Title : The Acclimatization of Chinese Peaches in Kiev. (Akklimati-  
zatsiya kitayskikh persikov v usloviyakh Kiyeva).

Orig Pub: Tr. Botan. Sada. AN USSR, 1957, 4, 20-25.

Abstract: The three year old Chinese peach seedlings in the Botanical Garden of the Academy of Sciences Ukrainian SSR withstood a very severe winter in 1953/54 when the soil froze through to a depth of 1.5 meters. The most hardy of these bore fruit in 1954 and 1955. The fruits differed both in ripening time (from the beginning of August to the end of September) and in other characteristics. Late ripening forms with dense pulpy flesh

TITLE: On a Method of Computing the Nominal Wind Velocity for the Forecasting of the Wave Regime of Water Reservoirs (O metodike vychisleniya raschetnoy skorosti vetra dlya prognoza volnovogo rezhima vodokhranilishch)

PERIODICAL: Tr. Gidravl. labor. Vses. n.-i. in-t vodosnabzh., kanaliz., gidrotekhn. sooruzh. i inzh. gidrogeol., 1957, Nr 6, pp 87-94

ABSTRACT: The dimensions of the wind waves depend upon the wind velocity and the fetch. A.P. Braslavskiy (Tr. Gos. gidrol. in-ta, 1952, Nr 35) recommends that the nominal wind velocity be computed from the standard observations of continental meteorological observatories with the inclusion of two coefficients accounting for the height of the measuring device and the peculiarities of the respective locale. The authors recommend an additional coefficient K which takes into consideration the effect of the surface of the reservoir and its dimensions in the direction of the wind flow (i.e., the fetch) on the change in the wind velocity. The relationship between the K coefficient and the

Card 1/2

On a Method of Computing the Nominal Wind Velocity (cont.)

wind fetch is derived from comparative records of wind-velocity observations taken for periods of many years at different meteorological observatories prior to and after filling of nearby water reservoirs; K is always greater than unity; with a fetch of 100 km,  $K = 1.4$ . TITLE: The transformation of equations of motion of holonomic systems with multiple links in the presence of forces proportional to the pulses

CITED SOURCE: Nauchn. tr. Tashkentsk. un-t., vyp. 222, 1963, 92-98

TOPIC TAGS: holonomic system, equation of motion, canonical equation of motion, multiple bonded holonomic system, excess coordinate, potential force, resistance force, proportional force pulse

TRANSLATION: It is assumed that the bond attached to the holonomic mechanical system are given by the equations

$$f_{\mu}(t, q_1, q_2, \dots, q_n) = 0 \quad (\mu = 1, 2, \dots, m) \quad (1)$$

Card 1/2

L 24162-65

ACCESSION NR: AR5000984

0

between some independent general coordinates  $q_1, q_2, \dots, q_k$  ( $k=n-m$ ) (referent's definition) and dependent variables  $q_{k+1}, q_{k+2}, \dots, q_n$ , taken as "excess" (superfluous) coordinates of the system (in the text of the paper all the "n" variables satisfying the bond equations are inaccurately called excess coordinates). Then the bond equations are differentiated to obtain the ratio (2) between independent general velocities and excess velocities; excess pulses appear, corresponding to the latter. It is assumed that not only potential forces act on the system, but also resistance forces, proportional to all pulses, including the excess pulses. The equations are set up in canonical form for a holonomic, non-conservative system, with consideration of the indicated resistance forces and also with the excess terms. No example is presented of either mechanical or formal content illustrating the usefulness of leaving the excess coordinates in the differential equations of motion of the system. V. Dobronravov

TITLE: The Most Important Tasks of the Statistics of Capital Construction. (Vazhneyshiye zadachi statistiki kapital'nozo stroitel'stva.)

PERIODICAL: Vestnik statistiki, 1959, Nr 3, pp 24-33. (USSR)

ABSTRACT: The author lists the tasks and problems faced by Soviet statistics in the field of capital constructions planned for the period 1959-1965. There will be twice as much capital investment as during the past seven years, including the building of 140 new chemical plants and the reconstruction of 130 now existing, 1.7 times more electric plants capacity than was obtained from the electric plants built in 1952-1958, 15 million housing apartments. He points out that a clear and comprehensible methodology of capital construction statistics must be worked out and clear instructions for setting up the records must be given. Statistical organs must

