Roudneff, G. V. Sur les équations de Sturm-Liouville ayant des singularités. Uchenye Zapiski Moskov. Gos. Univ. 100, Matematika, Tom I, 113-126 (1946). (Russian. French summary)

The author considers the Sturm-Liouville problem of $(Ry)' - Qy + \lambda \rho y = 0$ where $R(x)$ may vanish at either end of the fundamental interval (a, b) , but not in between. If $R(a) = 0$, then we must have $R(x) \geq a(x-a)$ for some $a > 0$ and $\int_a^b d\xi/R(\xi) = \infty$, and similarly if $R(b) = 0$. Also, $\rho(x)$ may have a finite number of zeros without change of sign in (a, b) . The author extends to this case the construction of the resolvent in terms of Neumann series, the variational properties due to Courant [Courant and Hilbert, Methoden der mathematischen Physik, vol. 1, Springer, Berlin, 1924, pp. 345-352], and the result that $\lambda_n = O(n^2)$. Also considered are the Bessel case, and, by a different method, the general case in which $\int_a^b d\xi/R(\xi)$ converges.

F. V. Atkinson (Ibadan).

Rudnev, G. V. O temperaturnom rezhime prizemnogo sloia vozdukh. [Temperature regime of the air layer near the ground.] *Meteorologiya i Gidrologiya*, No. 8:30-33, Aug. 1952; 4 figs. DLC—Report on microclimatological observations carried out during the summer of 1941 at Alma-Ata Geophysical Observatory for the study of the vertical distribution of air temperature near the ground in the morning hours. Thermometers protected from sun and soil radiation by paper discs were installed in field crop at heights from 2 cm up to 2 m. The author found some differences from analogous investigations made by R. GEIGER, which apparently can be explained by specific conditions of GEIGER's observations, made in a Munich garden where the medium was not similar to natural field conditions. *Subject Headings:* 1. Microclimatology 2. Vertical temperature gradient 3. Alma-Ata, U.S.S.R.—N.T.Z.

The Hydrometeorological Service at the 1955 All-Union
Exhibit of Agriculture

Periodical : Met. i Gidro., 3, 23-24, My-Je 1955

Abstract : The Hydrometeorological Service was assigned to a special pavilion at the fair. The article reports in detail on the materials exhibited, such as maps of water resources and climatic conditions, frost and drought prevention measures, and the weather forecasting process. The work of the floating meteorological stations in the Arctic is presented in graphs and pictures.

AUTHOR: Rudnev, G. V. 50-58-4-25/26

TITLE: Conference of the Heads of Agro-Meteorological Stations (Soveshchaniye nachal'nikov agrometeorologicheskikh stantsiy)

PERIODICAL: Meteorologiya i Gidrologiya, 1958, Nr 4, pp 61-62 (USSR)

ABSTRACT: At the end of November 1957 a conference was held in the main administration of the Hydro-Meteorological Service (Glavnoye upravleniye gidrometeorologicheskoy sluzhby) under participation of representatives of local administrations of the same service and of observatories, of the Central Institute for weather forecast (Tsentral'nyy institut prognozov TsIP), of the Geophysical Chief-Observatory (Glavnaya geofizicheskaya observatoriya-GGO) of the Scientific Research Institute for Aero-Climatology, of zonal hydro-meteorological institutes and a number of other scientific departments (altogether 140 persons). The main issue of the conference were the consultations on the participation of agro-meteorological stations in the research work of the central and zonal institutes of the mentioned service, as well as at the development of

Card 1/3

Conference of the Heads of Agro-
-Meteorological Stations

50-58-4-25/26

regional topics according to the necessities of agricultural production. Some reports are briefly mentioned. In his report on "The present state and the prospects of the agro-meteorological stations" G. V. Rudnev disapproves of the deficient investigation of the agro-meteorological conditions of agricultural production in accordance with the various branches of agriculture, the specific necessities of some cultivated plants and with the principal agricultural techniques. This is the result of a stereotyped planning of the working program and of a lacking consideration of specialization of the agricultural production in the respective regions. In this connection the conference passed a draft according to which such a specialization of the stations with regard to various groups of cultivated plants in different regions is planned. The program is explained. M. S. Kulik lectured on the subject of participation of the stations in the research-work. According to him the respective work is divided into three groups. He stressed the importance of the methodical administration of the whole network of stations, whereby the guidance of the work should be carried out by the stations themselves

