Title : Some Researches on Nature of Biological Effect of Neutrons on Plants.

Orig Pub : Izv. Timiryazevsk. s.-kh. akad., 1957, No. 3, 33 - 52

Abstract : The irradiation of pea seeds having a high B content with a neutron stream showed the largest tissue dosage introduced by Li^7 nuclei emissions. An approximation of the relative biological effect of various nuclear reactions caused by neutrons in plant tissues has been made. P^{32} plays a major role in induced activity and may hence serve as an indicator of the movement and exchanges of P in germinating seeds. The fraction of nucleoproteids has the greatest specific activity. The inhibition of plant growth and

TITLE: A marine jib crane. Class 65, No. 181508

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 9, 1966, 147

TOPIC TAGS: crane, marine equipment

ABSTRACT: This Author's Certificate introduces a marine jib crane with a hoisting winch and a single-cable load hanger with two directing cables to keep the load from swinging. Design is simplified and operation of the crane is improved by fixing a cross member on the crane arm perpendicular to its axis. Blocks are mounted at the ends of this cross member. The winch is made with three adjacent drums on a single shaft. The load cable passes over the center drum while the directing cables run through the corresponding blocks on the crosspiece and pass over the respective side drums of the hoisting winch.

TITLE: Acceleration of film formation by oils and alkyds

SOURCE: Lakokrashchivnye materialy i ikh primeneniye, no. 1, 1966, 13-15

TOPIC TAGS: drying oil, alkyd resin, hydroperoxide, dimethylaniline, peroxide

ABSTRACT: The possibility of accelerating film formation by oils and alkyds which do not contain conjugated double bonds was studied by using redox systems consisting of hydroperoxides and salts of a metal of variable valence, and also promoter additives to redox systems formed during the oxidation of these film-forming substances in the presence of siccatives. In the study of the oils (linseed, sunflower and cottonseed oil) the effect of redox systems and promoters on the drying time of triglycerides with various degrees of saturation and no conjugated double bonds was determined. The redox systems were: (1) cobalt naphthenate (CN); (2) CN and dimethylaniline (DMA); (3) CN and dicyclohexyl peroxide 1,1'-bis-hydroperoxide (HPC) and (4) HPC+CN+DMA. Of the promoters studied (benzoin, triethanolamine and DMA), DMA was found to be the most effective in both oils and alkyds. It is shown that the use of redox system (3) and DMA accelerates the drying of semidrying and drying oils, alkyds modified with these

 TITLE: Study of polyester methods

TITLE: Study of polyester acrylate film formation by spectral and chemical methods
SOURCE: Lakokrasochnyye materialy i tekhnika
TOPIC: ...

SOURCE: Lakokrasochnyye materialy i ikh primeneniye, no. 4, 1965, 8-12

ABSTRACT: The object of the study was to compare the chemical structure of the original oligomers and of the polyester acrylate (PEA) films obtained from them, and to obtain direct experimental evidence for oxidative transformation of PEA in the course of film formation. The following PEA were employed: trimethylolpropane (TMA), hexamethacrylate (bis-ethylene glycol) adipate (HEA), and dimethyl acrylate (bis-ethylene glycol) adipate (DMA). An interpretation of the IR absorption spectra of oligomeric PEA and films obtained from them in a vacuum and in air is given; the volatile products evolved during the formation of HEA films were also analyzed. It is shown that the formation of PEA films in air is associated with oxidation of PEA;

TEXT: In addition to the hexamethacrylate - (bis-pentaerythrol)-adipate (MPA) and hexaacrylate - (bis-pentaerythrol)-adipate, previously obtained (see RZhKhim, 1962, 12P206), the two following new polyesteracrylates (PEA) have been synthesized: tetramethacrylate- (bistrimethylolethane)-adipate (MTA) and dimethacrylate-(bis-ethyleneglycol)-adipate (MEA). It has been established that the film-forming property is determined by the molecular functionality, the viscosity and the ramification of oligomer PEA as well as by the conditions of reaction. The PEA investigated as regards their film-forming properties can be classified as follows: MPA>MTA>MEA. It has been shown that the hardness and the elasticity of films is conditioned by

Card 1/2

second place in the given order. IV is found to be much more efficient than III. This is explained by the fact that IV contains residues of the fatty acids of linseed oil which may form unstable hydroperoxides and additional free radicals with atmospheric oxygen. Thus, the same efficiency was obtained for both systems: PB-IV and PB-III with linseed oil additions [Abstracter's note: Complete translation.]

TITLE: Fourth scientific and technical conference on "Cybernetics for the improvement of measurement and inspection methods"

SOURCE: Izmeritel'naya tekhnika, no. 9, 1964, 58-59

TOPIC TAGS: cybernetics, electric measurement, electric quantity instrument, digital computer, electronic equipment, electric engineering conference

ABSTRACT: The conference was held 1-4 July at the All-Union Scientific Research Institute of Metrology by the Section of Electrical Measurements of the Council on the Problem of "Scientific Instrument Making" of the State Committee on Coordination of Scientific Research Work in the USSR together with the All-Union Scientific Research Institute of Electrical Measurement Instruments and the Leningrad Regional Administration of the Scientific and Technical Division of the Instrument Making Industry. More than 400 delegates from 20 cities of the country participated. Fifty-seven reports were heard and discussed. Reports were given by: P. Y. NOVIKOV (Leningrad)--"Definition of the Concept of Informational Error in Measurement and its Importance in Practical Use" and "On the Problem of the Average Informational Criterion of Accuracy Throughout the Entire Scale of an Instrument"; Ya. A. Card 1/4

Sanitary Characteristics of New Homes in Villages
of Belorussian SSR," Prof Z. K. Mogilevchik, Docent
M. A. Gabrilovich, Chair of Hygiene, Minsk Med
Inst, 32 pp

"Gig i San" No 5

New homes in Belorussian SSR are larger and have more
space per capita, but shortcomings are not enough
window space and insufficient natural light, etc.
This is due to the failure of public health organi-
sations to participate in the design and construction.
Suggests that this be corrected.

Title : Application of Cortisone in Some Eye Diseases.

Orig Pub : Zdravokhr. Belorussii, 1957, No 2, 39-42.

Abstract : Cortisone (1) in a dose of 0.2-0.3 ml (concentration and the solvent are not indicated) was administered under the mucous membrane of the eye ball every 2 days (course of treatment 2-10 administrations) to 52 patients. Positive results were obtained in not neglected cases of sympathetic ophthalmia, in all cases of herpetic keratitis; 1 is particularly effective in rheumatic iridocyclitis.

The authors investigated the possibility of reducing the time required for the formation of polyester acrylates in order to improve the conditions of preparation of polymers and their applications. It was assumed that film formation of polymers (vinylacrylate (VAc), methyl methacrylate (MMA) and tetramethacrylate (TMA) could be accelerated by introducing cocatalysts, changing the oxidation-reduction systems employed, or adding a high-molecular substance to the polyester acrylates to raise their viscosity. It was

Periodical: Zh. obshch. khimii, 1956, 26, No 2, 312-322

Abstract: I. Determined were the pH of solutions of perchlorates of Be, Mg, Ca, Sr, Ba, Zn, Cd and Hg in the concentration interval from 0 to 0.1 M. The acidity of the solutions in all instances increases with increasing concentration. pH of equimolar solutions of the perchlorate of investigated cations changes synbatically with the ionization potential I, and for pH as well as there is observed the phenomenon of secondary periodicity; which indicates that
