TITLE: Determination of the Inductance of the Armature Winding
of a d.c. Machine (Opredeleniye induktivnosti obmotki
yakorya mashin postoyannogo toka)

PERIODICAL: Vestnik Elektropromyshlennosti, 1958, Vol 29, Nr 5,
pp 22 - 24 (USSR)

ABSTRACT: This article supplements one published in Elektrichestvo
1948, Nr 11. It examines the component of the armature winding
inductance L_{al} which is due to flux-linkage of the armature
winding flux. Other components of the armature winding and
commutating-pole inductances can be calculated by available
formulae.

Experimental investigation of the total inductance of the
armature circuit is described. An electric motor, type PN-68,
220 V, 50 A, 2 200 r.p.m. was used. The change in the total
inductance of the armature circuit L_a of a d.c. machine
during transient processes depends on eddy currents in the
solid parts of the magnetic circuit and on the value of the
flux in the main poles. An experimental study of the relation-
ship between L_a and the flux in the main poles was made by

Card 1/3

Determination of the Inductance of the Armature Winding of a d.c.
Machine

oscillograms taken of rising and falling currents with the armature locked and various values of field current. Oscillograms of the increase and decrease of current are given in Figures 1 and 2, respectively. In each case, curves are shown for various field currents. The total inductance of the armature winding with commutating poles is related to the armature current by means of the current decrease oscillogram and is plotted in Figure 3.

A new method of determining L_{al} is proposed; it is based on experimental determination of the armature reaction cross-flux. The experimental procedure is described. The results of reaction cross-flux measurements for various steady current values with a locked armature are tabulated. It will be seen that for the motor in question, with a steady armature current of 185 A, the reaction cross-flux heavily saturates certain parts of the magnetic circuit. The magnetising force of the main poles does not affect the final value of the cross-flux, as is confirmed by the experimental results given in Figure 3. This point is of

Card2/3

110-58-5-7/25

Determination of the Inductance of the Armature Winding of a d.c.
Machine

importance and the proposed method of determining L_{al} is based on it. The formulae used in the calculation of the inductance are derived. In order to determine L_a by the method it suffices to determine experimentally the armature reaction flux for the appropriate pole arc and the corresponding steady total armature current. There are 5 figures, 1 table and 3 references, 1 of which is Soviet and 2 English.

SOV/105-59-7-23/30

AUTHOR: Shil'diner, L. M., Candidate of Technical Sciences (Moscow)

TITLE: Electromagnetic Vibrator With 1500 Vibrations per Minute
(Elektromagnitnyy vibrator na 1500 kolebaniy v 1 min)

PERIODICAL: Elektrichestvo, 1959, Nr 7, pp 83 - 84 (USSR)

ABSTRACT: An electromagnetic vibrator (Fig 1) with a power output of 3.1 - 3.5 kva (real power 0.64 - 0.72 kw) and a weight of 65 kg is described. It warrants 1500 vibrations per minute with an armature-amplitude of 10 mm. The vibrator is used for the sorting out of grain. Figure 2 shows an oscillogram illustrating the variation of the current in the coil of the electromagnet which is connected in series to the net with the device for contactless breaking of the current. The contactless current-breaker allows the current to pass from the mains to the electric circuit only during one mains current period, and interrupts it during every following period. The number of breaks is 1500 per minute. The mode of action of the contactless circuit breaker is described. It consists of an induction coil and a capacitor which form an oscillatory circuit. The inductivity of the induction coil varies periodically between

