ABSTRACT: Viktor Ivanovich Ivanov, Dr. of Tech. Sciences, professor of the Leningrad Electrotechnical Institute (ment. V. I. Ulyanov, died 24 August 1964). He was born in 1900, was the first teacher of special relay protection of power equipment in the USSR, outlining the principles of the new discipline in a monograph published in 1932. In recent years, Ivanov has concentrated in the development of the teaching of industrial electronics and pulse technology in the Leningrad Institute. [JPRS]

Automation of ship equipment (Avtomatizatsiya sudovykh ustavovok) 2d ed., rev. and enl. Leningrad, Izd-vo "Sudostroyeniye", 1965. 607 p. illus., biblio. 3500 copies printed. Textbook for institutions of higher technical education				
TOPIC TAGS: shipborne automatic control system, linear control system, nonlinear control system, electric motor				
PURPOSE AND COVERAGE: This book is based on the course "Electrical equipment and automation of ships" conducted at the Leningrad Electrotechnical Institute im. V. I. Ul'yanova. This textbook is intended for use in the above-mentioned course in schools of higher technical education; it may also be used by engineers designing new automated marine plants and by manufacturing workers. The book deals with elements and control systems of automated ship installations. The theoretical fundamentals of automatic control are also considered, along with linearized systems and problems of the theory of nonlinear systems. Fundamentals of the statistical dynamics method of systems with automatic control are discussed.

TITLE: Heat of formation of titanium nitrides as a function of their composition

SOURCE: Zhurnal fizicheskoy khimii, v. 40, no. 5, 1966, 1125-1128

TOPIC TAGS: titanium compound, heat of formation, nitrogen compound, calorimetry

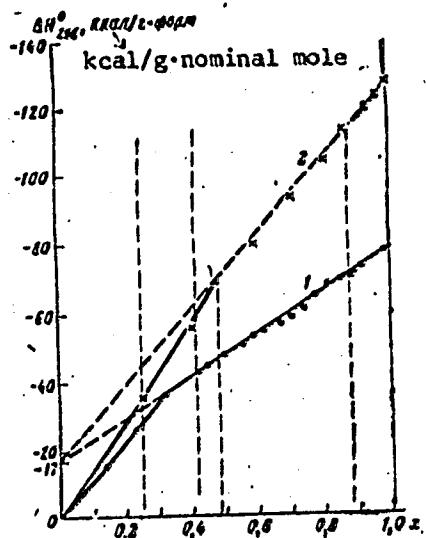

ABSTRACT: The dependence of the heat of formation of titanium nitrides upon composition was studied by calorimetric combustion technique. Homogeneous samples of titanium oxides ranging from $TiN_{0.14}$ to $TiN_{0.98}$ were prepared by calcining Ti metal in the presence of nitrogen at $1100^{\circ}C$. For nitride samples of a general formula TiN_xO_y ($y = 0.01-0.02$) suitable corrections were made in order to account for the oxygen content. The dependence of the heat of formation upon nitrogen content (x index in the formula) is shown in Fig. 1 where: 1 - is for titanium nitrides and 2 - is for lower oxides of titanium. It was found that within the range of

TITLE: The Neutron-Deficient Isotope Ho¹⁵⁵. Letter to the
Editor

PERIODICAL: Atomnaya energiya, 1960, Vol 8, Nr 3, p 248 (USSR)

ABSTRACT: Mihelich, Ward, and others (see ref) assumed the exis-
tence of a short-level isotope Ho¹⁵⁵ as
a parent nucleus needed to explain the formation of
isotopes of Dy¹⁵⁵ and Tb¹⁵⁵. The authors investigated
on a scintillation γ -spectrometer the γ -spectrum of
a holmium fraction obtained as a result of deep splitting
of tantalum during exposure to 660-mev protons of the
synchrocyclotron at the Joint Institute of Nuclear
Research (Ob'yedinennyj institut yadernyh issledovaniy).
They also performed multiple chromatographic separation
of the daughter element dysprosium. A triple separation

Card 1/3

The Neutron-Deficient Isotope Ho¹⁵⁵.
Letter to the Editor

78324
SOV/89-8-3-9/32

in 1-hr intervals showed in all three cases the presence of only Dy¹⁵⁵ isotope identified from its γ -spectrum and half-life. Mass number of Dy¹⁵⁵ was fixed by means of a mass spectrometer. The amount of Dy¹⁵⁵

in consecutive separation was proportional to the activity of the parent material (Ho¹⁵⁵) and varied according to a half-life of approximately 46 min. The authors, therefore, claim that they positively established the existence of the Ho¹⁵⁵ isotope with a half-life of 46 + 3 min. The γ -spectrum of this isotope probably contains the line \sim 140 kev. Mihelich and others earlier attributed the \sim 138 kev γ -line with a half-life of approximately 1 hr to Ho¹⁵⁶, although they noted that the mass determination was not sufficiently substantiated. There are 5 references, 2 Soviet, 1 U.K., 2 U.S. The U.K. and U.S. references are: J. Mihelich, B. Harmatz, T. Handley, Phys. Rev., 108, 989 (1957); T. Ward, K. Yacob, J. Mihelich, B. Harmatz, T. TITLE: The 75-minute Activity of Yb

PERIODICAL: Izvestiya Akademii nauk SSSR. Seriya fizicheskaya, 1960,
Vol. 24, No. 3, pp. 278-282

