The determination of the phase composition of silver
forms by the x-rayographic method M. P. Sutinenko and

M. P. Sutinenko and
B. V. Kostylev. In the first form of the sample there was
silver and silver iodide. A small amount of
silver iodide was also found in the second form. It is
possible that some other phases were detected. Pb and
Ag were not present. There was more
silver iodide in the first form than in the second. I-B

AUTHOR: Smirnov, M. P.; Rudnichenko, V. Ye.

TITLE: Phase diagram of the Ca-Bi system

SOURCE: Zhurnal neorganicheskoy khimii, V. 8, no. 6, 1963, 1402-1407

TOPIC TAGS: phase diagram Ca-Bi system, differential thermal analysis, Ca eutectic

ABSTRACT: The Ca-Bi system was investigated by differential thermal analysis and by microscopic methods. The following compounds were formed in the system: Ca sub 3 Bi sub 2, fusion temperature 1350 degrees; CaBi sub 3, formed by peritectic reaction at 505 degrees; CaBi, peritectic at 1075 degrees. Ca fusion temperature was established at 865 degrees; a eutectic containing 10% Ca was found, the eutectic line lying at 840 degrees. Below this temperature, in the 100-22% Ca interval there are 2 polymorphic transitions of Ca: at 500 and at 325 degrees. A number of these figures contradict those of Kurzyniec (Bull. Intern. Akadem. Polonaise, A, 1931, 31-58). Orig. art. has: 1 table and 4 figures.

Abstract: who had not had acute intestinal infections for the past two years. In all sera, A were found against every dysentery group with the highest content of A with respect to Flexner and A-D group bacteria. In 20 samples of umbilical blood dysentery, A were not found, while sera of the mothers contain these A in sufficiently high titer. No parallel was found between the rate of isolation of separate types of dysentery bacilli in a given locality and the detection of homologous normal A. The authors reject the hypothesis on the origin of natural A as a result of the transfer of a corresponding symptomless infection, as well as their protective role during a homologous

AUTHOR: Rudnicki, A.A.

TITLE: High-Temperature Thermoelements Made of Precious Metals

PERIODICAL: Pomiary-Automatyka-Kontrola, 1960, No. 4, pp. 145 - 146

TEXT: The paper constitutes a report presented by A.A. Rudnicki, USSR, at a symposium on thermoelectric thermometry held in Łódź on 1st and 2nd March 1960. The subject is introduced with general aspects such as resistance to oxidation in high temperatures, melting points of metals and alloys, diffusion processes and reduction atmosphere. Aluminum oxide (Al_2O_3) is specified as the most suitable insulator for high-temperature thermoelements. Suitability tests which involved the alloys PtRh13-PtRh1, PtRh30-PtRh6, PtRh20-PtRh5, PtRh40-PtRh20 and Rh-PtRh20 established the superiority of the alloys Rh-PtRh20 and, in the second place, IrRh60-Ir, both of which showed a deviation in thermoelectric force of less than 1% after a 100-hour annealing in air at a temperature of 1,800°C. Conclusion: most suitable are platinum-rhodium alloys, with the rhodium content proportional to thermoelectric stability. There are 3 figures and 11 references: 6 English, 3 German and 2 Soviet

Rudnicki B. Economics Effect by the System of Hydro-Electric Power Stations.

"Efekt oszczędności węgla występujący przy wprowadzeniu do ruchu elektrowni wodnych". Przegląd Elektrotechniczny, No. 11, 1957, pp. 483—486, 5 figs., 1 tab.

It has been found that the savings effected by a hydro-electric power station are not confined to economising coal in the production of electrical energy to meet peak demand. The installation of additional power generating units to meeting peak demand and to enable the creation of reserves in the power system, involves lower additional costs in a hydro-electric station than does the extension of a heat power station. Moreover, a hydro-electric station has many other advantages such as a much longer life, negligible periods of interruption in operating caused by damage, less frequent and shorter service stops for overhauls at 3 to 6 times lower overhaul costs, and 2 to 3 times lower amortization norms. Accordingly, the effect of hydro-electric peak power stations relates in the first place to the marked reduction of fixed annual costs. As a result of the introduction of hydro-electric peak power stations, the quality of electrical energy increases, contributing within the framework of the country's all-over power economy to the reduction of fuel consumption and to better utilization of appropriate raw materials.

Rudnicki, J. Results of Seedling Birch in Various Soil Acidities.

"Wyniki siewów brzozy przy różnej kwasowości gleby". Sylwan. No. 8, 1953, pp. 205-209, 2 figs., 2 tabs.

