TITLE: Experience with treatment by Bernard's currents (diadynamic) in neurology 22

SOURCE: Ceskoslovenska neurologie, no. 1, 1966, 59-64

TOPIC TAGS: neurology, electric current, man, therapeutics, cardiovascular system, electric anesthesia

ABSTRACT:

The authors found that treatment with low frequency Bernard's currents gave very good results in 200 patients with a lumbosciatic syndrome. Favorable results were noticed in 78.5% of the cases. 128 of the patients were hospitalized; this facilitated a good follow-up of the treatment. 15 cases of vasomotor disturbances in the extremities were treated; all patients recovered. The analgesic effect of the diadynamic current is similar to that of Novocaine. Treatment of trigeminal neuralgia was not successful. Orig. art. has: 3 tables. [Based on authors' Eng. abst.] [JPRS]

Psychiat. Klin. Masarykovy Univ. v Brne. Odvykaci of Lecby alcoholism Treatment of alcoholism by breaking of the habit "Lek. Listy 1950, 5/21 (632-634)"

A report of the treatment of 62 alcoholics by provoking the vomiting reflex with apomorphine or with antabuse. Both methods can be successful in suitably selected cases, provided psychotherapy is used simultaneously. Treatment with antabuse does not eliminate a moderate drinking of spirits. Following a preparation with antabuse, ether was given by inhalation in place of alcohol in 4 cases. After an anaesthesia of 1 hour's duration no acetaldehyde symptoms were noted.
