AUTHOR: Misko Karel Candidate of Science

TITLE: Soviet analyzers of mercury vapors in the air

PERIODICAL: Sdelovaniya tekhnika no 2 1961 72

TEXT: The article describes instruments for the detection of mercury vapor in the air, installed at Soviet research sites, which were observed by the author during his stay in Moscow. The most advantageous instrument is the UGA 2 universal gas absorber. It operates on the principle of air being forced by an electric blower at a rate of 18 lit/min through an absorber filled with a suitable solution (iodine and potassium iodide). The air stream atomizes the absorbent, so that the poison is entirely trapped and samples can be taken within 6 minutes. The UGA 2 can also be used for detection of other poisonous pollutions of the atmosphere: nitrogen sulfide, chlorine, sulfuric acid, tetraethyllead by subsequent colorimetric analysis. The light-weight instrument is self-contained in a wooden box and can be purchased at a price of 1 800 Rubles at the Institut gigeny truda i profbolezney Ministerst-

Soviet analyzers of

va zdravookhraneniya RSFSR - Institute for Work and Occupational-Disease Hygiene of the USSR Health Ministry in Gorkiy no 20 Semashko Street. The workshops of the Physical Technical Institute in Leningrad produce on order an ultra-violet analyzer, which operates on the principle of photoelectric measuring of ultra-violet light (2 537 Angstrom) absorption in Hg vapor and accomplishes one analysis within 1/2 - 1 minute. The instrument employs semiconductor diodes and triodes. Its scale is calibrated in 0 - 12 mercury standards. One "mercury standard", (according to GOST 5602-70) is the maximum permissible content of Hg vapor in the air, which is 0.2 mg m⁻³ or 0.1 mg/liter. The instrument has an accuracy of ± 5% at full deflection. It is fed from a built-in "ZMT-7" 6 v battery and weighs 1.5 kg. There is a figure.

The apples were found to be incompletely soluble. Fig. 4 compares the... and the peroxide concentration during... oxidation. The content of insoluble components depends on time and temperature of ozonization. Ozone acts as an initiator. The increased reaction rate as compared with those of air or oxygen at low temperatures increases the difference between oxidation- and diffusion rate of the film. Surface and thickness considerably affect the rate of peroxide accumulation. As it is approximately proportional to the square of the increase of the portions

Card 2/2

B110/B205

Ozonization of atactic polypropylene

insoluble after ozonization, the latter represent the oxidation initiator. Their oxidation rate is higher from the beginning of the reaction. They are probably formed by cross linking of polymer chains by peroxide groups, hydrogen peroxides and polymeric peroxides which are formed particularly on the film surface. At a certain temperature a maximum concentration of peroxide oxygen cannot be exceeded at arbitrary oxidation time. (Fig.3). Contrary to atmospheric oxidation, it does not decrease in the case of ozonization, the peroxide decomposition rate being equal to the formation rate. This maximum concentration approximately corresponds to the peroxide concentration in the insoluble part of the film. A dynamic equilibrium is assumed to be present in the system because of the destruction of the macromolecules. At a larger sample thickness the maximum peroxide concentration is attained more slowly. A 10% content of insoluble fractions corresponds to a surface layer of 0.25 mm for a 0.5 mm thick sample. As in this case the formation of insoluble fractions sets in at once at beginning ozonization, the maximum concentration in small samples is attained more rapidly. At higher oxidation temperatures (59°C, 76°C) the insoluble fractions decrease. Presumably hydrogenperoxides are formed at the expense

of the formation of unstable peroxides at equal total amount of peroxide oxygen, as the latter are exposed to a higher thermal stress. After 1000 hr at room temperature the hydrogenperoxide content decreases by 20 %, all peroxides, however, are already decomposed. There are 5 figures and 6 references, 2 Soviet-based and 4 non Soviet based. The reference to the English-language publication reads as follows: Ref. 10. Natta, J. Polymer Sci., 34, 696, 1959.

TITLE: Formation and decomposition of hydroperoxides of atactic polypropylene

PERIODICAL: Vysokomolekulyarnyye soyed neniya, v 3, no 7, 1961, 1104 - 1103

TEXT: Reference is made to the fact that grafting of side chains and thus modification of polymers is possible by formation of macroradicals. Such macroradicals may be formed by decomposition of peroxides formed in the oxidation of polymers. The target of the present paper was therefore to study the conditions of the formation and decomposition of peroxides on the example of atactic polypropylene. Polypropylene was purified by repeated precipitation from an alcohol and heptane solution by methanol and heating to 160°C in a nitrogen atmosphere. From a 1% solution of polypropylene in heptane, films 0.1 mm thick were produced on glass plates and oxidized by heating in air at 90-120°C. Determination of peroxides took place in nitrogen atmosphere. To the polymer dissolved in chloroform a saturated acetic acid KI solution was added.

