"Relation of the Blood Indicators to the Characteristic Build of Horses"
Tr. Sev. -Oset. S. -Kh. In-ta, No 16, 1953, 219-224

Author investigated the blood indicators of horses of heavy and light build. In all indicators, such as the number of erythrocytes, this number was significantly greater in the heavy-set horses. Author concludes that the oxidizing processes are more energetic. (RShBiol, No 9, May 1955)

Title : Sexual Dimorphism of the Blood Indicators in Horses.

Orig Pub: Tr. Severo-Osetinsk. s.-kh. in-ta, 1956, 17, 213-219.

Abstract: In 2 months old pure-bred riding horses, the Hb count was 9.5 percent, the erythrocyte (E) count 5.7 percent higher for mares (M) than for colts (C). Similarly, the Hb count for 6 months old M was 12.4 percent, the E count 5.3 percent higher than for 6 months old C. From the ages of $1\frac{1}{2}$ to $2\frac{1}{2}$ years, the changes of the Hb content are the same in colts and in mares. The amount of E is larger in $1\frac{1}{2}$ years

is reached), it is 28 percent higher in colts than in mares. Up to 6 months of age the leukocyte count per 1 mm³ is higher in C than in M, while from the age of 1½ years on to adulthood it is higher in M than in C. Within the age group from birth to 1½ years, the cellular coefficient is higher for M, while in older animals it is higher for C. The hemogram of colts shows a neutrophilic tendency, while the hemogram of mares possesses lymphocytic characteristics.

TITLE: Histological observations of gliomacrophages grown in vitro

SOURCE: Biologia, no. 11, 1965, 804-808
22

TOPIC TAGS: histology, enzyme, microbiology, cytoplasm, animal, nervous system

ABSTRACT: Gliomacrophages grown in vitro contain in their cyto-
plasm various amounts of neutral fats. In between the droplets
of fat the cytoplasm is strongly PAS-positive. Among the en-
zymes acid phosphatase, non-specific esterase, and succinate de-
hydrogenase were found. Alkaline phosphatase was not found. The
macrophages originated in the brain and spleen of chicken embryo
and no difference in their behavior due to the different origin
of the material was found. Increasing length of cultivation in-
creased the amount of fat and the activity of the enzymes. Orig. art. has:

MUNIN, A.G.

46-3-13/15

AUTHORS: Munin, A.G., Yudin, Ye. Ya.

TITLE: On the Formation of Noise in an Air Duct with Hollows (K voprosu o shumoorazovani v vozdukhovode s uglubleniyami)

PERIODICAL: Akusticheskiy Zhurnal, 1957, Vol.III, Nr 3, pp.291-292 (USSR)

ABSTRACT: The object of the present work was an experimental study of the noise produced in a channel which has recesses in its walls. This case appears to be intermediate between a free flow in an infinite atmosphere and a channel with rigid walls. The experimental set up is shown in Fig.1. The air flow was produced by an apparatus described previously in (Ref.2). The size of the recesses could be varied and the mean speed of the current was 10-35 m/sec. In Fig.2 the dependence of noise on the speed of the current in the channel having a height of 100 mm and recesses 300 mm deep x 100 mm wide is given. When the recesses are excluded (channel with smooth walls) the variation of the level of sonic pressure is proportional to the 6th power of the speed of flow. This picture, however, is radically changed in

Candidate of Technical Sciences; Ed. of Publishing House: T. A.
Valedinskaya; Tech. Ed.: N. A. Pashlikova; Managing Ed.: A. S.
Zaymovskaya, Engineer.

PURPOSE: This collection of articles is intended for engineers, technicians,
and scientific workers specializing in industrial aerodynamics and
noise suppression of aerodynamic installations.

COVERAGE: The collection contains papers on problems associated with noise
suppression of aerodynamic installations. The subjects covered include:
the basic parameters of noise suppressors, jet noise, the aerodynamic
noise of rotating rods, noise suppressors for large ventilating systems,
and methods used in acoustical research. No personalities are mentioned.
All articles but one are accompanied by references most of which are
Soviet.

TITLE: Study of the acoustic characteristics of a free turbulent jet

SOURCE: Akusticheskiy zhurnal, v. 10, no. 3, 1964, 271-275

TOPIC TAGS: acoustics, aerodynamic sound generation, jet noise, turbulent airflow, turbulent boundary layer, supersonic pressure drop

ABSTRACT: The results of an experimental study of jet aircraft noise are presented. The increased knowledge of space-time correlations in turbulent flow was applied to throw new light on the noise radiated by jets, its acoustic characteristics, and the noise spectrum near the boundary of the jet. The basic mechanisms of aerodynamic sound generation are briefly discussed. Orig. art. has: 7 figures and 5 formulas.