Card 1/2

Electromagnetic Vibrator With 1500 Vibrations per Minute SOV/105-59-7-23/30

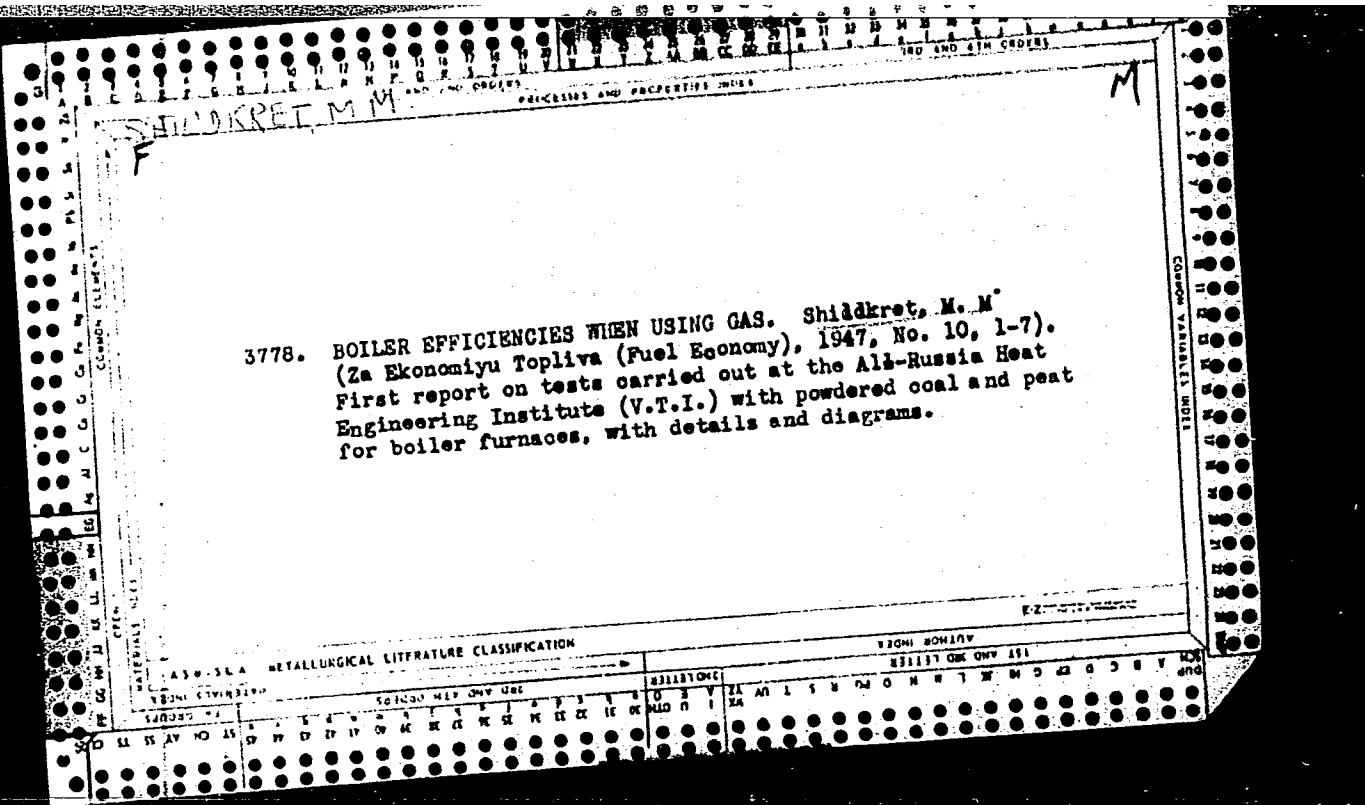

two limits. The system of the vibrator drive operates with the greatest economy if the current resonance occurs at the lowest inductivity, also if, for this purpose, capacity must be considerably increased. Figure 4 shows an oscillogram of the vibration of a vibrator frame for the sorting out of grain. There are 4 figures and 3 references, 2 of which are Soviet.

The utilization of miniature semifinished products for the construction of modular assemblies would result in an increase of assembly compactness from 1.5-2 elements to 4-5 elements per cm³. Fig. 1 shows a converter-stabilizer containing two Д-9 diodes, two Д-808 diodes, five П-13 transistors, and eight МЛТ-0.25 resistors. Fig. 2 shows the modular assembly of a modulator and demodulator containing two Д-808 diodes, four П-13 transistors, and three МЛТ-0.25 resistors. Both functional blocks are simple to build and adjust. Each has two printed plates which differ from those of the other in the design of their printed circuits. [DW]

TITLE: Emission of single pulses of coherent light by a two-component medium with negative absorption

SOURCE: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 48, no. 3, 1965,
845-849

TOPIC TAGS: coherent light, negative absorption, pulsed laser, ruby laser, air breakdown

ABSTRACT: Stimulated emission is studied in a medium containing two types of quantum emitters with identical energy transitions in a Fabry-Perot resonator. When the relationship between parameters reaches a certain value, this type of medium emits single pulses of light. The shape, amplitude, energy and duration of the pulses are theoretically determined. Emission of this type was experimentally observed in a two-component medium consisting of a cylindrical ruby single crystal 75 mm long with a Cr-concentration of 0.05%, and a plane-parallel plate of KS-19 glass 3 mm thick located in a resonator with mirrors having transmission factors of 0 and 30%. Pumping was done by pulse discharge of a 1600-joule capacitor bank through two IPF-800 tubes. The emitted pulse had a duration of 70-

