Title : A Few Age Particularities of the Intraosseous Blood Supply of the Hip Joint

Orig Pub : Zdravookhr. Belorussii, 1957, No 4, 51-53

Abstract : It was demonstrated that in fetuses of 6 - 8 months there are no blood vessels in the proximal epiphysis of the hip which penetrate into the growth cartilage. This type of vessel was demonstrated in almost one half of the cases in the indicated area on cadavers of children beginning from the age of 2 days to one year and 11 months. The specific share of the A. colli et capitis femoris inferior in the supply of the head and the neck of the

of Fetuses and Infants.

Orig Pub : Sb. nauchn. rabot. Vitebski med. in-t, 1957, vyp. 8, 69-
74

Abstract : On the basis of cleared-up specimens of the talocrural
joint of 28 cadavers of fetuses, neonates and infants
with injected blood vessels, it was shown that in fetuses
of the second half of intra-uterine life there is a well-
developed system of venous vessels in the articular termi-
nals of the tibial, fibular astrabalar and calcaneal bones.

The veins of the epiphyseal cartilages are connected with the veins of the metaphyses. With growth, the venous system of the nuclei of ossification enters into connection with the veins of the perichondrium. The tributaries of the metaphysial veins originate at the border of the cartilaginous epiphysis; they converge proximally, linking up into major venous trunks, out of which the main diaphysial vein is formed.

Types of colour-sensitivity Vestnik Oftalmologii 1940, 17/5 (637-648)

A series of investigations of anomalous trichromats were made out with the aid of Najel's anomaloscope and the test of Rabkin and Ishihara. Three types could be adopted: A, B and C, for the protanomalous and deuteranomalous. In type A a shifting of the curves for the basic sensations may occur and in type B a deformation of the curves, whereas in type C the deformation is less pronounced. Kalfud - Odessa (Sec.XII)

"The Effect of Fluorescent Lighting on the Time Threshold of Chromatic Fatigue," Probl. Fiziol. Optiki, Vol 8, 1953, pp 154-160

The effect of fluorescent lighting on the level of relative stability of chromatic vision was studied by determining the time thresholds of chromatic fatigue after preliminary adaptation to light sources with various spectral compositions. A Nagel anomaloscope, and exposure to light of different wave lengths coming from incandescent and fluorescent daylight lamps, were employed. Daylight and white fluorescent light increased the stability of chromatic vision. Yellowlight from an incandescent source was much less effective on the green than on the red perception apparatus of the eye. Irritations close to the spectral composition of daylight considerably affected both apparatus. (RZhBiol, No 5, 1954)

SC: Sum. No. 536, 10 Jun 55

RABKIN, YE. B.

Probl. Fiziol. Optiki, 8, 1953, pp 172-176.

A color atlas devised by the author is described. Subdivisions of one color are distributed in an equilateral triangle, one side of which is an achromatic scale divided into 10 steps. The distance of the chromatic axis defines the purity of the color. Lines of equal brightness are perpendicular to the achromatic scale. (RZhFiz, No 1, 1955)

AUTHOR: Rabkin, Ye.B.

TITLE: Colour differentiation with monocular and binocular vision

PERIODICAL: Referativnyy zhurnal, Elektrotekhnika i energetika, no.11, 1962, 1, abstract 11 V3. (Sbornik 'Materialy II Vses. konferentsii oftal'mologov, 1961', Tbilisi, Resp. nauchn. o-vo oftal'mologov GruzSSR (Symposium, 'Materials of the 2nd All-Union Conference of Ophthalmologists, 1961', Tbilisi, Republ. Scientific Society of Ophthalmologists of the Georg.SSR), 1961, 392-394).

