TITLE: Machine for cutting meat, liver, and udder

SOURCE: Myasnaya industriya SSSR, no. 5, 1965, 39-40

TOPIC TAGS: food product machinery, processed animal product, ~~liver, cutting tool~~

ABSTRACT: A diagram of the cutting tool for meat and other foodstuffs is shown below. The machine consists of a frame (1), a drive mechanism (2), pins fixed on a chain (3), and cutting disks (4). Pieces of meat are pinned on the pins and put under the cutting disks. The space between the disks is regulated by plates depending on the thickness of the meat pieces. The disks revolve at a rate of 450-500 r.p.m. A pipe with cold water for moistening the disks and facilitating the cutting process is included in the design. The electric motor has a power of 2,8 kw and revolves at a rate of 950 r.p.m. The machine operates noiselessly and carries out the work of three employees. Orig. art. has: one figure.

TITLE: Determination of microimpurities in caustic alkalis

PERIODICAL: Zavodskaya laboratoriya, v. 29, no. 2, 1963, 156-158

TEXT: The colorimetric determination of 10^{-5} - $10^{-6}\%$ Cu, Pb, Ca, Ni, Fe, Hg, Mn, and of the sum of heavy metals in alkalis is described. The sum of heavy metals of the hydrogen sulfide group is determined by extracting the diethyl dithiocarbamate complexes from the alkali neutralized by HCl. The extract is evaporated, moistened with H_2SO_4 , calcined at $600^{\circ}C$, and dissolved in HCl. The sulfides are precipitated with water containing hydrogen sulfide and the color of the solution is compared with a calibration scale in acetic acid medium. The absolute sensitivity is $2\mu g$ in 4-5 ml of the enriched solution (referring to Pb). Since mercury volatilizes in this treatment a weighed portion of NaOH is neutralized by HNO_3 , it is boiled with $KMnO_4$, the excess permanganate is reduced by oxalic acid, the disturbing elements are bound with Trilon B at pH = 4,
Card 1/3

Determination of microimpurities in ...

S/032/63/029/002/006/028
B101/B186

and Hg is determined with dithizon. The sensitivity is $5 \cdot 10^{-6}\%$. Copper is determined by extracting the diethyl dithiocarbamate complex at pH = 4 from NaOH neutralized by HCl. Disturbance by Fe(III) is prevented by sodium pyrophosphate, the disturbance of the other ions by Trilon B. The determinable minimum amount of Cu is 0.1 μg in 0.5 ml of CCl_4 extract.

To determine Pb, NaOH is neutralized by HNO_3 , and the dithizon complex of Pb is extracted with CCl_4 at pH = 8. Precipitation of the hydroxides is prevented by ammonium citrate, Fe(III) is reduced by hydroxylamine, Cu is bound by KCN. Only Bi is disturbing. Pb can be separated from Bi by re-extracting Pb into the aqueous phase in acid medium. The sensitivity is $2.5 \cdot 10^{-6}\%$. To determine Ni, NaOH is neutralized by HCl and the nickel dimethyl glyoximate is extracted by chloroform. After re-extraction into the aqueous phase, Ni is determined with dimethyl glyoxime in the presence of iodine. The sensitivity is $1 \cdot 10^{-6}\%$. Fe is photocolormetrically determined as sulfosalicylate complex in NaOH neutralized by HCl. The sensitivity is $1 \cdot 10^{-5}\%$. To determine Ca, NaOH is neutralized by HCl, evaporated to dryness, and CaCl_2 extracted by ethyl alcohol. The heavy

Card 2/3

Determination of microimpurities in ... S/032/63/029/002/006/028
B101/B186

metals are previously separated as diethyl dithiocarbamate complexes.

Ca is determined by murexide. The sensitivity is $5 \cdot 10^{-5}\%$. Mn is determined by the usual silver persulfate method by extracting the diethyl dithiocarbamate complex from NaOH, calcining, and oxidizing Mn to Mn(VII). The sensitivity is $1 \cdot 10^{-6}\%$. Maximum sensitivity can be reached with weighed portions of 20-50 g of dry NaOH. The method was tested on mixtures of pure salts. There are 1 figure and 1 table.

TITLE: On the electron gas energy relaxation mechanisms in n-type InSb at helium temperatures

SOURCE: Physica status solidi, v. 14, no. 2, 1966, 511-521

TOPIC TAGS: indium antimonide, relaxation energy, piezoelectric scattering, phonon, crystal lattice, Hall constant, electric conductivity

ABSTRACT: The relaxation time of the electrical conductivity (σ) and the nonlinear coefficient β were investigated in n-type InSb as a function of the dc power applied to the samples. Measurements of the active and reactive components of σ were performed between 1.8 and 4.1K. Samples 10 x 1 x 1 mm with an excess electron concentration = $3-5 \times 10^{13} \text{ cm}^{-3}$ and a mobility $\approx 2-5 \times 10^4 \text{ cm}^2/\text{v}\cdot\text{sec}$ were used in the experiments. It was established that the average electron relaxation time in InSb at helium temperatures depends on the power supplied to the sample. This dependence is not monotonic, due to the change of

