TITLE: Polarization of ferroelectrics under the combined influence of static and alternating electric fields /Report, Fourth All-Union Conference on Ferro-electricity held at Rostov-on-the Don 12-16 September 1964/

SOURCE: AN SSSR. Izvestiya. Seriya fizicheskaya, v. 29, no. 11, 1965, 2113-2115

TOPIC TAGS: ferroelectric material, ceramic material, single crystal, dielectric constant, nonlinear effect, harmonic analysis, electric field, dielectric amplifier, harmonic oscillator

ABSTRACT: Capacitors with dielectrics of VK-4M Varikond ferroelectric ceramic, mono-crystalline lamellar bismuth titanate, or triglycine sulfate were excited at 50 cycle/sec in the presence of a dc bias up to 200 V and the currents through them were analyzed with a harmonic analyzer. The results are presented as curves showing the amplitudes of various harmonics of the current (up to the ninth) as functions of the applied ac voltage for different values of the dc bias. The three materials gave qualitatively similar results, the nonlinearity being greatest for triglycine sulfate. With zero dc bias no even harmonics of the current were present and the amplitudes of

Card 1/2

L 7842-66

ACC NR: AP5028134

the odd harmonics increased monotonically toward saturation with increasing ac voltage. The lamellar bismuth titanate produced strong high harmonics and this material may find application in the design of frequency multipliers. Application of a dc bias caused the appearance of even harmonics, shifted the characteristic curves toward higher ac voltages, and produced maxima in the harmonics of the current higher than the first at moderate (100-200 V) ac voltages. The negative resistance due to these maxima may find application in the design of special purpose amplifiers and oscillators. For the Varikond, the third harmonic of the current varied more rapidly with the bias than the fundamental, and the fifth harmonic varied more rapidly than the third, higher gains can therefore be obtained with dielectric amplifiers by using higher harmonics. Of the three materials, the lamellar bismuth titanate had the best nonlinearity and temperature stability characteristics, but it also had the highest ferroelectric hardness and losses. The Varikond appeared to be the most advantageous material of those investigated, although its temperature range and nonlinearity were less than those of lamellar bismuth titanate. TITLE: Dielectric converters of small signals

SOURCE: Vsesoyuznoye soveshchanije po magnitnym elementam avtomatiki, telemekhaniki, izmeritel'noy i vychislitel'noy tekhniki. Lvov, 1962, Magnitnyye elementy avtomatiki, telemekhaniki, izmeritel'noy i vychislitel'noy tekhniki (Magnetic elements of automatic control, remote control, measurement and computer engineering); trudy soveshaniya. Kiev, Naukova dumka, 1964, 138-149

TOPIC TAGS: small signal converter, dielectric converter, second harmonic converter, ferroelectric material, varicond modulator

ABSTRACT: Numerous small-signal converters of the contact and contactless type are currently in use. The most interesting among them seem to be contactless parametric converters utilizing the nonlinear properties of semiconductors and ferromagnetic materials. Another possibility is provided by nonlinear ferroelectric materials which should operate even better than the semiconductor and ferromagnetic devices since the ferroelectrics have a lower noise than ferromagnetic substances (I. A. Andronova,

ACCESSION NR: AT5011602

Voprosy radioelektroniki, Series III, Radiodetali i uzly, no. 5-6, 1960) and the DC resistance of ferroelectrics is very high. Although, in principle, one can design converters using the fundamental or any even harmonics, earlier tests showed that high quality performance may be expected only from devices utilizing the second harmonic output. After outlining their operating principles, the author presents the characteristics of the second harmonic ferroelectric operation, modulator circuits with single-phase excitation, transverse field converters, and two-phase modulator circuits. Experiments showed that dielectric modulators made of commercial variconds possess satisfactory qualitative and quantitative properties. However, the second harmonic varicond modulators exhibited low voltage sensitivity and some residual ferroelectric polarization. The sensitivity may be increased by utilizing thinner plane variconds, but the residual polarization effect will persist until the advent of softer ferroelectrics. "The author thanks Eng. V.M. Ovsyankina for carrying out the bulk of the experimental investigations and Cand. of Techn. Sci. T.N. Verbitskaya for supplying the necessary varicond samples." Circuit of a two-cycle pulse distributor

$R_0$  - discharge resistance;  $T_1 - T_n$  - triodes;  
 $R_k$  - load resistance;  $C$  - input capacitors;  
 $C_H$  - ferroelectric capacitors;  $E_k$  - collector supply voltage; two half-wave rectifiers using diodes  $A_1, A_2$  and resistors  $R_B$ .

at the Moscow Institute of Engineering Physics have shown that a distributor consisting of 10 cells and using ferroelectric capacitors with a triglycine sulfate dielectric and type П-16 triode functioned steadily at frequencies of up to 0.8 Mc and at a maximum operating temperature of 42° to 45° C. The duration of output pulses at 0.5 Mc was 0.4  $\mu$ sec. It was concluded that transistor-ferroelectric cells may be utilized in the development of high-stability contactless remote control and computer systems, which in a number of cases have a higher speed than analogous systems using ferrite-transistor cells.