TEXT: The nature of the colour-distinguishing ability of the visual analyser during binocular colour observation was compared with that during monocular observation by measuring the values of light thresholds and determining the reaction to visual loads. The colour thresholds were measured for red ($\lambda = 640$ nanometers, $p = 17\%$), yellow ($\lambda = 577$ nanometers, $p = 60\%$), green ($\lambda = 560$ nanometers, $p = 20\%$) and blue ($\lambda = 485$ nanometers, $p = 6\%$). ✓

Card 1/2

Colour differentiation with monocular.. S/196/62/000/011/006/009
E194/E155

With binocular vision the colour thresholds were lower, being sometimes twice as low as with monocular vision. Investigations of reaction to visual load were measured with an assembly of text-objects consisting of a series of tables with numbers and other images which were presented to the test subjects. The data obtained confirmed that binocular vision is more perfect than monocular. It may be supposed that in distinguishing colours the process of converting external energy is associated with correspondence of the retinae and physiological summation of stimuli in the central formations, including binocular blending of colours.

TITLE: Method of studying color vision by using spectral indication.
Class 30, No. 179416

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 5,
1966, 52

TOPIC TAGS: color vision, visual analyzer, color vision test, spectral
indication, color spectrum, human vision

ABSTRACT: An Author Certificate has been issued for a method of studying color vision by means of spectral indication. To increase the accuracy of testing and to decrease diagnostic errors due to color fatigue, the subject is presented a "color equation" made up of colors close to the zone of maximum human sensitivity. These are: 1) monochromatic yellow-green light (spectral line of magnesium) with a wavelength of 570 μ m for half the observation field; 2) light obtained by mixing two monochromatic colors for the other half of the observation field, e.g. red light (spectral line of copper) with a wavelength of

Gazy-moguchiy istochnik energii i khimicheskogo syr'ya (Gases— Powerful
Source of Energy and Chemical Raw Materials) Moscow, Izd-vo AN SSSR,
1959. 80 p. (Series: Akademiya nauk SSSR. Nauchno-populyarnaya seriya)
10,000 copies printed.

Sponsoring Agency: Akademiya nauk SSSR. Redkollegiya nauchno-populyarnoy
literature.

Resp. Ed.: N. N. Nekrasov; Ed. of Publishing House: N. B. Prokof'yeva;
Tech. Ed.: T. P. Polenova.

PURPOSE: The booklet is intended for the general reader.

COVERAGE: The booklet discusses the recovery, manufacture and preparation of
gases for utilization as fuel. The use of gases as raw material for the
production of chemicals, particularly high polymers, is described. No personali-
ties are mentioned. There are no references.

Abstract: The scale of production of coal-tar-chemical cyclopentadiene is unable to satisfy the increasing demand for this intermediate in organic synthesis, in particular, for the production of new antiknock compounds and pesticides. The article gives a tentative evaluation of potential resources of petroleum based cyclopentadiene, isolated from the pyrolysis products of crude oil. The high-temperature decomposition of gaseous and liquid petro-

organic phosphorus compound, resin, hardening

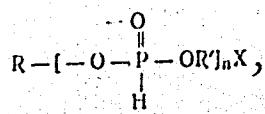

ABSTRACT: This Author Certificate presents a method for hardening epoxy resins by
phosphorus-containing hardeners. To increase the fire resistance of the polymers,
phosphorus-containing polyesters with a reactive hydrogen atom at the phosphorus atom are
used as hardeners. These polyesters have the general formula,

USSR/Medicine - Endocrinology Thyroid

"Variation in Sensitivity of the Thyroid Gland to Thyrotropic Hormone of the Hypophysis Under the Influence of Surgical Trauma," I. A. Eskin, Yu. B. Skebel'skaya
A. Ye. Rabkina, All-Union Inst of Experimental Endocrinol, 3 pp