TITLE: The magnitude of the reduction of jet noise level in a cylindrical muffler

SOURCE: Akusticheskiy zhurnal, v. 12, no. 1, 1966, 72-77

TOPIC TAGS: gas jet, jet flow, acoustic noise

ABSTRACT: The problem of the optimal factor of jet noise reduction in a muffler was first investigated elsewhere (J. Dyer, P. Franken, P. Westervelt. Jet noise reduction by induced flow. J. Acoust. Soc. America, 1958, 30, 8, 761-764; A. Powell. Consideration concerning an upper limit to jet noise reduction. J. Acoust. Soc. America, 1959 31, 8, 1138-1140). The authors of the earlier work determined the optimal quantity of jet noise reduction for the case of the application of corrugated and multi-tube nozzles, however, they obtained no standard working formulas. The present authors attempt to determine this quantity theoretically, as well as to determine jet noise reduction by decreasing the velocity gradient. Investigations were performed to determine the optimal

Card 1/2

UDC: 534.83

L 33355-66

ACC NR: AP6007997

0

magnitudes for the reduction of jet noise in a muffler. The optimal condition consists in the following: the noise generated during the flow of gases out of the outflow section of the muffler should not exceed the noise level of the primary jet, attenuated as a result of damping in the muffler. The author also studies the question of the reduction of jet noise in the muffler ejector. In both cases standard working formulas are obtained for the determination of the magnitudes of jet noise reduction. A comparison of theoretical data with the experimental shows satisfactory agreement. Orig. art. has: 8 formulas and 4 figures.

TITLE: A Transistorized Amplifier (Usilitel' na poluprovodnikovykh triodakh)

PERIODICAL: Radio, 1957, Nr 5, pp 53-55 (USSR)

ABSTRACT: A do-it-yourself type transistorized amplifier for an electromagnetic or a piezoelectric phonograph pickup is described. In case of an electromagnetic pickup the preamp stage uses one type P1A transistor and a matching transformer. In case of a piezoelectric pickup two type P1E transistors are used. In both cases the final push-pull stage is designed with type P3W transistors and operates in the AB class. The amplifier output is about 1½ w with 0.35 mw input at 1000 cps; distortion 3% and goes up to 6% at 100 cps. Frequency response characteristic rises by 7-10 db at 100-200 cps as compared to the 1,000-cps point. Due to high prices on transistors in the USSR it is recommended to use the circuit with one type P1A transistor for the time being. Two circuit diagrams, parts data, instructions for winding transformers, also for mounting, assembling and alignment, and test findings are supplied. There are 5 figures and 2 tables (with transformer data).

TITLE: /Phonographs (Radiogrammofony) - "Yubileynyy" (RG-3)

PERIODICAL: Radio, 1959, Nr 2, pp 19-20 (USSR)

ABSTRACT: The /phonograph "Yubileynyy" (RG-3), measuring 160x260x375 mm, consists of the following basic parts: the three stage amplifier of the type NCh; an electric motor of the type EDG-1 (2,800 rpm) with a driving gear for rotating the turntable; a piezo-ceramic pickup with universal head and automatic stop; and a loudspeaker of the type l-GD-9 installed inside the lid of the case; the case lid with the loudspeaker can be removed. A frequency-selective feedback inside the amplifier covering all 3 stages, is used for the elimination of sound distortions. The total weight of the phonograph - 5.7 kg. There are 2 drawings and 1 circuit diagram.

2025 RELEASE UNDER E.O. 14176

VERSION NR: AP5003958

AUTHOR: Munits, I. N.; Shtern, V. I.

TITLE: Enhancing the reliability of an EMU-8 electronic simulator

SOURCE: Priborostroyeniye, no. 1, 1965, 26-27

TOPIC TAGS: electronic simulation / EMU-8 electronic simulator

ABSTRACT: As EMU-8 electronic simulators had developed serious shortcomings in actual operation, a few changes were introduced to enhance their reliability. The loss of adjustment of the contacts of RP-4 polarized relays caused self-excitation in operational amplifiers; new VU-6,3 vibrapacks yielding 100-cps modulation were installed to replace the relays, and the reference-voltage circuit was modified. Trouble in the electron-beam indicator was remedied by separating the heater circuits of some (6N8S and 6P7S) tubes associated with it. Undesirable circuits were formed when some units of the

35

L 31037-65

ACCESSION NR: AP5003058

simulator were switched off; this situation was corrected by introducing decoupling diodes. Three minor changes are also listed. Orig. art. has 2 figures.