TOPIC TAGS: insecticide, tick, entomology

ABSTRACT: The insecticide sevin (1-naphthyl-N-methyl carbamate), which has been developed in the USA and is being produced in the USA and Western Europe, has been tested in the USSR. Laboratory and field tests indicated that sevin has a high effectiveness against the larvae, nymphs, and imagoes of *Ixodes persulcatus*. P. Sch. ticks. The field tests, which were conducted in Perm'skaya Oblast', also showed that sevin lowered considerably the number of insects of the families Coccinellidae, Braconidae, and Chalcididae, while exhibiting almost no activity with respect to Staphylinidae and Icheumonidae. It had an insecticidal effect on pests of the families Elateridae, Chrysomelidae, Curculionidae, Chloropidae, and some others. Laboratory tests showed that it had low systemic activity against *Xenopsylla cheopis* fleas infesting white mice: after sevin dissolved in vegetable oil had been given perorally to the mice in a dose of 500 mg/kg, 37.5% of the fleas died. The author thanks the head and workers of the Perm'

Antiepidemic Detachment, Ministry of Health RSFSR (headed by Candidate of Biological Sciences S. A. Shilova) for assistance in the work. The author further thanks Senior Scientific Collaborator of GosNIIG, M. B. Azar'yan for providing the compounds. Orig. art. has 3 tables. /LJESS/

TITLE: Constructive Properties in the Use of Printing Telegraph Receiver in Digital Measuring Systems

PERIODICAL: Priborostroyeniye, 1960, No. 1, pp. 4 - 6

TEXT: This paper deals with the use of industrially produced digital printing apparatus for remote measurement systems. Good results were obtained by using telegraph receivers. The authors discuss block diagrams of digital measuring systems combined with a telegraph receiver. The starting circuit for the telemetric telegraph receiver which is necessary in these circuits, is described in detail. Also a diode system is described which converts the informations given in the decimal system into the five-place telegraphy code. Furthermore, the authors discuss the circuit of a telemetric device in which an CT-35 (ST-35) apparatus is used as distributor. This circuit counts pulses in the places of hundreds,

TITLE: Automatic Bridge Telemetering Meteorological Station (ATMS-M)

SERIAL: Glavnaya geofizicheskaya observatoriya. Trudy, no. 103, 1960.  
Voprosy razrabotki meteorologicheskikh priborov, 10-31

TEXT: An experimental bridge-type automatic telemetering meteorological station (mostovaya avtomaticheskaya teleizmeritel'naya meteorologicheskaya stantsiya -- ATMS-M) has been developed at the Main Geophysical Observatory im. A. I. Voyeykov. It is covered by author's patent certificate No. 125916, dated 22 May 1959, issued to V. Petrov, A. M. Bogomolov, and Ye. N. Shadrina. It is designed to play a fundamental role in the thoroughgoing automation of the national hydrometeorological network, an object regarded by Soviet meteorologists to be of great importance and urgency. The ATMS differs basically from other automatic telemetering stations in that it uses a bridge-type coordinating and coding device (mostovoye koordinatno-kodiruyushcheye ustroystvo -- MKKU), but it also incorporates a number of other significant innovations. This version operates on electromechanical principles, but it could also be made contactless. Fig. 1 is a functional diagram of the ATMS. The operations

/c

Card 1/2

Automatic Bridge Telemetering Meteorological  
Station (ATMS-M)

S/531/60/000/103/001/002

involved in automatic measurement, conversion, transmission and relaying of meteorological information are symbolically described. The ATMS consists of seven principal units: a univibrator (Fig. 2); a sweep device for the commutator system (Fig. 3); the commutator system (Fig. 4); the bridge-type coordinating and coding apparatus (MKKU) (Fig. 5); the coding network; a sweep reading device (Fig. 9); and a counter (Fig. 10). The layout of the ATMS as a whole is shown in a large foldout (Fig. 7). The function of each unit is briefly described, followed by a description of the sequence of operation of the units. A highly detailed description is provided for the MKKU and several other units. Special sections deal with: the coding cycle for the transmission of the readings from the individual measuring instruments; the length of time required for performance of various operations; the accuracy of coding and the reliability of station operation; and the possibilities of automated storage of meteorological information on punched cards. There are 10 references: 8 Soviet, 1 German, and 1 English.

