors found that only one of the 239 cases of encephalitis, meningoencephalitis and meningitis with clear fluid which occurred in children born in 1960 through 1964 in Bucharest showed a possibility of a causal connection with the vaccination; this gives a probability of post-vaccination encephalitis of 1:200,000. Vaccination reactions (slight to medium) appear within 12 to 24 or at most 48 hours and disappear without treatment. Orig. art. has: 3 tables.

TITLE: Energy analysis of the operation of an antiparallel-connected thyatron circuit with a resistive load

PERIODICAL: Referativnyy zhurnal. Avtomatika i radioelektronika, no. 7, 1962, abstract 7-5-66 i (Zesz. nauk. Politechn. Łódzka, no. 34, 1961, 3 - 10 [Pol.; summaries in Rus. and Ger.])

TEXT: The article contains a mathematical analysis of an antiparallel rectifier circuit. The circuit, which is intended for a smooth variation of the current, voltage or power of single-phase alternating current, can be used as an auxiliary continuous-action stage in illumination-control equipment, as well as for manual and automatic temperature control in electrical heating equipment etc. It consists of two thyatrons triggered successively with equal firing angles. Since the cathodes of the two triodes are not found at the same potential, while the control of the thyatrons must be carried out synchronously, one cannot use for a smooth control, methods based on the principle of the phase-controlled rectifier. The article also contains a diagram of the circuit and a table of its characteristics.

sed on smoothly varying d.c. component of grid voltage. In the case given, the control is carried out by means of a sinusoidal or pulsed voltage applied to the grid and by simultaneously varying the phase of the grid voltages of the two thyratrons. The power consumption, losses and efficiency are calculated as functions of the firing angle. 2 references. (Politechnika [Łódzka] Katedra Elektroniki Przemysłowej, Poland). TITLE: Semiconductor Thyatrons²⁵

PERIODICAL: Przegląd Elektrotechniczny, 1960, No. 8, pp. 317 - 321

TEXT: Multilayer semiconductor thyatrons are described and 3 US types are shown in Figures 1a, 1b and 1c. The price reduction of the C 35 B silicon rectifier produced by General Electric is shown in Figure 2. The basic principle of P-N-P-N semiconductor devices is explained and functional symbols used by some US producers are shown in Figure 3. Voltage characteristics for small and heavy currents are shown in Figures 4 and 5 and data on ZI-39A rectifiers with different cooling characteristics in Figure 6. Switch-type semiconductor thyatrons are explained and schematic diagrams shown in Figure 7. Their use in parallel and series connection is shown in Figure 8 and a single phase and bridge-type rectifiers in Figures 9 and 10. Wiring diagrams of reversed control steering devices are shown in Figures 11 and 12. Possibilities of development are mentioned and shown in Figures 13 - 16. Data of tubes and magnetic switches are compared with those of similar transistor type devices in Table 1. There are 16 figures, 1 table and 23 references: 19 US, 2 German, 1 French and 1 Polish.

AUTHOR: Luciński, Jerzy

TITLE: Properties of the thyration inverse-parallel control circuit with inductive load

PERIODICAL: Archiwum automatyki i telemechaniki, v. 6, no. 4, 1961,
463-471

TEXT: A thyration inverse-parallel control circuit used for current or power control in single-phase systems, its control characteristics, efficiency and power factor are analyzed. The basic circuit, load current waveforms and equivalent circuits of the system are shown in Fig. 1; the thyratrons which work alternately are controlled by independent circuits, U.St.1 and 2, with identical firing angles Θ_z ; in the equivalent circuits the thyratrons are replaced by switches closed in accordance with the firing angle. The instantaneous value of the load current is expressed by \checkmark

Card 1/7

Properties of the...

P/031/61/006/004/008/010
D271/D301

$$i = \pm \frac{\sqrt{2} V_z}{\sqrt{R^2 + (\omega L)^2}} \left[\sin(\omega t - \varphi) - \sin(\theta_z - \varphi) e^{-\frac{R}{\omega L}(\omega t - \theta_z)} \right] \quad (1)$$

which is valid for $\theta_z < \omega t < \theta_g$, where θ_g is the extinction angle determined by the boundary condition

$$(i) \omega t = \theta_g = 0 .$$

The minimum possible value of the firing angle is equal to the phase angle between applied voltage and load current; at this critical value, the system is driven fully, and the conductance angle is 180° . The range of control is $\varphi \leq \theta_z \leq 180^\circ$. The RMS value of the load current is

Card 2/7

32209
P/031/61/006/004/008/010
D271/D301

$$I = \frac{U_z}{Z} \sqrt{\frac{A(\theta_z, \varphi)}{\pi}},$$

where $A(\theta_z, \varphi)$ becomes

$$A(\theta_z) = \pi - \theta_z + \frac{1}{2} \sin 2\theta_z \quad (4)$$

for resistive loads, and

$$\begin{aligned} A(\theta_z) = & \theta_g - \theta_z + \frac{1}{2} \sin 2\theta_g + \frac{3}{2} \sin 2\theta_z - 4 \sin \theta_g \cos \theta_z + \\ & + 2(\theta_g - \theta_z) \cos^2 \theta_z \end{aligned} \quad (5)$$

Card 3/7

Properties of the...