Card 1/3

L 1074-66

ACCESSION NR: AP5008742

3

-80 nanoseconds and a total energy of 0.08-0.1 joule, which corresponds to an amplitude of about 1.0-1.4 Mw. An increase in the pumping level or a reduction in the thickness of the glass causes a repeat performance of the entire phenomenon with two more pulses separated by an interval of about 70 μ sec. The emitted pulse was amplified in a ruby single crystal 240 mm long with coated end surfaces, pumped by two IPF-5000 tubes with a total flash energy of 5400 joules. The output pulse had an amplitude of about 10-14 Mw. When this light was concentrated by a lens with a focal length of 130 mm, an intense electric breakdown was observed in the free air. Experiments of this type using KS-17^{1/2} and KS-18 glass showed similar results with somewhat weaker energies and amplitudes. The light transmission factor for KS-19 glass is strongly dependent on the intensity of the incident light (see fig. 1 of the Enclosure). The results of the experiment are ambiguous, and a special analysis will be required to determine whether the theoretical mechanism proposed in the paper is applicable to the experiment described.

TITLE: Nonlinear negative absorption of resonance light in ruby and neodymium
glass

SOURCE: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 49, no. 6, 1965,
1718-1722

TOPIC TAGS: ruby laser, solid state laser, neodymium glass, laser pulsation,
resonance absorption, light absorption

ABSTRACT: The purpose of the experiment was to obtain a quantitative comparison
of the calculated drop in the negative light absorption induced in a ^{laser}₂₃ by a
resonance signal, and the experimental drop observed in ruby and neodymium glass.
The materials tested were a ruby sample with 90° orientation, 0.05% Cr ions, and
bleached end surfaces, and glass with about 4% neodymium ions. The pumping was
done with high-intensity flash lamps in both cases, and the input and output light
pulses were recorded with photocells and an oscilloscope.

Card 1/2

L 14628-66
ACC NR: AP6002709

The results show that propagation of a monopulse from a laser and the distortion of the pulse waveform during the propagation cause negative absorption of the resonance light in ruby single crystals as well as in neodymium glass, and the degree of nonlinearity of the negative absorption and the distortion of the pulse waveform can be readily determined from the deviation of the oscillogram from a straight line. The agreement between theory and experiment is regarded as satisfactory. "The authors are grateful to N. Al'tshil', Yu. Romanov, V. Trukhan, and A. Uits for participating in the experiment." Title : Effectiveness of Fertilization Systems in Crop Rotation

Orig Pub : S. kh. Bashkiril, 1957, № 8, 7-10

Abstract : The paper is based on the results of tests, carried out during several years on the test field in Ufimsk and also on the registration of production experiences of kholkhozes and sovkhozes. The Bashkirian State Institute of Rural Economy recommends for kholkhozes and sovkhozes with transitional forest-steppes a model fertilization system with an 11-fold crop rotation, which has provided a high standard of nourishment in the crop rotation: bare fallow, grainy, perennial grasses. It also provides an application of bacterial fertilizers: nitrogen-bacteria under winter rye and phosphorus-bacteria under spring wheat. Under these conditions,

Editor: A. M. Matlyuk.

Editor: This collection of articles is intended for spectral analysis labor-
atory workers at ferrous and nonferrous metallurgical plants, oil and gas lab-
oratory personnel of the metal-working industry, geological and prospecting
organizations, and similar scientific research laboratories.CONTENTS: The collection contains papers read at the Second Urals Conference
on Spectroscopy, held in Sverdlovsk, April 1959. The conference included
analyses, spectrographs, refractories and other materials used in indus-
try, the material of the conference includes articles on the analysis
of steels (including the determination of sulfur), refractories, nonfer-
rous and noble metals and alloys, pure noble metals, etc. The present
volume is intended to disseminate the latest experience in working with
spectral instruments, and to report on the results of scientific re-
search. The author thank A. I. Butina and Yu. M. Buravlev. Almost all
of the articles are accompanied by references.

Title : Characteristics of aerodynamic phenomena in dust-measuring devices

Periodical : Vest. AN Kaz. SSR, 11/3 (108), 66-73, Mar 1954

Abstract : An experimental study of dust-measuring devices is presented. Experiments were conducted to determine: 1) pump piston-speed at the moment of initial suction; 2) vacuum magnitude; 3) dependence of the air flow-speed on the vacuum magnitude in the air flow-type dust-measuring devices; and 4) the dynamic characteristics of the air flow-speed in a slot. Illustrations; graphs.

TITLE: Use of Celluloid Strips instead of covering glass in Microscope Investigation of Dust Samples ("primenenii pri mikroskopirovaniu pleyvykh prob tselluloidnykh polosok vmesto pokrovnykh stekol").