TITLE: Precipitate Formation in Fuels for Gas Turbine Engines (Osadkoobrazovaniya v toplivakh dlya gazoturbinnnykh dvigateley)

PERIODICAL: Khimiya i Tekhnologiya Topliva i Masel, 1957, No.7, pp. 57 - 63 (USSR)

ABSTRACT: The importance of thermal stability of fuels for aero gas turbine and jet engines with increasing speed of flying and literature data on the problem of testing and thermal stability of fuels are briefly discussed. In 1954, the authors developed a method for simultaneous determination of the corrosive activity and the susceptibility of fuels to resin and precipitate formation, which during the two-and-a-half years proved suitable for the evaluation of many fuels of various origin. In this method, a fuel in contact with a freshly polished surface of antimony bronze is submitted to a temperature of 120 °C for 6 hours. The surface area of bronze is 20 cm<sup>2</sup>/100 ml of fuel. During the test, the fuel is moving with a velocity sufficient for equalising concentrations of reacting substances (Ref.12). The following factors are determined in the test: the loss of weight of the metal, the amount of resins adhering to the surface

Card 1/3

Precipitate Formation in Fuels for Gas Turbine Engines 65-7-11/14

purification, metals from storage vessels; dust which finds its way into the fuel during transport and storage. As nearly all processes of the formation of insoluble in fuel precipitates take place in oxidising medium, and the composition of precipitate is characterised by a high content of oxygen, it can be assumed that by preventing or minimising the supply of oxygen to fuels, the velocity of the formation as well as the total amount of precipitates formed can be decreased, thus increasing the thermal stability of fuels. There are 3 tables and 13 references, 3 of which are Russian, 8 English and 2 German.

TITLE: The Corrosive Activity of Hydrocarbon Fuels in the  
Presence of Elementary Sulphur. (Korroziynaya akti-  
vnost' uglevodородnykh topliv v prisutstvii element-  
arnoy sery).

PERIODICAL: Khimiya i Tekhnologiya Topliv i Masel, 1958, Nr.7.  
pp. 62 - 66. (USSR).

ABSTRACT: By using radioactive indicators, the authors found that  
the formation of a layer on metal is not due to  
adsorption, but to chemical interaction the elementary  
sulphur penetrates into the metal. Investigations on  
the changes of the metals in fuel mixtures under the in-  
fluence of elementary sulphur and oxygen were carried out  
to define the character of occurring processes. Bronze  
was used as the investigated metal, and white spirit  
as the hydrocarbon mixture. The absorption of oxygen by  
the fuel was measured at 125°C, at normal pressure  
according to the PK method (Ref.6). The corrosion of  
bronze and the quantity of deposits formed on the metal  
in fuel mixtures to which elementary sulphur had been added  
was also determined at 120°C during six hours (Ref.7).

Card 1/2

SOV/ 15-72-7-10/12

The Corrosive Activity of Hydrocarbon Fuels in the Presence of Elementary Sulphur.

Fig.1: A graph giving curves of the oxidation of white spirit. When white spirit was oxidised in the presence of elementary sulphur (concentration = 0.001 - 0.01%), when not in contact with bronze, it was seen that elementary sulphur acted in all cases as a strong anti-oxidant; the induction period = 300 minutes. During these oxidations it was found that the polished surface of the bronze showed definite catalytic activity. When the bronze surface was covered with a layer of cupric oxide or cuprous sulphide no catalytic activity could be observed. When elementary sulphur is contained in the fuels in quantities of 0.002 - 0.003% and higher, considerable corrosion occurs and precipitates are formed which penetrate into the fuel and cause accumulation of hard deposits. There are 4 Figures and 7 References: 4 English and 3 Soviet.

Academiya nauk SSSR. Mashinostroyeniye, Dnie  
Khimiya sverkhochisticheskikh sovremennoy, modernizatsionnoy i nertnykh i  
sferokhromatov (seriya III petrokhimicheskii) (Khimiya of sulphur  
organic compounds contained in petroleum and petroleum products; [papers of the  
Third Scientific Session]) Moscow, Izd-vo AN SSSR, 1959. 376 p.  
2,000 copies printed. Strata etly inserted.

Editorial Board: R.D. Obolentsov (Resp. Ed.) Doctor of Chemical Sciences;  
G.P. Gal'pern, Doctor of Chemical Sciences; Ya. B. Chernikov, Doctor of Technical  
Sciences; V.V. Ponor, Candidate of Technical Sciences; and V.P. Khorostvennik,  
Candidate of Chemical Sciences; Ed. of Publishing House: I.I. Brumov  
Tech. Ed.: T.P. Polonova.

PURPOSE: This book is intended for chemists, chemical engineers, and technicians  
specializing in the chemistry of petroleum.  
CONTENTS: The book is a collection of papers presented at the Third Scientific  
Session on the Chemistry of Organic Sulfur- and Nitrogen Compounds Contained  
in Petroleum and Petroleum Products. The scientific session was held in Ufa,  
June 3-8, 1957. The book consists of the following: 1) Synthesis, charac-  
terization, and analysis of organic sulfur compounds in petroleum and petroleum  
products; 2) Transformation of organic sulfur compounds by thermal catalysis;  
3) Corrosive properties of organic sulfur compounds and hydrogen  
and petroleum products; 4) Physical properties of organic sulfur compounds, their  
separation and purification; 5) Uses of organic sulfur compounds and hydrogen  
and petroleum products. There are 315 references, of which 179 are Soviet,  
118 English, 5 French, 12 German, and 1 Czech.