Card 2/3

Conference of the Heads of Agro- 50-58-4-25/26
-Meteorological Stations

under consideration of local conditions. Reports of local representatives of the UGMS - Administration of the Hydro-Meteorological Service - (Upravlenie gidrometeorologicheskoy sluzhby) were following and then lectures on agro-meteorology were given. A number of measures were discussed by the conference, which are supposed to serve the development and improvement of the work of the stations and of agriculture.

SOV/50-59-4-9/21

TITLE:

Problems of Agrometeorology in the Cultivation of Steppe and Forest-steppe Areas of the USSR (Voprosy agrometeorologii v zemledelii stepnykh i lesostepnykh rayonov SSSR)

PERIODICAL:

Meteorologiya i gidrologiya, 1959, Nr 1, pp 43-46 (USSR)

ABSTRACT:

An outward meeting of the Vsesoyuznaya ordena Lenina akademiya sel'skokhozyaystvennykh nauk imeni V. I. Lenina (All-Union Order of Lenin Academy of Agricultural Sciences imeni V. I. Lenin) took place in Saratov in October 1958. Problems of the introduction of scientific agricultural methods in the steppe and steppe-woodland areas of the USSR were discussed. The author is of the opinion that the agrotechnical measures suggested in a number of reports require an agrometeorological foundation according to soil and climatic characteristics. M. A. Ol'shanskiy, Academician of the VASKhNIL, delivered a report on "The Problems of Agriculture in the Steppe and Methods of Increasing the Yield in Agricultural Cultivation". - F. F. Davitaya spoke on "The Droughts in the USSR and the Scientific Foundation of Measures for Fighting the Same According to Natural Zones". - An example for the consideration

Card 1/3

Problems of Agrometeorology in the Cultivation of
Steppe and Forest-steppe Areas of the USSR

SOV/50-59-4- /21

of climatic and soil conditions is the suggestion by L. A. Razumova on the use of fallow-land cultivation in the dry parts of North Kazakhstan and the Kulunda Steppe, not on large uninterrupted areas, but on separate alternating tracts with pure fallow land and wheat-growing land. - N. S. Sokolov delivered a report on "The Problem of Soil Cultivation for Increasing the Supply of Fields With Humidity and the Agrotechnical Requirements to Farming Machinery". - S. S. Sobolev gave a lecture on "The Present State and Methods of Fighting Soil Erosion". - The author points out that the problems of considering the water masses in the snow farming fields and the conditions of the melting of the snow are not satisfactorily solved yet. The conditions and the evolution of dust storms, which are a consequence of soil erosion by the wind, are poorly considered in a hydrometeorological respect. An important factor for a successful cultivation of the steppe and wooded-steppe areas is the reservoir irrigation. B. M. Shumakov mentioned in his report that only in the steppe-woodland areas of the RSFSR and the Kazakhstan the areas with reservoir irrigation amount to 1700000 ha.

Card 2/3

Problems of Agrometeorology in the Cultivation of
Steppe and Forest-steppe Areas of the USSR

SOV/50-59-4-9/21

The areas with reservoir irrigation must be extended to 6000000 ha. - The productive agriculture in the steppe and steppe-woodland areas is closely connected with the afforestation for the conservation of fields. The great interest 6-7 years ago of the scientific research offices of the Gidrometeosluzhba in the afforestation for the conservation of fields has decreased to zero at present. - It is pointed out here that the modern afforestation for the conservation of fields has attained new forms, but is being carried out in many cases without sufficient agroclimatic foundation. The Gidrometeosluzhba is requested to take part in the solution of these important economic problems.