The fact that seedlings of birch (*Betula verrucosa*) frequently fail to thrive, led to the conduct of pot tests at the Forestry Branch of the Forestry Research Institute (IBL). The purpose of the tests was to determine the influence of soil acidity (pH) on germination of seeds and initial development of seedlings. Soils with a pH of from 4 to 7 were used for the tests; the necessary pH was achieved by using a solution of H₂SO₄ and neutralizing with Ca(OH)₂. Full moisture requirements were assured. It was proved that: 1) moisture is not the sole and decisive factor for assuring good germination of seeds; 2) a soil pH of 5 or higher is required for proper seed germination; a pH of more than 6.5 results in a decline of germination; 3) a solution with a pH=6 (the pH of rain water) used for watering soils with a pH of 4 to 5 showed a distinctly neutralizing effect. This is important for initial development of seedlings on acid soils, where the seedling roots meet with a pH=6 even at a depth of 10 cm. This explains why birch seedlings developed well although germination was poor. The development of seedlings is also influenced by the soil pH. Soils with a pH of 5.5 to 6.5 and adequately moist should be selected for nurseries.

ART. TITLE	: Rzehak., No. 23 1958, No. 104553
AUTHOR	: Rudnicki, Jerzy
LAST.	: ...
TYPE	: Stabilizing Influence of Soil Preparation on Stand Condition
PERIOD. NR.	: Las polski, 1958, 20, No. 7, 15-16
ABSTRACT	: The value of soil preparation for the acclimatization and future condition of forest cultures is described. It is emphasized that the method of preparing the soil is reflected in the condition of the stands not only in the initial period but also during all of their lifetimes; this influence does not weaken but is reinforced with time.--M. V.

AUTHOR: Rudnicki, K.

TITLE: Indicated intergalactic absorption in regions of the sky occupied by the largest near and medium distant clusters listed in the catalogue of galaxies and clusters of galaxies by Zwicky-Herzog-Wild

SOURCE: Acta astronomica, v. 13, no. 3, 1963, 165-168

TOPIC TAGS: galaxy, galaxy cluster, galaxy catalog, galaxy cluster catalog, intergalactic obscuration/open cluster, open galaxy cluster, medium compact cluster, medium compact galaxy cluster, compact cluster, compact galaxy cluster, universal redshift, near-cluster, medium distant cluster, distant cluster, very distant cluster, small cluster, spectral redshift, spectral line, spectral line redshift, universal spectral line redshift, galaxy classification, galactic structure, galaxy structure

ABSTRACT: The following test was made as a check for the presence of intergalactic obscuration which Zwicky found to be associated with large and richly populated clusters of galaxies. The total number of very distant clusters in all respective fields in which the largest clusters of a given structural type and given distance

Card 1/32

ACCESSION NR: AP3012280

(especially near and medium distant clusters) are found was considered. The Zwicky-Herzog-Wild catalogue was used as a source. A diagram (Enclosure) was prepared showing the fifteen largest clusters in the catalogue, including 5 open, 5 medium compact and 5 compact. Enclosure shows that both the three largest near and the three largest medium distant clusters of the three respective structural types are located in fields which are poor in very distant clusters. Five out of six lie in fields in which the number of very distant clusters is smaller than the average of 7.1 per field. The results tend to confirm the findings of Zwicky that large near and medium distant clusters contain enough intergalactic dust and that they cover large enough fields so as to dim the light coming from more distant galaxies and in this way decrease appreciably the identifiable number of very distant galaxies. No systematic error is responsible for this effect. Orig. art. has 1 figure and 1 table.

The proportion of spinal tumours to cerebral tumours in 114 personal cases was 1 to 10. In the classification of Elsberg and Kernohan, meningiomas and neurofibromas constitute 42% of all spinal tumours. Surgical treatment leads to either recovery or improvement in about 75% of cases.

Papilloedema in cases of tumours of the spinal cord Neurol. Neurochir. Psychiat. polska
1951, 1/1 (49-54)

Papilloedema was observed in a woman with neurilemmoma of the roots of the spinal nerves pressing on the medulla at the level of the 3rd dorsal vertebra. After the removal of the neoplasm the papilloedema subsided and the patient has been completely well for the last 2 yr. after operation. It is considered that hydrocephalus and consequently papilloedema of the optic nerves occurs in cases of tumours of the spinal cord because of the closing of the spaces, where CSF is absorbed. In such cases a part of the CSF, which is, following the author, normally absorbed by the meningeal sac of the medulla collects in excessive quantity within the cranium. It may be too, that the increase of intracranial venous blood pressure is due to the pressure of the plexus of spinal veins.