TITLE: Electron microscope investigation of changes occurring  
during the heating of S-containing compounds dissolved  
in middle fractions of Volga-region petroleum fuels

PERIODICAL: Zhurnal prikladnoy khimii, v. 35, no. 2, 1962, 394-397

TEXT: The authors studied the formation of a solid phase as the  
result of heating middle cuts of petroleum fuels rich in organic S  
compounds. This was done to investigate the thermal stability of  
such fuels. Samples of a standard fuel TC-1 (TS-1) were desulphur-  
ized and then treated with the individual mercaptans, sulphides,  
disulphides, thiophanes and thiophenes, normally found in Volga-re-  
gion fuels, and also with sulphur-rich concentrates isolated from  
the latter. The compounds were added in quantities equivalent to  
up to 0.01% of mercaptanic S and up to 0.25% S for the rest. The  
solutions were examined under an electron microscope for the pre- ✓

TITLE: Flow birefringence in solutions of desoxyribonucleic acid.  
I. Optical anisotropy in molecules of native and aggregated denaturated desoxyribonucleic acid

PERIODICAL: Vysokomolekulyarnyye soyedineniya, v. 4, no. 5, 1962,  
762 - 768

TEXT: The denaturation of desoxyribonucleic acid (DNA) was studied with the aid of flow birefringence. The sodium salt of DNA from the thyroid gland of calf (12.63% L, 7.37% P; N/P = 1.71; E(p) = 6500) was investigated in an optical device with a penumbral compensator (0.0232  $\lambda$ ).  $\Delta n$  and  $\alpha$  were determined as functions of the velocity gradient  $g$  of the DNA solutions. The relation  $(\Delta n / gc \eta)_0_{q \rightarrow 0} = f(c)$  shows that in solutions of native and aggregated denaturated (100°C) DNA,  $[\eta]$  changes by a factor of 115, and by a factor of 16. The optical anisotropy of the DNA macromolecule is

Card 1/3

Flow birefringence in solutions of ...

S/190/62/004/005/022/026  
B110/B108

scattered by native DNA solutions. On the basis of the mean square distance  $R^2$  between the chain ends, the convolution in the native DNA molecule was found to be  $\lambda = L/\sqrt{R^2} \approx 5$ . As the lengths of the segments, determined optically and geometrically, differ considerably, further investigations are necessary. There are 3 figures and 1 table. The most important English-language reference is: J. D. Watson, F. H. C. Crick, Nature, 171, 964, 1953.

TITLE: Hydrodynamic behavior of nucleic acid molecules in solutions of varying ionic strength

SOURCE: Biokhimiya, v. 31, no. 5, 1966, 1027-1032

TOPIC TAGS: nucleic acid, biochemistry, molecule behavior, physical chemistry, DNA

ABSTRACT: Characteristics viscosity and the dynamic optical constant have been measured for calf thymus DNA as functions of the ionic strength of the solution. Viscosity of native DNA markedly increases with decreasing ionic strength. The data suggest that the size and rigidity of native DNA molecules both increase with decreasing ionic strength of the solution.

TITLE: Simulation of particle motion in crossed electric and magnetic fields

SOURCE: IVUZ. Fizika, no. 3, 1964, 3-6

TOPIC TAGS: accelerator magnetic field, particle accelerator, cyclic accelerator, analog computer, particle trajectory

ABSTRACT: The crossed fields in question arise when it is desired to compensate for the effect of the stray magnetic field on injected particles by applying an electric field. Since the action of the crossed field is difficult to evaluate analytically, the particle motion was simulated with the aid of an IPT-5 analog computer. Both electric and magnetic fields are variable along the direction of motion of the particles. The choice of the scale factors, initial con-

Card 1/5

ditions, and transfer coefficients is discussed. Attempts to improve the output parameters of the particles by varying the distribution of the electric field are described. The analog computer was also used to determine the tolerances for the stability of the electric field and the particle energy. These were found to be  $\pm 0.5\%$  for the energy and  $\pm 0.1\%$  for the field. Trajectories of the particles which have different initial conditions at the input are determined. It is noted in conclusion that in spite of the errors due to the instability of operation of the analog computer elements, it is possible to rapidly obtain with the computer data on both the particle parameters and on the optimal input unit parameters. Orig. art. has: 4 figures, 4 formulas, and 2 tables.
