INTERNATIONAL CONGRESS OF REFRIGERATION 1973

International Congress of Refrigeration. Moscow, 1973. Soviet edition of IIR (collected Soviet Reports) Moscow, Gostorgizdat, 1974. 231 p. Russian only. Printed. 2,000 copies printed.

M. (Title page); Sh. E. Kuchshvili; M. (Inside book); E. V. Chikobv; Sakh. M. V. T. Shidava.

NOTE: This collection of articles is intended for those interested in the problems of food refrigeration.

CONTENTS: The collection contains 26 reports which were submitted at the meeting of the 2nd, 4th, and 5th Commissions of the International Institute of Refrigeration. The meeting was held in Moscow, September 2-6, 1973, and was attended by 85 Soviet specialists and 215 representatives from other countries. The 23 reports discussed at this meeting cover such broad areas as the automation of the cooling of refrigerating installations, the use of fluorescent-type refrigerating devices, fast-freezing food freezers, the theory and techniques of rapid cooling and freezing of meat and fish, the use of stabilizers in the cold storage of food, and the operation of refrigerators and cooling systems. A complete account of the proceedings of the meeting was published by the International Institute of Refrigeration in 1974. The abbreviations are mentioned. References follow several of the articles.

TITLE: Experimental study of gasdynamic parameters in a four-stage axial compressor

SOURCE: Energomashinostroyeniye, no. 7, 1963, 9-11

TOPIC TAGS: axial compressor, gasdynamic parameters

ABSTRACT: The effect of the numerical order of individual stages in a multistage high-pressure axial compressor on the distribution of the gasdynamic parameters has been investigated on the experimental stand of TskTI. The flow-through area of the test section was formed by four K-70-16 stages whose blades were adapted for the experiments by means of root undercutting. Total and static pressures, as well as angles of absolute velocities, were measured along the blades behind each stage of the rotor and stator. Some of the experimental data obtained are shown in Figs. 1, 2, and 3 of the Enclosure. It is concluded that the distribution of gasdynamic parameters along the blades in multistage axial

Card 1/5

L 9982-63
ACCESSION NR: AP3003432

compressors depends substantially on the stage number. The pattern of the distribution as a rule does not repeat itself and is quite different from the distribution obtained in the initial design calculations for the stages. The distribution depends on the actual geometry of the flow-through area and on the type of the initial stage, and therefore the results obtained should not be transferred to other types of multistage compressors. TITLE: Analytical expression for the dependence of the density of liquid oxygen on temperature and pressure

SOURCE: ^{11,55}Inzhenerno-fizicheskiy zhurnal, v. 9, no. 6, 1965, 802-803

TOPIC TAGS: thermodynamic property, liquid oxygen, fluid density, temperature, pressure

ABSTRACT: The article proposes an approximate relationship between the density ρ , temperature T , and pressure p of liquid oxygen. Data from the literature were processed by the method of least squares. For the determination of the density of liquid oxygen in the temperature range from 153 to 83 K at pressures of $(78.5 - 196) \times 10^5 \text{ n/m}^2$, the following analytical relationship is recommended:

$$\rho = a_0 + a_1 \left(\frac{T}{100} \right) + a_2 \left(\frac{T}{100} \right)^2;$$

Card 1/2

UDC: 532.10+532.14

L 1124-66

ACC NR: AF6002004

0

$$a_0 = 1,48472 - 0,08545 \left(\frac{1}{p}\right) \cdot 10^7 - 0,06936 \left(\frac{1}{p}\right)^2 \cdot 10^{14};$$

$$a_1 = -0,3210 + 0,27106 \left(\frac{1}{p}\right) \cdot 10^7 + 0,096632 \left(\frac{1}{p}\right)^2 \cdot 10^{14};$$

$$a_2 = -0,000412 - 0,25723 \left(\frac{1}{p}\right) \cdot 10^7 - 0,0026284 \left(\frac{1}{p}\right)^2 \cdot 10^{14}.$$

Results calculated by this relationship gave satisfactory agreement with experimental data. The largest error was at temperatures of 153-143K. and pressures of $(78.5 - 98.0) \times 10^5 \text{ n/m}^2$. For the other regions, the deviation was less than 1%. Orig. art. has: 1 table. [06]