TITLE: Experimental investigation of the system dielectric amplifier - average power motor

SOURCE: Moscow. Inzhenerno-fizicheskiy institut. Avtomatika i telemekhanika, no. 3, 1962. Sistemy upravleniya yadevnymi energeticheskimi ustanovkami, 44-52

TEXT: The authors discuss the results of experimental investigation into the performance of the two-phase asynchronous ДАД-8/300/400 (DAD-8/300/400) motor speed control system using varicon (Seignette salt) dielectric amplifier. In the experiment the control winding of the motor constitutes the load resistance of a push-pull differential dielectric amplifier, consisting of the supply transformer, four working capacitors (two in series in each arm), decoupling resistors and a bias resistor. Each working capacitor consisted of up to 40 parallel connected BK2-B (VK2-B) varicons. The dynamics of the overall amplifier - motor system was analyzed.

Card 1/2

Experimental investigation ...

S/803/62/000/003/007/012

by using the frequency response technique. The dynamical characteristics show that the dielectric amplifier-motor system may be represented either by serial connection of two aperiodic networks or by one oscillating network with damping greater than unity. A system without a center-tapped transformer was also investigated (the motor windings and controlled non-linear capacitors formed a bridge circuit). The input resistance of the amplifiers was found to be equal to that of the varicon insulation ( $10^8 - 10^9$  ohms) and power gain equal to  $5 \times 10^6 - 10^7$ . Conclusion: dielectric amplifiers can be successfully used for the control of output stages of control systems. There are 8 figures.

TITLE: Dielectric converters  
SOURCE: Moscow. Inzhenerno-fizicheskiy institut. Avtomatika i telemekhanika, no. 3, 1962. Sistemy upravleniya yadevnymi energeticheskimi ustanovkami, 53-65

TEXT: The authors discuss the results of experiments on the performance of dielectric d.c. to a.c. converters using Seignette ceramic capacitors type BK (VK) with 2nd harmonic outputs. It was established that a "residual" second harmonic current exists in all samples for zero value of the d.c. electric field. This current may be reduced by heating the sample above the Curie point with simultaneous superposition of the a.c. field. Thus from the point of view of design of Seignette dielectric modulator, the second harmonic modulator circuits can be characterized by the ratio  $\lambda$  of the maximum current to residual current, by the slope of conversion characteristic and by the value of a.c. field for which  $\lambda$  is maximum.

Card 1/2

Dielectric converters ...

S/803/62/000/003/008/012  
D201/D308

Converter circuits investigated were: 1) the differential circuit, 2) a four-pole varicon circuit and 3) a bridge circuit. Conclusions:

- 1) The varicons made of type VK-1 ceramics can be used for contactless d.c. to a.c. converters, operating at temperatures up to 50°C.
- 2) The lower threshold of sensitivity for simple circuits is  $10^{-12}$  W.
- 3) Since the voltage sensitivity of industrial type varicons is of the order of 100 mV, the converters should be used for small d.c. currents only. The sensitivity may be increased by using circuits with the "film"-type varicons. There are 5 figures.

TITLE: Graphoanalytical design of reversible dielectric amplifiers

SOURCE: Elektrichestvo, no. 3, 1964, 42-44

TOPIC TAGS: ferroelectric capacitor, varicond, dielectric amplifier, dielectric amplifier design, balanced dielectric amplifier

ABSTRACT: A graphoanalytical method of designing balanced dielectric amplifiers is proposed which is similar to the method suggested earlier by M. Ye. Poyurovskiy ("Elektrichestvo," 1956, no. 7) for designing magnetic amplifiers. In this method, the variconds are supposed to be quasi-linear, their capacitance depending on their a-c and d-c voltages, but their currents are regarded as sinusoidal. Then, the amplifier is considered as a resistive non-linear two-pole network, whose fundamental relations are found from a voltage

Card 1/2

THANE I SOVIET EXPLANATION

Moscow, ~~USSR~~ ~~Academy of Sciences~~  
Avtonomika i Avtomatika (Automation and Telemechanics: Collection of Articles) Moscow, 1957, 115 p.  
3,000 copies printed.

Resp. Ed.: M. V. Zaslavskiy, Institute of Technical Sciences, Doct. in Tech. Sci. E. M. Zaslavskiy.

PURPOSE: This collection of articles is intended for engineers and scientists concerned with the field of automatics and remote control and other related areas.