32209
P/031/61/006/004/008/010
D271/D301

for inductive loads. The RMS load current normalized in terms of the full drive current is

$$\frac{I}{(I)}_{\theta_z = \varphi} = \sqrt{\frac{A(\theta_z, \varphi)}{\pi}} . \quad (6)$$

Measured and computed characteristics $I = f(\tan \varphi, \theta_z)$ are shown for $\tan \varphi = 0$; $\tan \varphi = 1$; $\tan \varphi = 2$; $\tan \varphi = \infty$; and θ_z varying between 0 and 180° . Efficiency of the system is

$$\eta = \frac{P}{P_s} = \frac{1}{\Delta U_a \frac{2(\cos \theta_z - \cos \theta_g)}{\sqrt{2} U_z A(\theta_z, \varphi) \cdot \cos^2 \varphi}} \quad (11)$$

Card 4/7

32209

P/031/61/006/004/008/010
D271/D301

Properties of the...

where ΔU_a is voltage drop in the thyratron. Efficiency characteristics are shown as a function of the firing angle, for three values of φ , and include a characteristic of the system making use of semi-conductor thyatron. The power factor of the system is

$$K_p \approx \cos \varphi \sqrt{\frac{A(\theta_z, \varphi)}{\pi}} . \quad (13)$$

In the case of full drive, the power factor is virtually equal to that of the load; it falls rapidly as the firing angle increases. Characteristics of load current and power are steeper for inductive than for resistive loads; in practice, the lower limit of control is $\theta_z = 135^\circ$. When the system is controlled by short pulses, load current is interrupted when the firing angle has been lowered just below the critical value; with an

Abstract : The toxicity of verindale (V) (contains 1.64% of Y-BCH) and of "inse" (contains 2.4% and 1.54% of Y-BCH) was studied on various supply pests in comparison with ecatox (a parathion preparation). Most effective was V, followed by 2.4% inse and then by 1.5% inse. The difference in the death rate of insects of various species is so small that it may be neglected. The high insecticidal property of V permits its use as a standard in investigating domestic BCH preparations.

Aerodynamic forces acting on a harmonically oscillating profile
in the case of circulation discontinuity in the vortex trail.
Archiw bud masz 9 no.2:275-294 '62.

ACCESSION NR: AP4038926

P/0032/64/011/001/0179/0186

AUTHOR: Luojanek, Wieslaw (Warsaw)

TITLE: Influence of nonuniformity of eddy transport velocity behind a harmonically vibrating airfoil upon the aerodynamic forces acting on the airfoil

SOURCE: Archiwum budowy maszyn, v. 11, no. 1, 1964, 179-186

TOPIC TAGS: aerodynamics, hydrodynamics, aerodynamic force, eddy velocity, vortex trail, airfoil, flutter, aircraft stability, transport velocity

ABSTRACT: The heretofore employed aerodynamic coefficients describing the forces acting on a wing were deduced on the assumption that the eddies flowing from an airfoil create an infinitely long trail along which the circulation and eddy transport velocity amplitudes are constant. This assumption does not hold in practice, however. As the result of viscosity, the vorticity amplitude in the trail diminishes in proportion to the increasing distance from the airfoil, and the presence of the remaining aircraft structural elements such as the fuselage or control surfaces constitutes an additional source of disturbances to the vortex trail. The author considers the problem of the flow-around of a harmonically vibrating airfoil in an inviscid and incompressible flow for the case where the eddy transport velocity

Card 1/2

ACCESSION NR: AP4038926

behind the airfoil is not constant. The problem was solved by a method analogous to the one described by the author in a previous paper (W. Lucjanek, "Sily aerodynamiczne na harmonicznie drgajacym profilu w przypadku niesciaglosci cyrkulacji w sciezce wirowej za profilem (Aerodynamic forces acting on harmonically vibrating airfoil for the case of discontinuity of circulation in the vortex trail behind the airfoil), Archiwum Budowy Maszyn, PWN, Warsaw, 1962, II). The influence of a jump-like change in the eddy transport velocity upon the aerodynamic derivatives of the lift in point of a perpendicular shift to the direction of the flow and in point of the shift rate was discussed. The frequency parameter as well as the magnitude of the jump and its distance from the airfoil were taken as the independent variables. Orig. art. has: 4 figures and 17 equations.
