TITLE: On the reaction of chromates with diphenylcarbazide

PERIODICAL: Nukleonika, v. 5, no. 11, 1960, 790

TEXT: (Abstract - Report No. 153/VII (IBJ - Institute of Nuclear Research, PAS)): Reactions of Cr(VI) with diphenylcarbazide (DPCD) and Cr (II) with diphenylcarbazone (DPCN) have been investigated spectrophotometrically and by potentiometric titration. The investigation concerned the reaction mechanism ~~in~~ the presence of excess reagents, conditions of extraction of the colored product, and the behavior of DPCN in solutions of organic and mineral acids. A mechanism is proposed for the reactions. [Abstractor's note: Complete translation]. ✓

TITLE: The spectral determination of trace quantities of rare earth elements by a fractional distillation method

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 24, 1962, 232, abstract 24D101 (Chem. analit. (Polska), v. 6, no. 6, 1961, 959-967 [Pol.; summary in Eng.]) ✓

TEXT: A method of spectral determination of Eu, La, Y, Nd, Pr, Sm in 5 N HCl solutions is described. The solution to be analyzed, with a volume 2 ml + 1 ml $Zr(NO_3)_4$ solution containing 10 μ /ml Zr, is evaporated at 200° with 1 g powdered graphite. 2% CsF as carrier is then added to the powder and the mixture is ground in an agate mortar for 20 min. A sample (40 mg) is placed in the channel of a graphite electrode 8 mm deep and 3.2 mm in diam. The upper electrode terminates in a cone (20°). The spectra are excited in a d-c arc (6 a) with anode operation. The electrode spacing is 5 mm. The spectra are photographed for 15 sec with a mixture of 80% Card 1/2

TITLE: Analysis of reactor fuel and reactor materials in the Department of Analytical Chemistry of the Institute of Nuclear Research of the Polish Academy of Sciences

PERIODICAL: Atomnaya energiya, v. 11, no. 1, 1961, 46 -55

TEXT: This paper presents a report on several analytical studies of nuclear fuels and reactor materials carried out during the last five years in the Department of Analytical Chemistry of the Nuclear Research Institute. The following is discussed in detail: Methods of uranium determination specially suitable for quantitative determination of small quantities. Spectroscopic methods; Investigations of Z. Radwan and B. Strzyżewska (Chem. Anal., 3, 737 (1958)), J. Czakov (Chem. Anal. 5, 35 and 863 (1960)), C. Feldmann and J. Ellenburg (Analyt. Chem. 27, 1714 (1955)), V. V. Nedler ("Zavodsk. laboratoriya" 21, 1056 (1955)), A. K. Rusanov and T. I. Tarasova ("Zh. anal. khim.", 10, 267 (1955)), etc. are discussed. In working with d.c. arcs and using molybdenum as inner

Analysis of reactor fuel ...

standard in an atmosphere of oxygen with argon, accuracies of $\pm 2.8\%$ were obtained in the uranium determination when the uranium content was 10^{-3} - $10^{-1}\%$. A disadvantage of the method is the necessity to use different standards for all kinds of ores and different standards even for those different extracting agents. Spectrophotometric methods: Investigations of L. Wódkiewicz (Chem. Anal. 3, 789 (1958)) as well as of J. Malinowski (Otchet IYaI, Z VIII/III-2-8 (1959), A. Fołdzińska (Otchet IYaI. Z. VIII/II-2-1 (1957), J. Malinowski (Otchet IYaI, Ch VIII/I-4b (1958), etc. The different methods are compared with one another. Reference is made to the good results obtained when tributyl phosphate and diethyl-dithiocarbonate were used for the extraction and cellulose column is employed; the express thiocyanate method is suitable only for rough estimates. The reliability of the usual carbonate method depends very much on the experimental conditions. The fluorometric method (L. Wódkiewicz. Chem Anal., 5, 985 (1960)) is very sensitive (good results for uranium concentration of $10^{-8}\%$), but the accuracy depends on the purity of the reagents. Electrochemical methods: Investigations of A. Sobkowska (Otchet IYaI VNA/II-3-1 (1956) and Z. VIII/I-4c (1958)), W. Czarnecka, A. Węglarczyk (Otchet Card 2/3