COVERAGE: This collection contains articles by the staff of the Chair of Automatics and Remote Control, Moscow Institute of Engineering and Physics. The subject of each article is simplified in the title to facilitate the editor's selection. The articles have a scientific and practical value. No personalitities are mentioned, references from other articles.

POPOV, P. Dynamic Characteristics of Certain Components of the Automatics. This article describes certain circuits and methods of sectioning them and which make it possible to obtain output values required for the logarithms of input values. The applicability of the applicability of logarithms in relation to various parameters and to the voltage of the power source is explained. The author presents experimental and calculated characteristics of the investigated circuits in which vacuum tubes, germanium diodes, and selenium rectifiers are used. There are 2 references in Soviet and 1 English. There are 7 diagrams. No personalitities are mentioned.

95

Pluzhnikov, V. E. Dynamic Characteristics of Ferroelectric Amplifiers. The author discusses some characteristic curves obtained for a variety of the VK-1 type, controlling reversible capacitance in a function of the controlling d-c voltage. This "dynamic" characteristic is well-known for several ferroelectric amplifiers; however, if instead of a d-c signal, a periodic alternating voltage is applied at the input of the amplifier, a dynamic characteristic is obtained. The author describes a method used to obtain the dynamic characteristics of the VK-1 type various set of other ferroelectric and attempts to explain the physical nature of the obtained "dynamic effect". There are 2 references: 1 Soviet and 1 English. There are 8 illustrations, oscillograms and diagrams. No personalitities are mentioned.

106

Pluzhnikov, V. E. Grapho-Analytical Method of Design of Ferroelectric Amplifiers. The author discusses amplifiers in which ferroelectric amplifiers are utilized for the signals. Properly selected in amplifying a very few satisfactory methods for calculating the electric amplifiers. Considering the relationship between dielectric and magnetic amplifiers, the author applies some well-established methods of calculating magnetic amplifiers to the problem of calculating ferroelectric amplifiers. He also describes a grapho-analytical method for calculating single-cycle dielectric amplifiers. This method was first suggested, according to the author, by the Soviet scientist P. L. Zaslavskiy. The method was further developed by other Soviet scientists. The author discusses the characteristics of ferroelectric amplifiers under various conditions for optimum operation of dielectric amplifiers. There are 9 Soviet references

TITLE: Pentagon gas cloud [Gas warfare in Viet Nam]

SOURCE: Starshina serzhant, no. 1, 1967, 39

TOPIC TAGS: cbr warfare, cbr research, chemical warfare, jungle warfare

ABSTRACT:

Based on foreign sources, such as "The National Guardsman", the author describes toxic gases used by the US in Vietnam. The American chemical weapons have also been of great interest to their allies. Although first stating that the gases used are "irritants", the article goes on to say that due to the American chemical "experiments" more than 6,000 patriots were killed in Binh Khe [Sp?] province in a twenty-day period. It quotes the Indian weekly "Dharmaram" as stating that 80 American soldiers were recently killed and 125 put out of action due to improper handling of the gases.

General Ed.: M.I. Gusev, Major General-Major of the Air Force; Eds.: M.A. Kiselev, Colonel, and M.I. Gusev, Colonel, (ret); Tech. Ed.: M.A. Pivchinskiy.

REMARKS: The book is intended for military personnel. It will be of interest to all those concerned in the role of air power in modern warfare.

COMMENTS: The book surveys the history of the Soviet Air Force and discusses its organization, types of aircraft, combat characteristics, tasks, and armaments. The role of aviation in modern military strategy is analyzed and the cooperation between air, ground, and naval forces defined. Future prospects of development of Soviet aviation are outlined. Some attention is paid to the development and possible use of missiles by the Air Force and to anti-aircraft defense. Photos and specifications of the

 Cows. 1st Report.

ORIG. PUB. : Tr. Grodnensk. s-kh. in-ta, 1957, vyp. 3,  
 173-191

ABSTRACT : It was established that cows with a live  
 weight of 500 kg and an average daily milk  
 yield of 10-15 kg consumed an average of 20.9  
 kg of corn silage daily when it was fed to  
 them as the only juicy feed and they consumed  
 15.3 kg of it daily when it was combined with  
 beets. Feeding corn silage as the only juicy  
 feed did not reduce milk yields and did not  
 effect the cows' physiological state of health.