Card 1/5

Formation and decomposition of. 25%

S/190/61/003/007/018/021

and the iodine released titrated with hyposulfite. The change in molecular weight caused by oxidation was determined viscosimetrically in a decalin solution. Decomposition of peroxides took place at 90 - 120°C in nitrogen atmosphere in sealed ampuls. A study of the oxidation showed that the same was depending on the diffusion of oxygen in the film, herewith on the thickness of the film. At rising temperature oxidation was faster than the rate of diffusion of O₂ in the film. Optimum film thickness

was found to be 0.1 mm. Fig. 2 shows the kinetic course of oxidation as a function of reaction time. For the initial phase of the reaction the equation: $d[ROOH]/dt = k[ROOH]$ (1) is put down, where k is the auto-catalytic factor, $[ROOH]$ is the concentration of peroxides determined experimentally after termination of time t . In the subsequent phases of oxidation k is not constant any longer. The empirical equation: $[ROOH]_t = \frac{1}{\lambda/(1-\lambda)} [\exp(-\lambda t) - \exp(-\mu t)] + [ROOH]_{init} \exp(-\mu t)$ (5) is quoted.

λ, μ, λ are constants. For 100°C, and assuming $\lambda = 0.078, \mu = 0.11, \lambda = 0.038, [ROOH]_{init} = 0.385$, the curve was calculated and drawn into Fig 2 as a dash line. From the linear dependences $\log \lambda = f(1/T); \log \mu = f(1/T)$.

Card 2/5

Formation and decomposition of... 2527.

S/190/61/003/007/018/021
B101/B230

where w is the rate of oxidation, the activation energy of the accumulation of peroxides in the polymer was calculated to be 24 - 25 kcal per mole. The induction period observed may be reduced or entirely eliminated by previous accumulation of peroxides, e. g., by treating the polymer with ozone. It was found that the intrinsic viscosity (and therefore also the molecular weight) decreases with increasing concentration of peroxides, regardless to temperature, following the same rules. Decomposition of the peroxides in inert atmosphere takes place as a reaction of second order (Fig. 5). Dependence $1/\text{ROOH} = f(T)$ is a linear function. Activation energy calculated from the constant of destruction rate amounts to 27 kcal per mole. The same value results from the function $\log 1/t_{\text{max}} = f(1/T)$, where t_{max} is the time in which maximum concentration of peroxides is attained. V. B. Miller and M. B. Neyman are mentioned. There are 7 figures and 5 references: 2 Soviet-bloc and 3 non-Soviet-bloc. The reference to English-language publication reads as follows: G. Natta, E. Beati, F. Severini, J. Title : Effects of Extracts and Hormones Derived from Posterior Hypophyseal Lobes upon Glycemia.

Orig Pub : Arhiv farmts., 1956, 6, No 1, 13-14

Abstract : Rabbits were hypodermically injected with one unit of oxytocin per each kg of their live weight. After 30-40 minutes symptoms of hypoglycemia were observed, which increased gradually and then subsided after 3 hours to initial level. Pregnant women suffering from diabetes should be given injections of pure oxytocin in preference to pituitrin, which may cause an even greater increase of glycemia. -- Y.A. Dushkin.

1. The first part of the document discusses the importance of maintaining accurate records of all activities. It emphasizes that this is essential for ensuring the integrity and reliability of the information collected. The text also mentions the need for regular audits and reviews to identify any discrepancies or errors.

2. The second part of the document focuses on the methods used to collect and analyze data. It describes various techniques and procedures that have been developed over time to improve the efficiency and accuracy of the process. The text also discusses the challenges associated with data collection and analysis, such as the need for specialized equipment and personnel.

3. The third part of the document discusses the importance of maintaining the confidentiality of the information collected. It emphasizes that this is essential for ensuring the security and integrity of the information. The text also mentions the need for strict security protocols and procedures to protect the information from unauthorized access or disclosure.

Bucharest, Revista de Zootehnie si Medicina Veterinara, Vol 16, No 12, Dec 66, pp 16-22.

Abstract [Author's English summary modified]: The author used paper electrophoresis to study blood serum protein levels in newborn to 90-day old cattle, and reports the dynamics of the various fractions in terms of age. The time when the calf organism starts its own immunoglobulin synthesis is determined and shown to be hereditarily determined. The possibility of a transient physiological hypogammaglobulinemia is suggested as a partial explanation for the greater sensitivity to infectious diseases of calves at certain ages.