TITLE: Spectroscopic determination of gallium and indium after extraction

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 3, 1962, 146, abstract 3D67 (Acta chim. Acad. scient. hung., v. 28, nos. 1-3, 1961, 91-102)

TEXT: A method has been developed for the chemical-spectroscopic determination of Ga and In in ores and minerals. Depending on the type of ore, specimens are dissolved in different acids and transferred into a 0.06 N solution of HCl. From this solution they are extracted by means of iron α -nitroso- β -naphthol, the Fe 4032.63 Å line of which is superimposed on the Ga 4032.98 Å analysis line. The remaining solution is evaporated off, and the residue dissolved in a small amount of H₂O, and the In and Ga extracted from it by means of 10 ml of 0.1 M solution of 8-oxyquinoline in chloroform. The extract obtained is analyzed spectroscopically. For this purpose, it is added drop by drop to 75 mg of graphite powder (grain size Card 1/2

Spectroscopic determination ...

S/081/62/000/003/032/090
B156/B102

0.06 mm) containing $10^{-4}\%$ Co as internal standard. To the powder are added 20 mg of RbCl, which weakens the CN bands in the spectra, and 5 mg of NH_4NO_3 , which makes the powder more free-flowing. The spectra are excited by a combination of a 6 a d-c arc discharge and a spark discharge (inductance 0, capacitance 12 pF) from a Feissner generator. The upper screen-like electrode, and the lower flat-ended electrode, are made of copper. The analysis gap is 5 mm. Exposure time is 25 sec. An O-24 (O-24) spectrograph, with 3-lens illumination of a 4μ wide slot, is used. Calibration graphs are plotted using artificial standards for 0.5-10 γ for Ga and In per ml of extract. The analysis line pairs are Ga 4032.98 - Co 3952.3 \AA and In 4101.77 - Co 3952.3 \AA . Sensitivity of determination is $\sim 0.3 \gamma/\text{ml}$. With spectra photographed three times, the error characterizing the reproducibility of the determination results is 6%. With Al, Tl, Ni, Cu, Mo, Sn, and Bi present in proportions of 1 : 1 - 1 : 10, the intensity of the Ga and In decreases (except for Sn and Bi at proportions of 1 : 1). SOURCE: Nukleonika, v. 10, no. 5, 1965, 311-320

TOPIC TAGS: solution property, ion, uranium, chemical reaction kinetics, organic solvent

ABSTRACT: The kinetics of the disproportionation of U(V) ions in presence of organic acids was investigated. It was established that the rate of this reaction depends on the nature of the organic acid, its concentration, and the concentration of hydrogen ions. The results were confirmed qualitatively by polarographic measurements. Orig. art. has: 4 figures, 6 formulas, 4 tables. [NA]

TITLE: Colorimetric determination of uranium with the aid of 6(2-thiazolyalazo)-3-dimethylaminophenol (Tam)

SOURCE: Nukleonika, v. 11, no. 6, 1966, 399-405

TOPIC TAGS: uranium compound, colorimetry

ABSTRACT: A method for determination of uranium was devised. The pH range within which the color complex is formed was determined, a suitable extractant was chosen, and the effect of diverse ions was examined. The determination of uranium in samples was preceded by extraction with 20% tributyl phosphate in $CHCl_3$ from 7N HNO_3 . The color reaction was developed by shaking extracts with an aqueous solution of TAM at pH 7. The effect of diverse ions was eliminated by using ethylenedinitrilotetraacetic acid (EDTA) as masking agent. The excess of EDTA was combined with the aid of calcium ions. Orig. art. has: 5 figures and 2 tables.

Abstract : The relationship between conditioned stimuli was studied in 10 healthy subjects before and following the drinking of 50 g of 40% alcohol. Prior to this a conditioned motor reflex was developed to a cutaneous kinesthetic stimulation caused by placing a sphere with a 67 mm diameter in the subject's palm and its differentiation from a sphere with a 40