TITLE: Effect of nonuniform distribution of axial velocity projection at the inlet in the working apparatus of an axial-flow compressor on the basic parameters of a stage

SOURCE: IVUZ. Energetika, no. 6, 1966, 113-115

TOPIC TAGS: compressor stage, refrigeration, axial flow, pressure, flow

ABSTRACT: The effect of nonuniform distribution of axial velocity projection at the inlet in the working apparatus of an axial-flow compressor on the discharge and pressure coefficients of an individual stage was studied. The calculation results show that 1) a deviation of the axial velocity projection at the inlet in the stage effects a deviation of the discharge and pressure coefficients of the stage, 2) an increase of the axial velocity projection at the periphery results in an increase of the discharge and pressure coefficients of the stage, and 3) an increase of the axial velocity projection at the bushing results in a decrease of the discharge and pressure coefficients of the stage. Orig. art. has: 1 figure and 12 formulas.

NOVOTELNOVA, N. S. NOVOTELNOVA (Mina N. S.). Некоторые наблюдения над условиями прорастания телеоспор и базидиоспор *Puccinia graminis* f. *avenae* и уредоспор *Puccinia triticina*. (Some observations on the germination of the teleutospores and basidiospores of *Puccinia graminis* f. *avenae* and of the uredospores of *P. triticina*.) — *Pl. Prot. Leningr.*, 1935, 4, pp. 99-106, 1935. [English summary. Received May, 1936.]

AM

A summarized account is given of controlled experiments, the tabulated results of which showed that the teleutospores of *Puccinia graminis* f. *avenae* on oat straw kept over winter in an unheated glasshouse failed to germinate in the spring, while those on straw kept outdoors germinated freely. The minimum temperature for germination was between 9° and 12° C., the optimum 22°, and the maximum 30°. The spores were killed after 24 hours' exposure to 30°, but temperatures below the minimum did not affect their viability. No germination of the teleutospores occurred at relative humidities below 100 per cent. They germinated equally well both in daylight and in the dark. The basidiospores of the rust only germinated in water, and their temperature relations were: minimum 6° to 9°, optimum 17°, and maximum 27° to 30°.

The optimum temperature for the germination of *P. triticina* uredospores was 20° to 25°, with a minimum at 9° and a maximum a little above 30°. Wetting of the spores at the minimum and optimum temperatures stimulated, and at the maximum depressed their germination. The viability of uredospores that were dried after wetting was considerably reduced, high temperatures during drying accelerating the loss in germinability.

NOVOTELNOVA, N. S.

AM

NOVOTELNOVA (Mme N. S.). Влияние температуры и влажности на прорастание конидий *Phytophthora infestans* (Mont.) de Bary. [Influence of temperature and humidity on the germination of the conidia of *Phytophthora infestans* (Mont.) de Bary.]--*Pr. Prot., Leningr.*, 1937, 12, pp. 79-86, 2 figs., 1 graph, 1937. [English summary.]

In studies on the germination of conidia of *Phytophthora infestans* [R.A.M., xiii, p. 724; xv, p. 45], the author found that direct germination (by germ-tubes) occurred within a temperature range of 4° to 30° C., indirect germination (by zoospores) between 6° to 21° only, and combined germination (in which the germ-tube originally formed is transformed into a secondary conidium, germinating directly or indirectly) between 24° and 30°. The optimum temperature was 25° for direct, 10° to 15° for indirect, and 24° to 28° for combined germination. The conidia withstood four hours at 35° and 48 hours at 1° to 3°, but under dry conditions they rapidly lost their viability (within 30 mins.). The appearance of *P. infestans* in epidemic form is correlated with rain or dew combined with comparatively low temperatures, conditions which promote the germination of zoospores.