Orig Pub : Tr. Grodnensk. s.-kh. in-ta, 1957, Vyp. 3, 266-272

Abstract : In rabbits, transection of vagus nerve branches supplying the left lung, after preliminary section of its branches to the liver, produced changes of the blood protein composition as expressed by an increase in the concentration of fibrinogen, the globulins, and (although not in all cases) of the total protein and a decrease in albumin and A:G ratio. According to the author, the data obtained indicate participation of the lung tissue (conveyed by the

TITLE: Introduction of terminal aromatic amino groups into polycaproamide. (First report in a series on "Synthesis and chemical modification of polyamides with reactive groups")

SOURCE: Vysokomolekulyarnyye soyedineniya, v. 8, no. 5, 1966, 903-909

TOPIC TAGS: polymer, amino acid, polyamide, polymerization, molecular weight, ~~polycaproamide~~, amino group

ABSTRACT: The hydrolytic polymerization process of ~~ε-caprolactam~~ in the presence of aromatic diamines and other aminocarboxylic acids has been investigated. It was shown that these compounds are regulators of the molecular weight of the poly-ε-caproamide and that through them it is possible to introduce into the polymer a certain number of aromatic amino groups to preserve the fiber productive capacity. A method of quantitative determination of small concentrations of aromatic amino groups in the polycaproamide was developed. Orig. art. has: 4 figures, 3 formulas, and 1 table.

TITLE: Synthesis and properties of carboxyl-containing polyamides <sup>15</sup>

SOURCE: Vysokomolekulyarnyye soyedineniya, v. 7, no. 5, 1965, 813-816

TOPIC TAGS: polymer, resin, polyamide, polyamide plastic, polycondensation

ABSTRACT: This report is an extension of the method for obtaining hetero-chain polymers with active groups in side chains to polyamides. The introduction of carboxyl groups was undertaken in the hope to increase the solubility and thermal stability of polyamides and to render them useful as ion exchangers. The synthesis consisted of interfacial polycondensation at room temperature of halides of dicarboxylic acids with aliphatic and aromatic diamines. The monomers used were: dichloroanhydride of trimelic acid, (X<sub>1</sub>) N-(6-aminohexyl)-ω-aminocantonic acid (A), dicyclohydrate of N,N'-di-(6 carboxyhexyl)-n-phenylenediamine (N) dichloroanhydride of terphthalic acid (X<sub>2</sub>), dichloroanhydride of sebacic acid (X<sub>3</sub>), dichlorohydrate of m-phenylenediamine (M), dichlorohydrate of n-phenylenediamine

(P), trans-n-diaminocyclohexane (T), piperazine (D), and 1,6-hexamethylenediamine  
(G). The polymers obtained are not thermostable and are soluble in alkalies.  
The polymer alkali metal salts exchange ions with a number of metal salts and  
mineral acids with the formation of insoluble carboxyl-containing polyamides.  
Orig. art. has: 2 tables.

TITLE: Synthesis and properties of polyaryl esters<sup>7</sup> containing carboxyl groups

SOURCE: Vysokomolekulyarnyye soyedineniya, v. 7, no. 4, 1965, 734-746

TOPIC TAGS: polyaryl ester, carboxyl group, heat resistant polymer

ABSTRACT: New polyaryl esters containing free carboxyl groups have been prepared and some of their properties have been studied. The introduction of carboxyl groups was of interest as a means of imparting to the polymers solubility in alkalies and ion exchange properties, and of increasing heat resistance via the formation of salt-like crosslinks. Polymeric and copolymeric polyaryl esters were prepared by interfacial polycondensation of trimesinyl dichloride (I) and/or terephthaloyl chloride (II) and 4,4'-dihydroxy-2"-carboxytriphenylmethane (III) and/or 2,2-bis(4-hydroxyphenyl)propane (IV) in sodium hydroxide solution at room temperature. The properties of the polyaryl esters

1. INTRODUCTION

ABSTRACT

were highly dependent on the monomer structure. All polyaryl esters from I were poorly soluble in dilute alkalies, but soluble in strong alkalies with hydrolysis. Polymers from I and IV were also poorly soluble in cresol and tetrachloroethane; with the addition of II, solubility in cresol appeared. Polymers from II and III were soluble in dilute alkalies in the cold and in cresol. The polyaryl esters melted with decomposition in the range 240—320C. Orig. art. has: 2 formulas and 1 table. [SM]

TITLE: Introduction of terminal aromatic amino groups in poly-ε-caproamide using m-phenylenediamine and its hydrochloride

ЖУРНАЛ: Vysokomolekulyarnyye soedineniya, v. 11, no. 11, 1988, 1488-1497

TOPIC TAGS: caprolactams, chlorohydrate, polymerization

ABSTRACT: A process has been studied for hydrolytic ε-caprolactame polymerization in the presence of m-phenylenediamine and anhydrous or crystalline soda. Optimum correlations of these reagents are found which permit the maximum number of terminal aromatic aminogroups to be introduced in poly-ε-caproamide with a conservation of high molecular weight. It is shown that the addition of dimethylterephthalate in the presence of m-phenylenediamine permits the concen-