PERIODICAL: Zavodskaya Laboratoriya, 1958, Vol. 24, Nr 1, pp. 113-113 (USSR)

ABSTRACT: In a previous work by Stogniy [Ref. 1] it was suggested to use celluloid strips instead of glass plates when taking samples of dust by means of a dust-counter. In this paper this suggestion is described as unsuitable for the following reason: A celluloid strip is elastic and is able to vibrate as a result of the motion of air when taking dust samples, which is of disadvantage; if such a celluloid strip is used together with a glass plate as a base, results obtained by means of a dust-counter are higher by 40% (according to the table): as the taking of dust samples in the dust counter depends upon the formation of condensation moisture, and as celluloid is not able to absorb the same quantity of moisture as glass, the dust does not adhere so well to celluloid

Card 1/2

Use of Celluloid Strips instead of covering glass in Micro-
scope Investigation of Dust Samples

32-1-49/55

as to glass. Moreover, celluloid is easily damaged, which may disturb work. A further disadvantage of celluloid strips consists in the fact that they are apt to bend during the process of dust counting, by which focusing may often be disturbed, which causes a loss of time. There are 1 table, and 3 Slavic references.

Pathological examination of child mortality from 1949 till 1953. Suvrem. med., Sofia 7 no.8:3-7 1956.

1. Iz Katedrata po patologija i patologichna anatomiia pri VMI I.P. Pavlov-Plovdiv. (Zav. katedrata: prof. A. Prodanov).
(VITAL STATISTICS
mortality of child. in Bulgaria)

KILIMOV, N.; SHILEV, P.

A case of Pancoast-Tobias syndrome. Suvrem. med., Sofia 8 no.9:102-106
1957.

1. Iz klinikata po nervni bolesti pri VMI "I. P. Pavlov"-Plovdiv
Zavezhdashch: prof. Tr. Zaprianov Katedrata po patologichna anatomia
pri VMI "I.P. Pavlov" - Plovdiv Zavezhdashch: prof. As. Prodanov.
(PANCOAST SYNDROME, case reports)

SHILEV, P.

Effect of glucocorticoid hormones and ACTH on the development
of tuberculous processes. (Experimental morphological studies.).
Suvrem. med., Sofia 11 no.2-3:16-22 '60.

1. Iz Katedrata po patologichna anatomiia pri VMI -I.P.Pavlov* -
- Plovdiv.
(ADRENAL CORTEX HORMONES pharmacol.)
(CORITCOTROPIN pharmacol.)
(TUBERCULOSIS exper.)

SHILEV, P.G. (Bulgariya)

Histopathology of synapses in human solar plexus ganglia. Biul.
eksp. biol. i med. 57 no.5:108-112 My '64.
(MIRA 18:2)
1. Laboratoriya nevrologistologii imeni Lavrent'yeva (zav. - prof.
Ye.K.Plechkova) Instituta normal'noy i patologicheskoy fiziologii
(dir. - deystvitel'nyy chlen AMN SSSR prof. V.V.Parin) AMN SSSR,
Moskva. Submitted May 10, 1963.

SHILEVSKAYA, D. M., Doc of Med Sci -- (diss) "Electrocardiographic Changes in Children Sick with Rheumatism," Leningrad, 1959, 27 pp (Leningrad Pediatric Medical Institute) (KL 4-60, 123)

SHILEVSKAYA, D.M.

Electrocardiographic changes and their significance in rheumatic fever
in children. Vop. okh. mat. i det. 4 no. 4:18-25 Jl-Ag '59.

(MIRA 12:12)

1. Iz kafedry propedevtiki detskikh bolezney (zav. - prof. A.B. Volovik)
Leningradskogo meditsinskogo pediatriceskogo instituta (dir. - prof.
N.T. Sautova).

(RHEUMATIC FEVER)

(ELECTROCARDIOGRAPHY)

MEDVINSKAYA, V.I.; SHILEVSKAYA, I.L.

Genesis of aggravation in dysentary. Vop.ohk.mat.i det. 8 no.3:
22-26 Mr '63. (MIRA 16:5)

1. Iz Detskoy infektsionnoy vol'nitsy (glavnnyy vrach K.A. Dudkina;
nauchnyy rukovoditel' - kand.med.nauk I.L. Gusarskaya) Leninskogo
rayona Leningrada i Leningradskogo instituta detskikh infektsiy
(dir. - prof. A.L. Libov).
(DYSENTERY)