Card 1/2

L 23463-66

ACC NR: AP6012806

4-
mechanisms of energy transfer to the lattice from the electron gas during increase of its temperature. When the temperature of the lattice is that of liquid helium and the electron temperature is less than 8K, the predominant mechanism of energy loss is the loss by the piezoelectric potential of acoustic phonons. This mechanism determines the increase of τ with T and also the S-type shape of the dc current-voltage characteristic at low lattice temperatures. The deformation potential of acoustic phonons contributes relatively little to the energy loss. From the data on τ/T it was determined that the piezoelectric modulus in InSb $e_{14} = 2.6 \times 10^4 \text{ dyn}^{1/2} \text{ cm}^{-1}$ and that the deformation potential constant $\mathcal{E}_e < 10 \text{ eV}$. At $T \geq 10 \text{ K}$ the predominant energy loss mechanism is the generation of optical phonons. However, it is necessary to calculate a special electron energy distribution function in the electrical field to take into account this dissipation. The authors are grateful to Sh. M. Kogan for valuable discussion, to G. A. Zhurkina for performing the computations, and to Yu. E. Barkalov and E. A. Lobodayev for their assistance in carrying out the measurements. Synthetic oxytocin was administered to 412 pregnant women and parturients to induce labour (33), to stimulate labour contractions (245) and to facilitate obstetric manipulations (134). Induction of labour was obtained in 84.8% of cases, and spontaneous labour after induction in 92%. The neonatal mortality was 1.08%. A distinct superiority of i. v. drip over i. m. administration was noted. The authors are of the opinion that in cases of late toxæmia of pregnancy an oversensitivity of the uterus to oxytocin may sometimes be present. In these cases it may be of advantage to administer spasmolytics, which, by decreasing the sensitivity of the uterus to oxytocin, may transform a uterine spasm into a normal contracting function.

ABSTRACT: Continuation of work on the synthesis and properties of N-heterocyclic
compounds condensed in the ortho position with cycloparaffins is reported. Of par-
ticular interest were compounds having an alicyclic ring condensed in the 2 and 3
positions, and an alkyl in position 6 in pyridine. Systems having two alicyclic
rings condensed in positions 2, 3 and 5,6 with pyridine were also investigated.

Title: On Utilization of By-Product Glauber Salt

Original

Periodical: O wykorzystanie odpadowej soli glauberskiej, Chemik, 1955, 8, No 9,
243-248; Polish

Abstract: Review of references on methods of production and dehydration of
Glauber salt (GS) developed essentially in USSR. There are
presented schemes of processes of dehydration of GS, repeated
crystallization and drying in a drum drier at 600-800° with partial
utilization of the resulting anhydrous salt.

TITLE: Three term photoelectric controller

PERIODICAL: Pomiar, Automatyka, Kontrola, no. 1, 1962, 44

TEXT: The prototype of a new controller is described. It was designed and made at the Pracownia elektryczna zakl. automatyki (Electrical Department of the Automation Enterprise). The controller operates as follows: A flag fixed to movement of the measuring instrument moves between the light source and the photo-resistor which serves for setting the desired value. The output from the resistor changes the control current which is corrected in the feed back loop. The settings for the correcting network are in front of the instrument. The controlled variable is measured by means of a bridge. The controller, in the first place, is intended for temperature control between 1000C : 6000C with the possibility of extending the range of controlled temperature above 6000C. By a simple modification the controller can be used for controlling pH.

Card 1/2

Three term photoelectric controller:

P/034/82/000/00/000/000
D242/D303

Technical specifications: 1) Proportional band 3 - 200 %, 2) Reset 0.5 - 15 mins. (in 12 steps), 3) Rate 0.1 - 4 mins. (in 12 steps). It is possible to make this controller either type P, PI, or PD by switching off appropriate parameters. Control current is 0.5 - 5 mA into 20 k-ohm load. Supply: 220 V a.c. There are 2 figures. ✓

Title : The Results of Treating Hypertonic Disease with
Carboethoxy-Hydrazine-Phthalazine Hydrochloride.

Orig Pub : Polski tygod. lekar., 1957, 12, No. 20, 747-751.

Abstract : The systolic and diastolic arterial pressure of
16 out of 20 patients with hypertonic disease de-
creased as a result of treatment (the daily do-
sage of the preparation was 60 mg; I). An impro-
vement in the general state of health and sleep
and the stopping of headaches were observed in
every patient, while slowing down of the heart

SOV/38-22-5-6/10

TITLE: Cauchy Problems and Boundary Value Problems for the Equation of the Type of Instationary Filtration (Zadacha Koshi i krayavyye zadachi dlya uravneniy tipa n'estatsionarnoy fil'tratsii)

PERIODICAL: Izvestiya Akademii nauk SSSR, Seriya matematicheskaya, 1958, Vol 22, Nr 5, pp 667-704

ABSTRACT: The authors consider the Cauchy problem and the first and second boundary value problems for the equation

$$(1) \quad \frac{\partial u}{\partial t} = \frac{\partial^2 \varphi(t, x, u)}{\partial x^2}.$$

Here $\varphi > 0$, $\varphi'_u > 0$ for $u > 0$ and $\varphi = \varphi'_u = 0$ for $u = 0$. For each problem a generalized solution is defined and its existence and uniqueness is proved. It is shown that in all points in which (1) does not degenerate, the generalized solution has continuous derivatives which satisfy (1) in the usual sense. The authors formulate 23 theorems with definitions and conclusions. Most of the results are already published (see [Ref 9, 10, 11]).

There are 16 Soviet references.