TITLE: Incidence of sleep activity in EEG of psychiatric patients [This paper was presented at the Czechoslovak-Polish Symposium on EEG held in Sopot on 25 May 1964.] 22

SOURCE: Ceskoslovenska psychiatrie, 6 no. 4, 1965, 234-239

TOPIC TAGS: EEG, psychophysiology, psychoneurotic disorder

ABSTRACT: 1219 EEG curves of psychiatric patients were investigated; sleep activity appeared in 27.7%; it appeared in the second half of the examination and lasted 15-20 minutes. External stimuli made it disappear, but in 43% it appeared again during hyperventilation. In normal curves superficial sleep curves are more frequent; in abnormal records deep sleep is found more often. All 6 manic patients examined had sleep activity. Sleep-rhythm frequency was less frequent in abnormal curves, mainly in adolescents and in people with mild sleep disturbances. Sleep activity during hyperventilation depends on the length of the examination. Sleep activity in macrorhythms of EEG is connected with marginal factors of psychic disorders. Orig. art. has: 1 figure and 1 table. [Based on author's Eng. abst.] [JPRS]

TITLE: Electroclinical correlations of high-voltage alpha rhythm in EEG of psychiatric patients [This paper was presented at the Third Interdisciplinary Conference on Experimental and Clinical Study of Higher Nervous Functions held in Marianske Lazne from 19 to 23 October 1964.]

SOURCE: *Activitas nervosa superior*, v. 7, no. 2, 1965, 196-197

TOPIC TAGS: EEG, psychoneurotic order, psychiatry, electrophysiology

ABSTRACT: 775 patients were studied. 183 had a mean alpha-rhythm voltage higher than 50 microvolts, 513 between 20 and 50, and 79 below 20. Higher incidence of high voltage indicates an abnormal EEG curve, marked alpha-rhythm modulations, diffuse beta activity, and no changes in the hyperventilation curve. Patients with slow alpha-rhythm frequency have an increase of high-voltage activity in the age group over 45; between 20 and 45 a decrease was observed. Patients with brain concussion and epilepsy show a more frequent high-voltage alpha rhythm. High voltage is frequently combined with EEG characteristics of lower stability. The lability of the brain increases at ages over 45. [JPRS]

Title : On the Structure of the β Pyrrolines

Orig Pub : Chem. listy, 1958, 52, No 4, 654-662

Abstract : The infrared spectrum of 1, 2, 3, trimethyl-2-ethylidene pyrrolidyne was used to establish the frequency of the exocyclic double bond $C=C$ in α, β unsaturated tertiary amines with a 5-term ring. Comparison of the infrared spectra establishes that the majority of the α, β unsaturated tertiary bases, heretofore denoted as 1-methyl, 2-alkyl- Δ^2 pyrrolines, are encountered only in the form of isomer 1-2-alkyliden pyrrolidynes. The results of the measurements have shown that only the 1, 2-dimethyl- Δ^2 pyrroline has an endocyclic double bond $C=C$. The infrared spectrum of 1, 2, 3-trimethyl- Δ^2 .

no. 6, 1962, abstract 6-2-162 y (Czech. Patent, cl.
21a4, 70, no. 97653, 15.12.1960)

TEXT: The object of the patent is a mechanical limiter of the number of revolutions for drives and control systems. The limiter is intended for use in those systems where Geneva-movement type mechanisms are used for analog problem solution. The limiter is of simple construction and small dimensions and thus superior to mechanisms of the above type. [Abstractor's note: Complete translation.]

Abstract [Authors' English summary modified]: The method uses a solvent mixture of formamide and benzene. The identification is based on simultaneous occurrence of metabolites of amidopyrine (4-methylaminoantipyrine, 4-aminoantipyrine, rubazonic acid, and methylrubazonic acid. Amidopyrine and its metabolites are identified by color reactions with 7 reagents. 2 Figures, 1 Table, 9 Western, 6 Czech references. (Manuscript received 1 Dec 65).

"Point System in the Prevention of Thromboembolic Disease"

Prague, Casopis Lekarů Ceskych, Vol CII, No 35, 30 August 63, pp 951-955.

Abstract[Authors' English summary]: Investigated was the possibility of using a point system as a basis for the prevention of thromboembolism. A conclusion was reached that the problems of prophylaxis in thromboembolism cannot be resolved by a general prophylaxis. The point system was found inadequate because it cannot express the basis and dynamics in the development of the thromboembolic disease. The authors think that effective prophylactic measures should be sought in biochemistry and physics. Forty-seven references, including 7 Czech and 1 Hungarian.