"Dok Ak Nauk SSSR" Vol LXVIII, No 5

Experimental data led to conclusion that lower functional activity in thyroid glands of rats after surgical trauma was related to decreased ability of the gland to react to thyrotropic hormone. Methylthiouracil does not produce a complete "goiter" reaction because the increase in the gland under its influence is a reaction to greater secretion of the hormone. Fact that surgical trauma has a definite effect on the thyroid gland in both rats and chickens confirms the assumption that the described conditions may be valid in higher organisms. Internal innervation of pancreas in normal and alloxan-diabetic animals. A. E. Rabkina (All-Union Inst. Exptl. Endocrinol., Moscow). *Byulleten Endokrinologii i Gorimono-terapii*, 1, No. 1, 92-7 (1955). — Pancreas of normal rats, rabbits, and dogs possesses a well-developed nervous apparatus. Histological slides are described showing the changes in the nervous tissue of pancreas on administration of alloxan to animals. In alloxan-diabetic rabbits there is a degeneration of the islet portion of the neuro-insular complex; pyknosis and necrotic changes in nuclear substance, and decompr. of cytoplasm of islet cells. In alloxan-diabetic dogs and rats there were sharp changes in nervous tissue: formation of varicose swellings, fragmentation of nerve tissue, and decompr. of neuropil.

Title : Some Data on the Functional State of the Adrenal Cortex
After Irradiation.

Orig Pub : Probl. endokrinol. i gormonoterapii, 1957, 3, No 4, 3-9,
124.

Abstract : Adrenal cortex functions were studied in irradiated rats
on the basis of water tests. After a 700 r irradiation,
diuresis diminished to 60 percent of the norm, a fact
which evidences disturbances of mineral-corticoidal func-
tions of the adrenal cortex. As 2.5 mg doses of DCCA
/desoxycorticosterone acetate/ were administered to irra-
diated animals, insignificant diuresis increases resulted,
but when 5 mg doses were used, distinct diuresis increases

AUTHOR: Rabkina, D.I., Engineer

TITLE: Automation and Organisation of Control in Large-Unit
Type Power Stations (Avtomatizatsiya i organizatsiya
upravleniya na moshchnykh blochnykh teplovых
elektrostantsiyakh) 6 -

PERIODICAL: Teploenergetika, 1959, Nr 3, pp 15-19 (USSR)

ABSTRACT: There is not yet sufficient operating experience of the methods of automation and control that have been adopted at unit-type power stations. Only parts of the automatic system have been fully tested under conditions approximating to practice. Three main groups of problems require further development: definition of objectives and selection of control circuits; the organisation of control and remote manual control; and the selection of control equipment. The requirements of the control system during external and internal disturbances are discussed. In principle it is best to be able to keep the set running when all the load has been dropped but, in practice, this is not always possible. The load-control circuit at present used for boiler-turbine units is illustrated schematically in Fig.1. It includes a speed governor, an isodromic pressure regulator and a static pressure

Card 1/4

SOV/96-59-3-3/21

Automation and Organisation of Control in Large-Unit-Type Power Stations

regulator at the turbine. The static pressure regulator permits of a wide range of adjustment to suit operating conditions. Under normal operating conditions, automatic control requirements in unit-type stations are not much different from those where the sets have a common steam supply and may even be simpler. However, automatic operation of unit sets poses special problems under fault conditions. The most difficult conditions are those that occur when the system loses load suddenly or the turbine and generator are disconnected on fault. The automatic control requirements of this case are discussed. Automatic interlocking between the motors of auxiliary equipment is very similar in unit-type and ordinary power stations. However, additional interlocking will be provided in new stations because the number of operating staff is being reduced. Automatic operation of the unit during starting from the cold is one of the least-studied questions, although a solution appears more feasible than in cases where the unit system is not

Card 2/4

SOV/96-59-3-3/21

Automation and Organisation of Control in Large-Unit Type Power
Stations

employed. On the other hand, automatic starting from the hot condition presents greater difficulty. So far, the best solution is to have a single panel for the control of all the main and auxiliary equipment of two units, including generators and house-service transformers. The only exceptions are fuel delivery equipment and water treatment plants. The best location of control panels is discussed and illustrated diagrammatically in Fig.2. The apparatus that should be installed on the control panels is discussed. Certain special measures, to ensure reliable and convenient operation of the equipment, are enumerated. Although considerable progress has been made in instrument development, the standard regulators and instruments currently available are unsatisfactory. Very good electronic controllers have been developed but they are not suitable for all cases and there is an inadequate range of hydraulic governor gear. The available electrical instruments are not well suited to

Stations

panel mounting. The instruments at present needed for
the control of unit-type sets are specified. There are