TEXT: The article under review was read at the Tenth All-Union Conference on Nuclear Spectroscopy (Moscow, January 19 - 27, 1960). The authors analyzed the spectra of electrons and positrons arising in the decay of the 75-minute Yb isotope by means of a magnetic β -spectrometer with a homogeneous magnetic field. The half-width of the Cs¹³⁷ K-line amounted to 0.8%. Electrons were recorded by an electron counter of the type MST-17. An analysis of the positron spectrum (Fig. 1) revealed that it corresponded to a half-life of 75±2 min as to intensity in all its parts. Fig. 3 shows one of the decay curves of the positron spectrum; its analysis by means of the Fermi method (Fig. 2) showed that in the range

✓ 3

Card 1/3

The 75-minute Activity of Yb

3003
S/048/60/024/03/04/019
B006/B014

of 1,300 - 2,940 kev there occurred no deviations from the shape which is characteristic of allowed β -transitions. The energy limit of the β -spectrum is found at 2,940±20 kev. A deviation of the spectrum from the Fermi shape was observed at energies below 1,300 kev. If this deviation is assumed to be related to a second component of the β -spectrum, its energy limit should then be at 1300±100 kev. L- and M-lines of the 91.5-kev transition and K- and L-lines of the 211-kev transition were found in the spectrum of conversion electrons. Data on conversion lines are compiled in Table 1. The mass number of this 75-min isotope has not yet been safely ascertained, but a number of authors believe it to be 167. The opinions of various authors are cited in this connection, among them B. S. Dzhelepov and L. K. Peker, A. V. Kalyamin and A. Abdurazakov. To conclude from the investigation results obtained by the authors of the present paper (Table 2) it does not seem possible to ascribe the mass numbers 167 and 165 to the 75-minute isotope. Results likewise exclude 163 and 161. The only possible numbers left are 162 and 164. Considerations indicate 164 as the most probable mass number. Fig. 4 shows the possible decay scheme. To check this assumption, the authors analyzed ✓

Card 2/3

B006/B014

the conversion electron spectrum with a view to determining the Z of that nucleus in which the 91.5-kev transition, excited in the decay of 75-min Yb, occurs. Respective data are given in Table 3. It was thus proven that the 75-min activity is actually to be ascribed to the mass number 164. There are 4 figures, 3 tables, and 12 references, 7 of which are Soviet.

TITLE:

Energy levels in the ^{166}Er nucleus

PERIODICAL: Acta Physica Polonica, v. 20, no. 3, 1961, 257-266

TEXT: In the present paper, some gamma-gamma coincidence experiments in the decay of ^{166}Yb are described, and a level scheme of ^{166}Er is proposed, which is more complete than that given by Gromov et al. [Ref. 7: Gromov, K. I., Dzhelepov, B. S., Pokrovskiy, V. N., Izv. Akad. Nauk SSSR, 23, 821 (1959)]. The isotopes of Yb were obtained by irradiation of Ta targets with 660-Mev protons from the synchrocyclotron of the Dubna Joint Institute of Nuclear Research (USSR). The measurements in Cracow were begun 1.5 to 3 days after the irradiations, which were performed in intervals of about two months. In the first two runs, the measurements of gamma radiation were made at different times for the decay analysis of the entire spectrum of the isotope mixture of ytterbium. From this analysis

Baranovskii, W. I., Pokrovskii, W. N., Izv. Akad. Nauk SSSR, 23, 819 (1959). Besides a confirmation of the results of [6] (see list of English references), the authors obtained the following coincidences: between the 710-kev line and the 460-, 710, 790-kev peaks; between the 790-kev line and the 185-, 460-, 710-kev peaks; between the 1180-kev line and the 880-kev peak; between the 1270-kev line and the 185- and 600-kev peaks, and between the 2070-kev line and the 80- and 185-kev photopeaks. On the basis of these experiments and the energy values of transitions given by Gromov et al., the authors suggest a new level scheme for ^{166}Er from the decay of ^{166}Tm (Fig. 6). The branching ratios of transitions between the levels with K=2 and K=0 are calculated on the strength of Alaga's theory. For the level scheme proposed by the authors, they are in better agreement with the experimental values than for the scheme given in [6]. The present proposal of the level scheme for ^{166}Er needs some more confirmation. To get this, the authors are starting now gamma-gamma directional correlation experiments in order to obtain definite values of spins for the 788-, 862-, 957-, and 2140-kev levels. The authors thank S. Chojnacki and I. A. Yutlandov for the preparation of sources, and K. Malinowski and

SOURCE: Mikrobiologichnyy zhurnal, v. 28, no. 5, 1966, 48-54

TOPIC TAGS: virus, virus disease, rabies virus, deoxyribonuclease

ABSTRACT: The effect of deoxyribonuclease on fixed rabies virus was studied. A mixture of the enzyme with the virus was injected into the brain of albino mice weighing 8 to 10 g. Deoxyribonuclease greatly reduces the infectious titre of the virus, its inactivating effect being directly proportional to its concentration. Intracerebral administration of DNase solutions to mice somewhat reduces the percentage of lethality. Orig. art. has 4 tables. [Based on authors' abstract] [KS]

TITLE: Capacity of L₂ Herpes viruses for forming deficient colonies on chick embryo fibroblast monolayers

SOURCE: "Voprosy virusologii, no. 3, 1966, 374

TOPIC TAGS: virology, Herpes virus, tissue culture, HISTOLOGY

ABSTRACT:

Optimum conditions for growing negative L₂ virus cultures in tissue culture were developed. The best results were obtained with the Porterfield and Allison method of culturing with bicarbonate buffer for three or four days after adding virus. The deficient colonies appear in 4-5 days and are discs 0.5-2 mm in diameter. [W.A. 50; CBE No. 10]