TITLE: On the Prerequisites for Automation of Enterprise in the Aluminum Industry (O predposylkakh avtomatizatsii predpriyatiy alyuminiyevoy promyshlennosti)

PERIODICAL: Sb. materialov tekhn. inform. Gos. in-t po proyektir. alyumin., magniyevykh i elektrodn. z-dov, 1957, Nr 1, pp 36-38

ABSTRACT: An examination is made of the major conditions for automation of processes in the aluminum industry, namely, continuity of the process, operational reliability and controllability of the equipment, and good dynamic process characteristics. Examples are presented of the models and dimensions of plant and equipment specified in plans and yet unsuited to the requirements of automation. The problem of the need to develop control attachments for unstable and readily crystallizing solutions and pulps of alumina production is examined, also the need for expanding investigations of the objects and methods of automation, as well as introduction of special means of automation

cordance with the reaction type of Moorwein-Ponndorf). 2,3-
-cyclohexanobicyclo-1,3,3/-nonanol-2-one-9 (IV), yield 1.4%,
molting point 171 to 172° (from benzene), is produced together
with cyclohexonylcyclohexanone (III) (yield 15 g) at a
12 hour boiling of 98 % of water; somicarbazone (SG), melting point
CH₃OH and 60 g of water; somicarbazone (SG), melting point of
IV was confirmed with countsyntheses. The structure of
201 to 202° (dissociates, from benzene). The structure of
buscyclohexanone (V) are left to age (24 hours at about 20°
and 24 hours at -10°) with a solution of 20 g of KOH in 200
mlit of CH₃OH; yield of IV 62%; b/ 60 g of I is boiled 3
hours with 17.5 g of N-N'-methylbispiperidino and the pro-
duced V is left to age with a solution of 5 g of KOH in 100
mlit of CH₃OH, yield of IV 8%. The condensation of I with
formalin in the presence of the methanol solution of KOH

does not result in IV, but results in a substance of the composition C₁₉H₂₈O₃, melting point 193° (from chloroform), the structure of which has not been established. Boiling of I with KOH aqueous-alcohol solution results in 2,3-cyclo-hexao-4-methylbicyclo-[1,3,3]-nonan-2-one-9 (VI), yield 24%, melting point 162° (from CH₃OH); II was separated in this case besides VI, yield 13%. VI was prepared also by the condensation of I with CH₃CHO: in the presence of KOH aqueous-alcohol solution or of KOH methanol solution (yields 24 and 9% correspondingly) and by boiling (12 hours) III with NaOH aqueous-alcohol solution, yield 4%. VI does not change when heated with (CH₃CO)₂O and CH₃COONa, but when heated with (CH₃CO)₂O in the presence of concentrated H₂SO₄ it dehydrates producing 2,3-cyclohexano-4-methylbicyclo-[1,3,3]-nonanone-9 (VII) (the position of

Title : Condensation Reactions of the Aldol Type. III. 2,6-Dicyclohexylidene-Cyclohexanone-1.

Oeig Pub : Chem. listy, 1957, 51, No 4, 771-773; Sb. chekhol. khim. rabot, 1957, 22, No 5, 1691-1694

Abstract : By means of infrared spectra and chemical conversions it is shown that the oily product (I) formed on self-condensation of cyclohexanone is not 2,6-dicyclohexylidene-cyclohexanone-1 (II), but 2,6-dicyclohexenyl-cyclohexanone-1 (III). On action of HCl (gas) on a solution of I in glacial CH₃COOH there is formed, with a yield of 65.8%, the 2,6-di-(1'-chlorocyclohexyl)-cyclohexanone-1 (IV), MP 127-127.5° (from alcohol), which is identical with IV obtained with a yield of 59.3% by addition of HCl to III.

o-Terphenyl. Jaromír Flešek and Petr Munk (Vysoká škola chemicko-technologická v Brně, 1954, 6(1), 11, 607) (1957); cf. J. A. 20, 1791. In benzene at 100°, *o*-terphenyl hexanone (II) and PhMgBr gave crystalline and liquid *1-phenyl-2-(1-cyclohexen-1-yl)cyclohexane* (III) and (IIa).

Dehydrogenation of II yielded *o-terpinyl* (III) and a small amt. of triphenylene (IV) whose formation is not explained, which, however, was not formed by further dehydrogenation of III. Adding 11.8 g. LiAlD₄ to 10.0 g. II in 10 ml. C₆H₆, refluxing the mixture 1 hr., cooling to -10°, and isolating the product by distillation gave 8.5 g. (60%) and fractions b₄ 160-80° which dissolved in petr. ether and cooled to -10° yielded 5.5 g. II, m.p. 58-4° (from petr. ether). Chromatography of mother liquors of II (21.0 g. over Al₂O₃ (activity II) gave by elution with petr. ether 19 g. of a liquid mixt. of isomers IIa, b, 148-52°, d₂ 1.035, n_D²⁰ 1.5512. Heating 6.4 g. II to 350-45° with 2 g. 5% Pd on Al₂O₃ (V) activated by shortly boiling with 5% aq. K₂CO₃, diluting the mixt. with 20-30 ml. petr. ether, filtering off the catalyst, and allowing the soin. to stand 3 hrs. at room
