Title : Investigation of the Moisture of the Seeds of Our Forest
Tree-Shrub Species

Orig Pub : Gorsko stopanstvo, 1956, 12, No 4, 156-161

Abstract : Work was conducted on the Sofia control-seed stations. Seeds of 56 tree-shrub species which grow in Bulgaria were investigated. Depending on the percentage of average moisture, all species are divided into 7 groups: I - 6-8, II - 8-10, III - 10-12, IV - 12-14, V - 14-16, VI - 16-18 and VII - 22-24%. How marked a dependence there is between the average moisture and technical germination of the seeds was not established. -- L. K. Artyukhova.

Title : The Microelement Content of Several Marshy Soils of the Estonian SSR

Orig Pub : Izv. Akad Nauk EstSSR, ser. biol., 1956, 5, No 4, 333-342

Abstract : The Cu, B, Mn, and Co content of 50 samples of 16 bog-peat soils of the Estonian SSR was measured. The total Cu content in the soil to a depth of 40 cm. comprises 0.5-11.0 mg./kg., while of this 0.1-1.4 mg., and in some cases up to 3.5 mg./kg. is extractable. The B content varies between 0.2 and 27.6 mg./kg. and the Co content between 0.1 and 1.0 mg., in isolated samples up to 2.6 mg./kg. The Mn content varies between 0.002% and 0.14%. In vegetation

TITLE: Motion pictures of synoptic processes as a study method in synoptic climatology

SOURCE: Leningrad. Glavnaya geofizicheskaya observatoriya. Trudy, no. 198, 1966, Voprosy obshchey i sinopticheskoy klimatologii (problems of general and synoptic climatology), 160-167

TOPIC TAGS: weather ~~of forecasting~~ *forecasting*, ~~of a display~~ *circulation*, ~~weather map~~ *weather map*, motion picture, atmospheric ~~process~~ *display*

ABSTRACT: A method of study and display of atmospheric processes is proposed, in form of moving pictures based upon multiplicative films, rendered in color kinematography, of synoptic map sequences. Of particular interest is considered moving picture display of important weather phenomena, such as droughts and storms, as well as typical events of atmospheric circulation, cloud system evolution, precipitation zone development and so forth. The use of accelerated and as decelerated motion pictures is suggested with their use as a forecasting and as an educational tool. At a speed of 10 daily weather maps per second, a review of e.g. a 15-year period of synoptic processes can be presented in 5.7 minutes. The films should be combined with explanatory sound. For educational purposes, synoptic frames can be interspersed with ground photography related to

TITLE: Structural changes during tempering of molybdenum- and vanadium-alloyed heat-resistant 12% Cr steels

SOURCE: Kovove materialy, no. 6, 1964, 505-521

TOPIC TAGS: molybdenum alloyed steel, vanadium alloyed steel, heat resistant steel, chromium steel

ABSTRACT: A detailed study was conducted of the structural changes which take place in the delta ferrite during the tempering of modified 12% Cr steels. It was found that in both molybdenum- and vanadium-modified steels, secondary hardening of the delta ferrite during tempering at 450-750C for a maximum of 100 hr is caused by the precipitation of the M₂X phase and V(C,N); in molybdenum-modified steels only, such hardening is caused by the precipitation of the M₂X and Cr₂N phases. During tempering at temperatures near 600C,

TITLE: A method of measuring bending moments using a model of a flat rod structure without intersections

SOURCE: Częstochowa. Politechnika, Zeszyty naukowe, no. 21, Nauki podstawowe, no. 4, 1962, 105-109

TEXT: The method enables the measurement of the bending moment at an unloaded section of a straight rod using three mirrors and an auto-collimator. The method gives very accurate results and may be applied to direct analysis of structural models. There are 4 figures.

ASSOCIATION: Politechnika Częstochowska (Częstochowa Polytechnic Institute) Katedra Mechaniki i Wytrzymałości Materiałów (Department of Mechanics and Strength of Materials)
