AUTHOR: Novoselov, A. S.; Sokolov, S. A.

TITLE: Voltages arising during lightning strokes in symmetrical cables at  
repeater stations

2/  
B

SOURCE: Elektrosvyaz', no. 7, 1965, 63-70

TOPIC TAGS: repeater station, surge voltage

ABSTRACT: The surge-voltage height and duration in an underground metal-sheath cable depends on the distance to the point of lightning discharge, lightning-current height and shape, earth resistivity, and cable construction. Formulas for the sheath-conductor and conductor-conductor voltage surges are derived. Lightning strokes were simulated by current impulses derived from a 50-kv surge generator capable of developing currents up to 20 ka. The impulses were applied at distances of 100, 750, 1400 m from a repeater station between the cable and a

Card 1/2

L 3943-66

ACCESSION NR: AP5018029

ground electrode buried at 100 m from the cable; impulse heights used were 1.5—10 ka; the measured sheath-conductor surge voltages were 0.42—95 v. It is found that, with a sound cable, the induced surges are not hazardous; they may reach hazardous values if one of the cable conductors is faulty (broken or grounded). However, in the latter case, the equipment is adequately protected by an P-4 lightning arrester. Orig. art. has: 6 figures, 9 formulas, and 2 tables.

TITLE: Structure of complex compounds of beryllium oxyacetate with ammonia and primary fatty amines

SOURCE: AN SSSR. Doklady, v. 167, no. 2, 1966, 342-345

TOPIC TAGS: beryllium compound, ammonia, amine, vibration spectrum, hydrogen bonding, molecular structure, IR spectrum, chemical stability, chemical composition, acetate

ABSTRACT: Investigations of the vibration spectra of  $\text{Be}(\text{OCOCH}_3) \cdot 2\text{NH}_3$ 

indicated that the acetate groups in this complex compound are monodentate.

Evidently they participate in the formation of a six-membered ring because of the intramolecular hydrogen bond.

The authors arrived at this conclusion having studied the infrared absorption spectra of the following compounds

 $\text{Be}(\text{OCOCH}_3)_2 \cdot 2\text{C}_2\text{H}_5\text{NH}_2$  and  $\text{Be}(\text{OCOCH}_3)_2 \cdot 2\text{C}_2\text{H}_5\text{NH}_2$ . Six-membered rings constructed

on the basis of the H-bond should impart additional stability to the compound

as a result of the action of the entropy factor. From these positions it is

possible to explain the structure and also the special stability of the com-

pounds of beryllium oxyacetate with ammonia and amines with the composition

of 4 : 1 and 3 : 1. The intramolecular hydrogen bonds play a great role in the

formation of the compounds investigated. The vibration spectra of the above

beryllium oxyacetate compounds were studied. The spectra of the corresponding

compounds of normal beryllium acetate were also studied. The results which

confirm the structures proposed will be published later. Orig. art. has: 4 figures.

USSR/Engineering - Automobile brakes

Card 1/1 : Pub. 12 - 5/16

Authors : Novoselov, I. V.

Title : The selection of brakes for light low-displacement automobiles

Periodical : Avt. trakt. prom. 7, 20-23, July 1954.

Abstract : An account is presented of an analysis and selection of brakes for a light automobile "Moskvich". Various shortcomings of existing brakes used in "Moskvich" automobiles are pointed out, and a comparison is made with brakes used by the American made cars of the 1952 series. Four references. Drawings; diagrams; tables; graphs.

TITLE: Ball joint. Class 47, No. 171230

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 10, 1965, 104

TOPIC TAGS: ball joint, automobile suspension, kingpinless automobile suspension.

ABSTRACT: An Author Certificate has been issued for a ball joint for the independent kingpinless front suspension of an automobile. For improved hermetic seal, inside the lower part of the housing is a groove for a packing ring which is held in place by an end cap retained by a check ring (see Fig. 1 of the Enclosure). The ball joint's weight and size can be lowered if the center of the outer joint-housing sphere is displaced relative to the center of oscillation. Orig. art. has: 1 figure. [KT]

TITLE: Galvanomagnetic properties of molybdenum crystals in intense effective fields

SOURCE: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 51, no. 5, 1966, 1311-1316

TOPIC TAGS: molybdenum, crystal, molybdenum crystal, single crystal, transverse magnetic field, galvanomagnetic effect, Hall effect

ABSTRACT: The anisotropy of galvanomagnetic properties (Hall effect which is even with respect to a magnetic field of transverse voltage and magnetic resistance) of a high purity single crystal is investigated at liquid helium and liquid hydrogen temperatures in transverse magnetic fields up to 25 koe. The results are discussed within the framework of the theory of galvanomagnetic phenomena [I. M. Lifshits,

TITLE:

Accelerated Start of Operation of a Shaft Furnace for Dolomite Burning (Uskorennyy pusk shakhtnoy dolomitoobzhigatel'noy pechi)

PERIODICAL:

Ogneupory, 1959, Nr 7, p 331 (USSR)

ABSTRACT:

At the suggestion of V. G. Goryunov and Ye. A. Mustayev, a new method of starting operation of shaft furnaces after repairing their linings was introduced in the department for dolomite burning of the Magnitogorsk Metallurgical Kombinat. The lower part of the furnace was charged with burnt - instead of raw - metallurgical dolomite of the fraction from 4 to 20 mm. The furnace was then heated with wood, and charged with 1500 kg of raw dolomite and 450 kg of metallurgical coke. The furnace worked normally 24 to 28 hours after heating. Until the introduction of the new method, a yearly sum of about 100000 roubles was spent without any use. After the introduction of this method, production could be started one day earlier, and a yearly additional quantity of 760 t of burnt metallurgical sorted dolomite could be obtained.