Includes one table, one figure and 15 references, of which 10 Russian, one German and 4 English-language.

Orig Pub : Studii si cercetari stiint. Acad. RFR., Baza Timisoara,
Ser. stiinte med., 1956, 3, No 1-2, 49-53.

Abstract : The authors studied the effect of morphine upon the glyco-
genesis of liver in chick embryos, introducing morphine
every day in a dose of 0.05 ml, starting from the fourth
to the fifteenth day of the incubation, or just once during
the same period in a dose of 0.1 ml. A histo-chemical de-
termination of glycogen in the liver of the experimental
and control embryos showed that the morphine does not ef-
fect the liver glycogenesis in the first period of

on Carbohydrate Metabolism During the Embryonic
Period of Ontogenesis

Orig Pub : Ser. stiinte med., 1956, 3, No 3-4, 63-72

abstract : In an experiment with chicken embryos in 4 to 5
day incubation periods after the administration
into the chorioallantois of morphin (I), adrenalin
(II) and Na Luminal III the content of glycerin
was determined. Administration of I showed in
the first half of embryonic development a weak
and in the second half a strong anabolising ef-
fect. Administration of II and III during ear-
lier periods of ontogenesis produced catabol-
ising effect (provoking complete glycogenolysis)

Dist :
 Title : On the Problem of the Varieties of Winter Wheat
 and of Winter and Spring Barley and Their
 Districts.

Orig. Pub. in Dist. material, 1957, No. 5, 213-219.

Abstract: Results of a comparative study at experimental
 stations of the Scientific-Research Academy Insti-
 tute of varieties divided into districts and three
 newly obtained for 1949-1952. In regard to winter

Card : 1/3

5

wheat, good results were shown of the variety
 divided into districts "Chenad" 117 and the new
 varieties "Tyren Pramo" 16, divided into
 the steppe and forest-steppe regions of Moldavia,
 and "Bargan" 71. In the forest zones of bet-
 slopes of the Carpathian and Western Mountains
 (Muntaly Apuseni) the variety "Chenad" 117 pre-
 vailed. In the steppe and forest-steppe regions
 of the western part of Romania, most and the
 central part of Transylvania - "Ondok" No. 41-
 vides, into districts in Bessarabia. As regards a
 barley variety, "Chenad" 395 is the most early
 maturing and frost resistant, is divided into all
 zones of cultivation of winter barley. As regards

Card : 2/3

spring barley, the best variety - "Tyren Pramo"
 260, is divided into districts in the steppe and
 forest-steppe regions of Moldavia, Bessarabia, and
 Muntaly and Oltenia, and "Ondok" No. 41-
 vides is divided into districts in all regions of Tran-
 sylvania and Bessarabia in the forest zone of
 slopes and mountains, the best variety -
 "Tyren Pramo" 3 is divided into districts in
 the steppe and forest-steppe regions of Moldavia,
 Bessarabia, Muntaly and Oltenia, and DAB
 378 which is divided into districts in the
 central part of Transylvania. -- A. P. Delysteva.

Bucharest, Revista de Zootehnie si Medicina Veterinara, Vol 13, No 6, Jun 63, pp 60-66.

Abstract [Authors' English summary modified]: Reports on 2 pig fetuses resulting from an extra-uterine gestation that were 2 to 4 months above the usual gestation period. Radiological investigation showed numerous malformations of the members. Also reports an analysis of 3 cases of over-gestation in cattle, with a 3-1/2 month age difference of the fetuses, and a case of Acardius amorphous twins of Holstein-Friese calves. Remains of the sacrum, the lumbar vertebrae and a rib fragment were identified radiologically. The monster's body consisted of adipose, fibrous and striated muscular tissue. Contains 1 plate, 2 figures and 3 references - which 2 French, 2 German and 1 Russian.

Bucharest, Revista de Zootehnie si Medicina Veterinara, Vol 16, No 8, Aug 66, pp 42-48.

Abstract [Authors' English summary modified]: A study of two outbreaks of Aujeszky's disease in young and suckling pigs. The atypical nature of the symptoms is described; the anatomic-pathologic changes were characterized by inconsistent hemorrhagic diathasis. Economic losses as a result of a failure to reach a correct diagnosis promptly are pointed out, on the basis of one of the two described outbreaks in which hog cholera was also found.

Includes 6 figures and 5 references, of which 3 Rumanian and 2 French.
