Electrical conductivity of glasses of the system SiO_2 - Na_2O - BaO . G. Petrovskij (Vysoka škola chem.-tech., Prague). *Silikáty* 3, 336-42(1959).— The cond. of 26 Ba-Na glasses was examd. A ternary diagram of the system SiO_2 - Na_2O - BaO shows vertical lines of equal resistivity perpendicular to the lines of equal SiO_2 compn. Resistivity increases with BaO and decreases with Na₂O content. 12 references.

Title : On the Choleretic Action of Bupleurum Exaltatum,
Agrimonia Asiatica, Leontopodium Ochroleucum, and
Veronica Virginica

Orig Pub: Farmakol. i toksikologiya, 1957, 20, No 1, 75-77

Abstract: The choleretic action of Bupleurum exaltatum,
Agrimonia asiatica, Leontopodium ochroleucum, and
Veronica virginica was studied in dogs with gall
bladder fistulas and ligated common gall ducts. It
was established that Bupleurum exaltatum and Leonto-

podium ochroleucum possess a choleretic action. The introduction of 30 ml of a 5-percent infusion of Bupleurum exaltatum increased the secretion of bile 44 to 47 percent, and the introduction of 30 ml of a 5-percent decoction by 50 percent. The concentration of bile salts decreased 4 to 16 milligrams per 100, the total amount of cholate increased, and the concentration of bilirubin decreased. The introduction of a 5-percent infusion of Leontopodium ochroleucum caused the increase of the secretion of bile of 27 percent, and the introduction of a 10-percent infusion [doses are not indicated--editor] by 42 percent. The concentration of bile salts decreased correspondingly by 11 to 30 milligrams per 100. The total amount of cholates increased from 1,396 to 1,630 grams. Concentration of bilirubin decreased

1. Introduction

The influence of opium and its alkaloids upon the bile ducts. G. A. Petrovskii, A. G. Kravchenko and N. G. Severyn. *Bull. Biol. med. exp. U. R. S. S. S.* 459-62 (1940) (in English).—The administration *per os* of 0.1-0.25 g./kg. body wt. of chloral hydrate into dogs with chronic bile fistulas caused a decrease in the tonus of the smooth musculature of the duodenum (I) and of the sphincter of Oddi (II). Subsequent injection of pilocarpine (III) induced a rise of the tonus of II and increased peristalsis of I, while atropine (IV) gave relaxation with reduced peristalsis of I. Medinal in doses of 0.05-0.3 g./kg. caused a slight lowering of the tonus of II in 4 and had no effect in 2 cases. In all cases lowered tonus and reduced peristalsis were observed in I. Phenobarbital in doses of 0.05 g./kg. lowered the tonus of II and reduced peristalsis of I. Subsequent injection of III raised, and IV lowered, the tonus of II. Trional (0.1 g./kg.), hexonal (0.01-0.05 g./kg.) and tinctura valeriana (25 drops) gave variable results. Morphine (0.0025-0.005 g./kg.) and codeine (0.005 g./kg.) caused a rise in the tonus of I and II, while heroin (0.002-0.0025 g./kg.) caused a rise in the tonus of II. Diamine (0.002-0.005 g./kg.) gave less pronounced rises in the tonus of I and II, while narceine had the least spastic effect. Papaverine (0.0025-0.005 g./kg.) in almost all cases caused a definite relaxation of tonus of I and II. Pantopon in all cases gave a relaxation of the tonus of I, followed by a rise. Of 9 cases, 8 showed an appreciable rise in the tonus of II. The increase of tonus of II is unfavorable for the flow of bile and must be taken into consideration when prescribing alkaloids of the morphine group in cases of hepatic disturbances. S. A. Karjala
